# Textile And Clothing Value Chain Roadmap ITC

---

Fibre2Fashion - Textile Magazine - March 2016

Local Clusters in Global Value Chains

Assessing the Environmental Impact of Textiles and the Clothing Supply Chain

Sustainability in the Textile and Apparel Industries

Handbook of Sustainable Textile Production

Sewing Success?

Environmental and Social Aspects of Textiles and Clothing Supply Chain

Roadmap to Sustainable Textiles and Clothing

Low-Income Countries and the Global Clothing Value Chain in a Post-Quota and Post-Crisis World

Management and Inter/Intra Organizational Relationships in the Textile and Apparel Industry

Fashion Supply Chain Management Using Radio Frequency Identification (RFID) Technologies

From Production to Retail

A Guide to Apparel Sourcing and Distribution in China

Transforming Clothing Production into a Demand-driven, Knowledge-based, High-tech Industry

How to Build Reliable Collaboration in Logistics

Fashion Supply Chain Management

Processing, Manufacturing, and Design

Industry and Business Analysis

A Development Perspective

Developing a Revival Strategy for Kenya's Cotton-textile Industry

Environmental and Social Aspects of Textiles and Clothing Supply Chain

Fashioning the Value Chain in the UK, US, and Germany

Optimizing Decision Making in the Apparel Supply Chain Using Artificial Intelligence (AI)

Global Material Sourcing for the Clothing Industry

Consumption, Footprint, and Life Cycle Assessment

Global Value Chains in a Postcrisis World

Supply Chain Management and Logistics in the Global Fashion Sector  
OECD Due Diligence Guidance for Responsible Supply Chains in the Garment and Footwear Sector  
Employment, Wages, and Poverty following the End of the Multi-Fibre Arrangement  
National Capitalisms, Global Production Networks  
The Textile-Clothing Value Chain in India and Bangladesh: How Appropriate Policies Can Promote (or Inhibit) Trade and Investment  
A Value Chain Approach  
Taking Advantage of Business Synergies in the United States and China

## **JANELLE JAYVON**

---

*Fibre2Fashion - Textile Magazine - March 2016* Springer Science & Business Media

The new volume, edited by Wolfgang Kersten and Thorsten Blecker, offers the most important perspectives on supply chain risk management. The contributions written by named experts provide actual information about workable approaches for supply chain risk management, analyses of supply chain risks, identification of key risk factors for logistics outsourcing, assessment of the uncertainty of delivery. With this book readers will gain central insights how to handle approaches for supply chain risk management within their business. They will learn how

to manage risks effectively to build leaner supply chains with a maintainable risk exposure for all partners in industry and services.

**Local Clusters in Global Value Chains** Bloomsbury Publishing USA

Assessing the Environmental Impact of Textiles and the Clothing Supply Chain Woodhead Publishing

Assessing the Environmental Impact of Textiles and the Clothing Supply Chain Springer

This book looks to address the following questions in a post-crisis world: How have lead firms responded to the crisis? Have they changed their traditional supply chain strategy and relocated and/or outsourced part of their production? How will those changes affect developing countries? What should be the policy responses to these changes?

### Sustainability in the Textile and Apparel Industries Elsevier

This book covers the elements involved in achieving sustainability in textiles and Clothing sector. The chapters to be covered in three volumes of this series title cover all the distinctive areas earmarked for achieving sustainable development in textiles and the clothing industry. This second volume deals with the measurement of environmental and societal impacts across the textiles and clothing supply chain. It addresses this important aspect in a comprehensive way including the overall picture of environmental and societal impacts of textiles and clothing supply chain, environmentally sustainable clothing consumption, emerging green technologies and eco-friendly products for sustainable textiles, etc. This volume has a dedicated place to deal with the consumer phase impacts in the life cycle of clothing products, biodegradation of textile products, sustainable business development and its implications in textile sector.

### **Handbook of Sustainable Textile Production** IGI Global

"This book focuses on reporting both quantitative research on FSCM and exploratory studies on emerging supply chain management issues in the fashion industry"--Provided by publisher.

