Technology is changing money: it has been transformed from physical objects to intangible information. With the arrival of smart cards, mobile phones and Bitcoin it has become easier than ever to create new forms of money. Crucially, money is also inextricably connected with our identities. Your card or phone is a security device that can identify you – and link information about you to your money. To see where these developments might be taking us, David Birch looks back over the history of money, spanning thousands of years. He sees in the past, both recent and ancient, evidence for several possible futures. Looking further back to a world before cash and central banks, there were multiple ‘currencies’ operating at the level of communities, and the use of barter for transactions. Perhaps technology will take us back to the future, a future that began back in 1971, when money

became a claim backed by reputation rather than by physical commodities of any kind. Since then, money has been bits. The author shows that these phenomena are not only possible in the future, but already upon us. We may well want to make transactions in Tesco points, Air Miles, Manchester United pounds, Microsoft dollars, Islamic e-gold or Cornish e-tin. The use of cash is already in decline, and is certain to vanish from polite society. The newest technologies will take money back to its origins: a substitute for memory, a record of mutual debt obligations within multiple overlapping communities. This time though, money will be smart. It will be money that reflects the values of the communities that produced it. Future money will know where it has been, who has been using it and what they have been using it for.

Say Hello to Your Incoming Class—They're Not Millennials Anymore  
Generation Z is rapidly replacing Millennials on college campuses. Those born from 1995 through 2010 have different motivations, learning styles, characteristics,

skill sets, and social concerns than previous generations. Unlike Millennials, Generation Z students grew up in a recession and are under no illusions about their prospects for employment after college. While skeptical about the cost and value of higher education, they are also entrepreneurial, innovative, and independent learners concerned with effecting social change.

Understanding Generation Z's mindset and goals is paramount to supporting, developing, and educating them through higher education. *Generation Z Goes to College* showcases findings from an in-depth study of over 1,100 Generation Z college students from 15 vastly different U.S. higher education institutions as well as additional studies from youth, market, and education research related to this generation. Authors Corey Seemiller and Meghan Grace provide interpretations, implications, and recommendations for program, process, and curriculum changes that will maximize the educational impact on Generation Z students. *Generation Z Goes to*

College is the first book on how this up-and-coming generation will change higher education.

This report analyses all aspects of cultural diversity, which has emerged as a key concern of the international community in recent decades, and maps out new approaches to monitoring and shaping the changes that are taking place. It highlights, in particular, the interrelated challenges of cultural diversity and intercultural dialogue and the way in which strong homogenizing forces are matched by persistent diversifying trends. The report proposes a series of ten policy-oriented recommendations, to the attention of States, intergovernmental and non-governmental organizations,

international and regional bodies, national institutions and the private sector on how to invest in cultural diversity. Emphasizing the importance of cultural diversity in different areas (languages, education, communication and new media development, and creativity and the marketplace) based on data and examples collected from around the world, the report is also intended for the general public. It proposes a coherent vision of cultural diversity and clarifies how, far from being a threat, it can become beneficial to the action of the international community.

Avoid common pitfalls in large-scale projects using these smart strategies  
Over half of large-scale engineering and construction projects—off-shore oil platforms, chemical plants, metals processing, dams, and

similar projects—have miserably poor results. These include billions of dollars in overruns, long delays in design and construction, and poor operability once finally completed. **Industrial Megaprojects** gives you a clear, nontechnical understanding of why these major projects get into trouble, and how your company can prevent hazardous and costly errors when undertaking such large technical and management challenges. Clearly explains the underlying causes of over-budget, delayed, and unsafe megaprojects. Examines effects of poor project management, destructive team behaviors, weak accountability systems, short-term focus, and lack of investment in technical expertise. Author is the CEO of the leading consulting firm for evaluating billion-dollar projects. Companies worldwide are rethinking their large-scale projects. **Industrial Megaprojects** is your essential guide for this rethink, offering the tools and principles that are the true foundation of safe, cost-effective, successful megaprojects.

**The LASIK Handbook: A Case-Based Approach** focuses on the approach to the patient and the planning of surgery rather than the technology. The beginning refractive surgeon is led through a series of cases in a progression from simple to more complex decision-making. Surgical planning and management of

complications are taught in a manner that is commonly used in contemporary medical student training-- providing cases that mimic real-world situations. New to this edition are more than 25 new cases to bring the total to over 100. A companion website provides surgical videos and an interactive online question bank for self-assessment. All chapters are completely updated, and new separate chapters have been on the new technologies in corneal topography, mechanical microkeratomes, femtosecond lasers, and excimer lasers; and International Perspectives.

