 RMarkdown¶. RMarkdown
 is a variant of Markdown
 that makes it easy to
 create dynamic
 documents, presentations
 and reports within
 RStudio. It has embedded
 R (originally), python,

perl, shell code chunks to be used with knitr (an R package) to make it easy to create reproducible reports in the sense that they can be automatically regenerated when the underlying code it modified.

7. R for Reproducible Scientific Analysis (RMarkdown ...knitr.

The R package knitr is a general-purpose literate programming engine, with lightweight API's designed to give users full control of the output without heavy coding work. It combines many features into one package with slight tweaks motivated from my everyday use of Sweave. See the package homepage for details and examples. See FAQ's for a list of frequently asked questions (including ...knitr package | R Documentationknitr for embedded R code. The knitr package extends the basic markdown syntax to include chunks of executable R code.. When you render the report, knitr will run the code and add the results to the output file. You can have the output display just the code, just the results, or both. To embed a chunk of R code into your report, surround the code with two lines that each contain three

backticks.

Introduction to R Markdown10.1.1

Supported table formats. In most cases, `knitr::kable(x)` may be enough if you only need a simple table for the data object `x`. The format argument is automatically set according to the knitr source document format. Its possible values are `pipe` (tables with columns separated by pipes), `simple` (Pandoc's simple tables), `latex` (LaTeX tables), `html` (HTML tables), and `rst` (reStructuredText ...10.1

The function `knitr::kable()` | R Markdown CookbookAh, R Markdown. I love teaching R Markdown. But this was not a love at first sight story. When I first started teaching with R at Oregon Health & Science University many moons ago, my students used R Markdown for their homework assignments and in-class labs. This is a great way to start for beginners, to be honest- just use it!

How I Teach R Markdown | Alison Hill

Define knitr options for an R Markdown output format that creates HTML output. `knitr_options_html` (`fig_width`, `fig_height`, `fig_retina`, `keep_md`, `dev = "png"`) ArgumentsKnitr options for an HTML output format - R

Markdown3.4 Convert R Markdown to R script.

When you want to extract all R code from an R Markdown document, you can call the function `knitr::purl()`. Below is a simple Rmd example with the filename `purl.Rmd`:---

```
title: Use `purl()` to extract R code---
```

The function `knitr::purl()` extracts R code chunks from a `**knitr**` document and save the code to an R script.

3.4 Convert R Markdown to R script | R Markdown CookbookKnitr With R Markdown Karl

When you process the R Markdown document with knitr, each of the code chunks will be evaluated, and then the code and/or output will be inserted (unless you suppress one or both with chunk options, described below). If the code produces a figure, that figure will be inserted.

Knitr With R Markdown Karl Bromanknitr: Knitr options for an output format (see `knitr_options`) pandoc: Pandoc options for an output format (see `pandoc_options`)

`keep_md`: Keep the markdown file generated by knitting. Note that if this is TRUE then `clean_supporting` will always be FALSE.

`clean_supporting`: Cleanup any supporting files after

conversion see
 render_supporting_files
