**Ford Madox Ford's Modernity** Oxford University Press on Demand  
This book collects independent contributions on current developments in quantum information theory, a very interdisciplinary field at the intersection of physics, computer science and mathematics. Making intense use of the most advanced concepts from each discipline, the authors give in each

contribution pedagogical introductions to the main concepts underlying their present research and present a personal perspective on some of the most exciting open problems. Keeping this diverse audience in mind, special efforts have been made to ensure that the basic concepts underlying quantum information are covered in an understandable way for mathematical readers, who can find there new open challenges for their research. At the same time, the volume can also be of use to physicists wishing to learn advanced mathematical tools, especially of differential and algebraic geometric

nature.

### **A Reappraisal of Marshall McLuhan**

Peter Lang

This book addresses the development of advanced methods for the prediction, the estimation of occurrence probabilities and the risk related to extreme hydrological events. It also discusses the reduction of the vulnerability of social, economic, and engineering systems to extreme hydrologic events and the decrease of their effects on such systems.

*Topics in Noncommutative Algebra*  
Springer Science & Business Media  
Physicists firmly believe that the

differential equations of nature should be hyperbolic so as to exclude action at a distance; yet the equations of irreversible thermodynamics - those of Navier-Stokes and Fourier - are parabolic. This incompatibility between the expectation of physicists and the classical laws of thermodynamics has prompted the formulation of extended thermodynamics. After describing the motifs and early evolution of this new branch of irreversible thermodynamics, the authors apply the theory to mon-atomic gases, mixtures of gases, relativistic gases, and "gases" of phonons and photons. The discussion brings into perspective the various phenomena called second sound, such as heat propagation, propagation of shear stress and concentration, and the second sound in liquid helium. The formal mathematical structure of extended thermodynamics is exposed and the theory is shown to be fully compatible with the kinetic theory of gases. The study closes with the testing of extended thermodynamics through the exploitation of its predictions for measurements of light scattering and sound propagation.

*Moving Cultures* BRILL

Meta-Heuristics: Advances and Trends in Local Search Paradigms for Optimizations comprises a carefully refereed selection of extended versions of the best papers presented at the Second Meta-Heuristics Conference (MIC 97). The selected articles describe the most recent developments in theory and applications of meta-heuristics, heuristics for specific problems, and comparative case studies. The book is divided into six parts, grouped mainly by the techniques considered. The extensive first part with twelve papers covers tabu search and its application to a great variety of well-known combinatorial optimization problems (including the resource-constrained project scheduling problem and vehicle routing problems). In the second part we find one paper where tabu search and simulated annealing are investigated comparatively and two papers which consider hybrid methods combining tabu search with genetic algorithms. The third part has four papers on genetic and evolutionary algorithms. Part four arrives at a new paradigm within meta-heuristics. The fifth part studies the behavior of parallel local search algorithms mainly from a tabu search

perspective. The final part examines a great variety of additional meta-heuristics topics, including neural networks and variable neighbourhood search as well as guided local search. Furthermore, the integration of meta-heuristics with the branch-and-bound paradigm is investigated.

POSITIVE PSYCHOLOGY Bringing together today's most prominent positive psychology researchers to discuss current themes and issues in the field Positive psychology is the scientific study of the strengths, rather than the weaknesses, in human thoughts, feelings, and behaviors. For much of its history, psychology has focused on the negative, completely overlooking the positive attributes that allow individuals and communities to thrive. Positive Psychology is a collection of essays that together constitutes a much-needed theoretical rationale and critical assessment of the field. This book reassesses what we already know and provides directions for the future. Contributors are leading international authors, including Mihaly Csikszentmihalyi,