Since the 1990s, critics and curators have broadly accepted the notion that participatory art is the ultimate political art: that by encouraging an audience to take part an artist can promote new emancipatory social relations. Around the world, the champions of this form of expression are numerous, ranging from art historians such as Grant Kester, curators such as Nicolas Bourriaud and Nato Thompson, to performance theorists such as Shannon Jackson. *Artificial Hells* is the first historical and theoretical overview of socially

engaged participatory art, known in the US as "social practice." Claire Bishop follows the trajectory of twentieth-century art and examines key moments in the development of a participatory aesthetic. This itinerary takes in Futurism and Dada; the Situationist International; Happenings in Eastern Europe, Argentina and Paris; the 1970s Community Arts Movement; and the Artists Placement Group. It concludes with a discussion of long-term educational projects by contemporary artists such as Thomas Hirschhorn, Tania Bruguera, Paweł Althamer and Paul Chan. Since her controversial essay in *Artforum* in 2006, Claire Bishop has been one of the few to challenge the political and aesthetic ambitions of participatory art. In *Artificial Hells*, she not only scrutinizes the emancipatory claims made for these projects, but also provides an alternative to the ethical (rather than artistic) criteria invited by such artworks. *Artificial Hells* calls for a less prescriptive approach to art and politics, and for more compelling, troubling and bolder forms of participatory art

and criticism.

This fully revised and updated edition of an award-winning classic traces the history of Hollywood from the silent era to the present day. *The Hollywood Story* comprehensively covers every aspect of movie-making in America, taking in nickelodeans, drive-ins and multiplexes; the transition from silent to sound, black and white to color; the relationships of producers, directors, stars and technicians; and the function and output of the studios - their major hits and most expensive flops. Praise for the first edition: 'The Hollywood Story is a must for the movie buff... Never has so much information been compiled into one, easy to read, accessible volume.' Bob Dorian, *American Movie Classics* 'A book that more than lives up to its claims... For all those unable to store sixty years of *Variety* under the bed, Mr Finler has performed an invaluable service. The Economist

## Books

*Ophthalmic Nursing* provides an overview for those just setting out in a role within ophthalmic nursing. It includes basic and comprehensible anatomy and physiology – the foundations for understanding how the eye functions and why and how problems occur – and relates them to the care and needs of the patient. This accessible text includes evidence-based procedure guidelines and the inclusion of reflective activities in most chapters allows readers to apply their knowledge to the realities of the care setting. Also covered are the most recent National Institute for Health and Care Excellence (NICE) guidelines for glaucoma and age-related macular degeneration. Since the publication of the fourth edition, there have been many advances in the care and management of the ophthalmic patient. The authors have updated the chapters accordingly and included new colour images and diagrams. References, further

reading and websites have also been updated to reflect current trends. A valuable resource for nurses in practice and training, this book continues to be the ‘go-to’ source for those caring for the ophthalmic patient.

From a Pulitzer Prize-winning investigative reporter at The New York Times comes the troubling story of the rise of the processed food industry -- and how it used salt, sugar, and fat to addict us. *Salt Sugar Fat* is a journey into the highly secretive world of the processed food giants, and the story of how they have deployed these three essential ingredients, over the past five decades, to dominate the North American diet. This is an eye-opening book that demonstrates how the makers of these foods have chosen, time and again, to double down on their efforts to increase consumption and profits, gambling that consumers and regulators would never figure them out. With meticulous original

reporting, access to confidential files and memos, and numerous sources from deep inside the industry, it shows how these companies have pushed ahead, despite their own misgivings (never aired publicly). *Salt Sugar Fat* is the story of how we got here, and it will hold the food giants accountable for the social costs that keep climbing even as some of the industry's own say, "Enough already."

### **Ophthalmic Nursing**

In this second edition essential guide some 150 key genres, movements, theories and production terms are explained and analysed with depth and clarity.

### Cinema Studies: The Key Concepts

Written as a textbook for courses on teaching at the college and seminary level, *Called to Teach* actually reaches out to a much wider audience. Those considering a teaching career, homeschoolers and parents will gain valuable insight and knowledge from Yount's latest book. *Artificial Hells*
