The New Jersey Register Government Inst

This report presents the findings and recommendations on the evaluation of High Density

Polyethylene (HDPE) Pipe resulting from a 1996 Transportation

Enhancement/Hazard Elimination Project in Martin, South Dakota. This

was the first project where HDPE pipe was allowed to be installed under a state highway in South Dakota.

Department researchers installed instrumentation and conducted deflection

testing on a 760 mm (30 in) HDPE pipe installed under US Highway 18 in Martin, South Dakota. A horizontal inclinometer probe was used to determine vertical heave or settlement. Surface profiles were monitored with a Dipstick® Floor Profiler. Thirteen separate sets of measurements were taken between August 1996 and June 1997. Costs were determined for installation and delivery of both HDPE pipes and reinforced concrete pipes (RCP). Neighboring states were surveyed to determine their costs for storm sewer pipes as well as specifications for installing HDPE pipes. Recommendations were made to allow the installation of HDPE pipe based on information received from the state survey, literature reviews, and the results of the Martin, South Dakota Project.

Engineered Materials Abstracts
 Trenchless technology allows for the installation or renewal of underground utility systems with minimum disruption of the surface. As water and wastewater systems age or must be

redesigned in order to comply with environmental regulations, the demand for this technology has dramatically increased. This is a detailed reference covering construction details, design guidelines, environmental concerns, and the latest advances in equipment, methods, and materials. * Design and analysis procedures * Design equations * Risk assessment * Soil compatibility and more

The evaluation and use of plastics in the construction industry are explained. The contributors offer extensive, timely, and thoroughly researched data on the chemistry, properties, functions, engineering behavior, and specific applications of plastics to building requirements. The major subjects discussed in depth are--(1) the role of plastics in construction, (2) the plastic materials, (3) building codes and regulations, (4)

construction aids, (5) structural fiber-glass reinforced plastics, (6) reinforced plastic shell structures, (8) paints, sealants, flooring, and roofing, (9) plastic for walls and doors, (10) plastic foams in thermal insulation, (11) pipe and plumbing, (12) utilities, (13) lighting, (14) permanent fixtures, and (15) the use of plastics in other countries. (Tc)