### Sewing Success? Routledge

Fashion Supply Chain Management Using Radio Frequency Identification (RFID) Technologies looks at the application of RFID technologies in such areas as order allocation, garment manufacturing, product tracking, distribution and retail. As supply chains in the textiles and fashion industry become ever more complex and global, and as the shift to mass customization puts

more pressure on a rapid and flexible response to customer needs, monitoring and improving supply chain efficiency in the industry becomes crucial. Radio frequency identification (RFID) technologies offer a unique opportunity to achieve these goals. This book reviews the role of RFID technologies in the textiles and fashion supply chain to improve distribution, process management and product tracking, garment manufacturing, and assembly line operations. It also explores how RFID technologies can improve order allocation in the supply chain, and how these technologies can also be used for intelligent apparel product cross-selling. Its chapters also discuss measuring the impact of RFID technologies in improving the efficiency of the textile supply chain, and modeling the effectiveness of RFID technologies in improving sales performance in fashion retail outlets. Fashion Supply Chain Management Using Radio Frequency Identification (RFID) Technologies is a comprehensive resource for academic researchers, industry managers, and professionals within the fashion industry. Looks at the application of RFID technologies in order allocation, garment manufacturing, product tracking, distribution, and retail Reviews RFID technologies in the textiles and fashion supply chain for improving distribution, process management and product tracking, garment manufacturing, and assembly line operations Focuses on measuring the impact of RFID technologies on efficiency, and modeling the effectiveness of RFID technologies in improving retail outlet sales

### **Environmental and Social Aspects of Textiles and Clothing Supply Chain** Routledge

The OECD Due Diligence Guidance for Responsible Supply Chains in the Garment and Footwear Sector helps enterprises implement

the due diligence recommendations contained in the OECD Guidelines for Multinational Enterprises along the garment and footwear supply chain.

**Roadmap to Sustainable Textiles and Clothing** Hans-Christian Pfohl

In light of the elimination of import restrictions under the WTO at the end of 2004, this book identifies the most recent market developments throughout the entire supply chain and outlines the policy and regulatory challenges that are arising.

Low-Income Countries and the Global Clothing Value Chain in a Post-Quota and Post-Crisis World Routledge

The ways in which we design, make, transport and then discard clothes has a huge social and environmental impact. This book covers responsible business practices and sustainability in the fashion industry from the raw fibre stage, through production, to the point of customer consumption. The concepts of responsibility and sustainability are fast becoming essential factors in business decisions and Responsible Supply Chain Management leads the reader through the multiple stages in the supply chain that can impact on business strategy. A perfect resource for students studying fashion and for those working in the sector who wish to identify the latest thinking as they plan sustainability strategies, the book is divided into four clear sections. The first introductory part of the book examines sustainability in the supply chain by identifying the main three pillars of sustainability (social, economic and environmental) and considers which fashion brands are innovating in this area. Part two looks at fashion logistics and supply chain operations by assessing fibre, yarn and fabric considerations, logistical issues for both garment

production, and service delivery, stock control, transportation, barriers and risks. The third part develops the logistics theme further by identifying recent trends and case studies that highlight agility and lean management structures, and the application of transparency enhancing RFID. This section further applies modelling and simulation techniques from the automotive and pharmaceutical industries to the fashion sector. The final part considers how sustainability can be embedded into the multi-tiered fashion supply chain and its selling environment.

*Management and Inter/Intra Organizational Relationships in the Textile and Apparel Industry* Assessing the Environmental Impact of Textiles and the Clothing Supply Chain

The end of the MFA was followed by rising apparel exports, falling prices, and a reallocation of production and employment between countries. There were also significant changes within countries. The first main finding of this report is that export and employment patterns after the MFA/ATC did not necessarily match predictions. While many predicted that production would shift to low-wage countries, this book shows that only 13 percent of variation in export changes post-MFA can be explained by the differences in wage levels. Second, changes in exports are usually, but not always, good indicators of what happens to wages and employment within countries. This is especially important for policy because it shows that simply using exports as a metric of 'success' in terms of helping the poor is not sufficient. Third, the Book identifies the specific ways that changes in the global apparel market affected earnings. The Book shows that wage premiums change in predictable ways: rising (in most cases) in countries that were proactive in adapting to the