Robert Sternberg, Vittorio Caprara, C. Daniel Batson, and Illona Boniwell, among others. These luminaries write in a way that is rigorous enough for academic use but accessible to professionals, policymakers, and lay audiences as well. The content of Positive Psychology includes both theoretical and applied contributions focusing on a range of areas including altruism, positive creativity, science of well-being, forgiveness, coaching for leadership, cyberpsychology, intelligence, responding to catastrophes like COVID-19, time perspective, physiological and epigenetic, youth civic engagement, ups and downs of love, flow and good life, global perspectives on positive psychology, self and collective efficacy, positive psychology interventions and positive orientation. The book is pitched to senior undergraduates, graduates, academics and researchers and provides insights and perspectives into neglected and unresolved questions. Brings together the latest viewpoints and research findings on positive psychology, from the leading thinkers in the field. Offers both theoretical and applied insights, for a well-rounded reference on this new and fast growing

field. Contains contributions from well known authors like Mihaly Csikszentmihalyi, Robert Sternberg, and Vittorio Caprara. Appeals to academic, professional, and lay audiences with an interest in acquiring a profound knowledge of positive psychology. No other book currently on the market addresses such a breadth of issues in positive psychology. Positive Psychology represents a significant theoretical boost to this exciting field.

Social and Industrial Policy Change in Italy and Japan Cambridge University Press

This book presents a broad view of the current state of the art regarding the dynamic response of composite and sandwich structures subjected to impacts and explosions. Each chapter combines a thorough assessment of the literature with original contributions made by the authors. The first section deals with fluid-structure interactions in marine structures. The first chapter focuses on hull slamming and particularly cases in which the deformation of the structure affects the motion of the fluid during the water entry of flexible hulls. Chapter 2 presents an extensive series of tests underwater and

in the air to determine the effects of explosions on composite and sandwich structures. Full-scale structures were subjected to significant explosive charges, and such results are extremely rare in the open literature. Chapter 3 describes a simple geometrical theory of diffraction for describing the interaction of an underwater blast wave with submerged structures. The second section addresses the problem of impact on laminated composite structures with chapters devoted to ballistic impacts on pre-stressed composite structures, tests developed to simulate dynamic failure in marine structures, damage mechanisms and energy absorption in low velocity impacts, perforation, the numerical simulation of intra and inter-ply damage during impact, and hail impact on laminated composites. Sandwich structures with laminated facings are considered in Section 3 with chapters dealing with the discrete modeling of honeycomb core during the indentation of sandwich structures, the behavior of fold core sandwich structures during impact, and impact on helicopter blades. The fourth section consists of two chapters

presenting experimental results and numerical simulation of composite structures subjected to crash. This volume is intended for advanced undergraduate and graduate students, researchers, and engineers interested and involved in analysis and design of composite structures.

**Extreme Hydrological Events: New Concepts for Security** John Wiley & Sons  
In the age of "complex Tv", of social networking and massive consumption of transmedia narratives, a myriad short-lived phenomena surround films and TV programs raising questions about the endurance of a fictional world and other mediatized discourse over a long arc of time. The life of media products can change direction depending on the variability of paratextual materials and activities such as online commentaries and forums, promos and trailers, disposable merchandise and gadgets, grassroots video production, archives, and gaming. This book examines the tension between permanence and obsolescence in the production and experience of media byproducts analysing the affections and meanings they convey and uncovering the

machineries of their persistence or disposal. Paratexts, which have long been considered only ancillary to a central text, interfere instead with textual politics by influencing the viewers' fidelity (or infidelity) to a product and affecting a fictional world's "life expectancy". Scholars in the fields of film studies, media studies, memory and cultural studies are here called to observe these byproducts' temporalities (their short form and/or long temporal extension, their nostalgic politics or future projections) and assess their increasing influence on our use of the past and present, on our temporal experience, and, consequently, on our social and political self-positioning through the media.

JURIX 2017: The Thirtieth Annual Conference University of Ottawa Press  
Migration is now regarded as a security issue, both in public debate and government policies. In turn, the phenomenon of detention as a governance practice has emerged, and the developing presence of camps in Europe for migrants has given rise to a tangle of new and complex issues. This book examines the phenomenon of irregular immigration, and

provides a comprehensive picture of the practices and the implications of detention of migrants within and the European Union. It analyses 'detention' as a tool of governance and in doing so explores several key themes: the security threat for Europe the security governance processes enacted to handle irregular immigration the forms of detention in different geographical contexts the effectiveness of the EU's approach to the issue. The EU, Migration and the Politics of Administrative Detention will be of interest to students and scholars of the EU's external relations, migration, human rights, European politics and security studies.