MFA phase-out and expanded their market shares, and falling in countries that failed to respond in a timely fashion to the changing environment. The Book shows that promoting 'upgrading' (defined as shifting to higher-value goods, shifting up the value chain, or 'modernizing' production techniques) seems to be necessary for sustainable competitiveness in the apparel sector but does not necessarily help the poor. Policies that support upgrading need to be complemented with targeted workforce development to make sure that the most vulnerable workers are not left behind. Having a vision for the evolution of the apparel sector that incorporates developing worker skills seems crucial. Otherwise, less-skilled workers could miss out on opportunities to gain valuable work experience in manufacturing.

Fashion Supply Chain Management Using Radio Frequency Identification (RFID) Technologies World Bank Publications

Assessing the Environmental Impact of Textiles and the Clothing Supply Chain, Second Edition, is a fully updated, practical guide on how to identify and respond to environmental challenges across the supply chain. This new edition features updates to important data on environmental impacts and their measurements, the sustainable use of water and electricity, and new legislation, standards and schemes. Chapters provide an introduction to the textile supply chain and an overview of the methods used to measure environmental impacts, including greenhouse gas emissions, water and energy footprints, and a lifecycle assessment (LCA) on environmental impacts. This book will be a standard reference for R&D managers in the textile industry and academic researchers in textile science. Provides a holistic view of the sustainability issues that affect the textile

value chain Explains ways to calculate the textile industry's use of resources, its impact on global warming, and the pollution and waste it generates Reviews key methods for the reduction of the environmental impact of textile products and how they are implemented in practice Includes methods for calculating product carbon footprints (PCFs), ecological footprints (EFs) and lifecycle assessments (LCA)

#### From Production to Retail Elsevier

This book illustrates key sustainability issues in global textile and fashion value chains, by examining individual types of fibers either at a single step in or along the entire value chain. It approaches sustainability-related issues in the textile and fashion value chain from an interdisciplinary and holistic viewpoint, with each contribution linking questions on the textile and fashion value chain to various drivers, indicators and concepts of sustainability. Each chapter represents a single step in the textile and fashion value chain, exploring and considering a wide range of interwoven and interdependent technological, environmental, social, political and economic aspects. Various fibers, textile engineering and chemical treatment steps, as well as innovative business concepts and regulatory frameworks across the entire textile and fashion value chain are identified, analyzed, discussed and critically evaluated. The book provides a systematic overview of the potential and challenges of sustainable textile and fashion value chains, making it of interest to practitioners and scientists in sustainability science, environmental economics, and business, management and innovation. Further, it offers a valuable source of information for industrial and mechanical engineering researchers, and for students in the areas of textile engineering,

fashion, or the apparel and clothing industry.

*A Guide to Apparel Sourcing and Distribution in China* Woodhead Publishing

Recent trends in the fashion market (including an impressive increase in the number of new collections, product assortments and variants, and the emerging mass-customization model) dictate the need for a new approach. "Transforming Clothing Production into a Demand-Driven, Knowledge-Based, High-Tech Industry" discusses the ramifications of such an approach, which must lead to a drastic shortening of the whole cycle from conception to production and retail, as well as a shift from a labor-intensive to a technology- and knowledge-intensive clothing manufacturing industry. "Transforming Clothing Production into a Demand-Driven, Knowledge-Based, High-Tech Industry" is a collection of short papers from prominent researchers involved with the LEAPFROG (Leadership for European Apparel Production From Research along Original Guidelines) initiative. LEAPFROG proposes a revolutionary industrial paradigm based on research results in scientific-technological fields.

**Transforming Clothing Production into a Demand-driven, Knowledge-based, High-tech Industry** World Bank Publications

*Water in Textiles and Apparel: Consumption, Footprint, and Life Cycle Assessment* provides a thorough analysis of one of the most urgent issues facing the textiles industry. As water is essential to the textile production system, and as availability of water is reduced due to natural and anthropogenic factors, the industry must respond. With a thorough treatment of both life cycle assessment and water footprint perspectives, this book

provides practical strategies for responsible water use across the textile supply chain. Readers will learn essential information from research and industry case studies that will help them understand the textile industry's role in this issue. Combines different perspectives, life cycle assessment, government policies, businesses strategies, and case studies to provide a holistic view on the topic Addresses water consumption in every life cycle phase of textile production Explores emerging strategies for water conservation in the textiles sector  
*How to Build Reliable Collaboration in Logistics* OECD Publishing  
This first volume on detox fashion discusses various interesting topics including a Toxic-Free Supply Chain for Textiles and Clothing; Environmental Issues in Textiles; Global Regulations, Restrictions & Research; Making the Change: Consumer Adoption of Sustainable Fashion; and Strategies for Detoxing Your Wardrobe. It provides an overview of the chemical-related issues confronting the fashion sector, summarizes global regulations, and discusses how to make the change by changing consumers' attitude towards adopting sustainable fashion, as well as the best strategies for detoxing our wardrobes.

*Fashion Supply Chain Management* Springer

This book is part of a five-volume set that explores sustainability in textile industry practices globally. Case studies are provided that cover the theoretical and practical implications of sustainable textile issues, including environmental footprints of textile manufacturing, consumer behavior, eco-design in clothing and apparels, supply chain sustainability, the chemistry of textile manufacturing, waste management and textile economics. The set will be of interest to researchers, engineers, industrialists,

R&D managers and students working in textile chemistry, economics, materials science, and sustainable consumption and production. This volume discusses novel trends and concepts in sustainable textile design, including innovative topics such as doodling and upcycling in clothing and apparel design for sustainable fashion initiatives. Along with strategies for repurposing fashion sustainability, the book also covers university interventions for the development of proper and environmentally friendly design practices. Specific technologies addressed include UV applications, laser treatments for dyeing, refined surface design techniques for products such as leather.

Processing, Manufacturing, and Design Springer

Numerous clothing industries face highly dynamic environments, and growth in this environment depends upon both external and internal factors. External factors are represented by aggressive competition and volatile product demand. Internally, the industry must face an increasingly shorter life cycle of the product and the need to innovate both product and organizational development. The competitive advantage of the industry lies in its ability to design a value-creating system based on the management of both external and internal relationships. The successful management of these relationships relies not only on successful customer relationship management but also on effective product supply and demand upkeep. *Management and Inter/Intra Organizational Relationships in the Textile and Apparel Industry* provides emerging research exploring relevant theoretical frameworks and the latest empirical research underlining the complexity of management applications within the textile industry. Featuring coverage on a broad range of topics such as

consumer relationships, cultural identity, and organizational culture, this book is ideally designed for researchers, academicians, professionals, and students working in various disciplines including management, industrial organization, organizational behavior, human resource management, decision science, design science, and information and communication. Moreover, the book will provide insights and support executives and managers of the textile and apparel industry concerned with the ethic design, contamination, and the management relationships with workers, customers, suppliers, the community, and organizational development.

*Industry and Business Analysis* Elsevier

Fibre2Fashion magazine—the print venture of Fibre2Fashion.com since 2011—is circulated among a carefully-chosen target audience globally, and reaches the desks of top management and decision-makers in the textiles, apparel and fashion industry. As one of India's leading industry magazines for the entire textile value chain, Fibre2Fashion Magazine takes the reader beyond the mundane headlines, and analyses issues in-depth.

*A Development Perspective* GRIN Verlag

This book covers the elements involved in achieving sustainability in textiles and Clothing sector. The chapters to be covered in three volumes of this series title cover all the distinctive areas earmarked for achieving sustainable development in textiles and the clothing industry. This second volume deals with the measurement of environmental and societal impacts across the textiles and clothing supply chain. It addresses this important aspect in a comprehensive way including the overall picture of environmental and societal

impacts of textiles and clothing supply chain, environmentally sustainable clothing consumption, emerging green technologies and eco-friendly products for sustainable textiles, etc. This volume has a dedicated place to deal with the consumer phase impacts in the life cycle of clothing products, biodegradation of textile products, sustainable business development and its implications in textile sector.