**Ford Madox Ford and "The Republic of Letters"** World Scientific

Aquest DVD va ser gravat a la Escola d'Estiu d'EURON amb el títol "Robots manipulats directament en línia per Internet" que es va celebrar a la Universitat Jaume I els dies 19 al 23 de setembre de 2003. Recull les conferències registrades en vídeo, transparències de presentació, demostracions, el material de laboratori, etc.

*Meta-Heuristics* IOS Press

This book, first published in 2007, offered

the first and only summary of decades of archaeological research in the Oman Peninsula. The original eleven chapters are expanded and enhanced in this new edition by a number of new 'windows', written by a new generation of scholars, in order to include more recent research and interpretations.

*Letitia Elizabeth Landon and Metrical Romance* BRILL

The contributors to the present volume approach World War I and World War II as complex and intertwined crossroads leading to the definition of the new European (and world) reality, and deeply pervading the making of the twentieth century. These scholars belong to different yet complementary areas of research – history, literature, cinema, art history; they come from various national realities and discuss questions related to Italy, Britain, Germany, Poland, Spain, at times introducing a comparison between European and North American memories of the two World War experiences. These scholars are all guided by the same principle: to encourage the establishment of an interdisciplinary and trans-national dialogue in order to work out new

approaches capable of integrating and acknowledging different or even opposing ways to perceive and interpret the same historical phenomenon. While assessing the way the memories of the two World Wars have been readjusted each time in relation to the evolving international historical setting and through various mediators of memory (cinema, literature, art and monuments), the various essays contribute to unveil a cultural panorama inhabited by contrasting memories and by divided memories not to emphasise divisions, but to acknowledge the ethical need for a truly shared act of reconciliation.

**Proceedings of the ACM 13th International Workshop on Data Warehousing and OLAP.** Archaeopress Publishing Ltd

A collection of papers surveying recent progress in the field of Combinatorial Optimization. Topics examined include theoretical and computational aspects (Boolean Programming, Probabilistic Analysis of Algorithms, Parallel Computer Models and Combinatorial Algorithms), well-known combinatorial problems (such as the Linear Assignment Problem, the

Quadratic Assignment Problem, the Knapsack Problem and Steiner Problems in Graphs) and more applied problems (such as Network Synthesis and Dynamic Network Optimization, Single Facility Location Problems on Networks, the Vehicle Routing Problem and Scheduling Problems).

*At the Speed of Light There is Only Illumination* Springer Science & Business Media

André Caron and Letizia Caronia look at teenagers' use of text messaging to chat, flirt, and gossip. They find that messaging among teens has little to do with sending shorthand information quickly. Instead, it is a verbal performance through which young people create culture. Moving Cultures argues that teenagers have domesticated and reinterpreted this technology.

*Assignment Problems, Revised Reprint* Springer Science & Business Media

This book offers a critical analysis of the European colonial heritage in the Arab countries and highlights the way this legacy is still with us today, informing the current state of relations between Europe and the formerly colonized states. The

work analyses the fraught relationship between the Western powers and the Arab countries that have been subject to their colonial rule. It does so by looking at this relationship from two vantage points. On the one hand is that of humanitarian intervention—a paradigm under which colonial rule coexisted alongside “humanitarian” policies pursued on the dual assumption that the colonized were “barbarous” peoples who wanted to be civilized and that the West could lay a claim of superiority over an inferior humanity. On the other hand is the Arab view, from which the humanitarian paradigm does not hold up, and which accordingly offers its own insights into the processes through which the Arab countries have sought to wrest themselves from colonial rule. In unpacking this analysis the book traces a history of international and colonial law, to this end also using the tools offered by the history of political thought. The book will be of interest to students, academics, and researchers working in legal history, international law, international relations, the history of political thought, and colonial studies.

### **A History and Philosophy of International Law** Elsevier

This text charts the process of industrial chemical synthesis, from the first discovery of a molecule, or new chemical entity, to its entry in the marketplace as a drug, with all the development needs and problems that take place along the way.

### **An Introduction to Mathematical Models** Springer

Are you a graduate, postgraduate or PhD student? Are you simply looking for a new job in the private or public sector, in research or industry? If your aim is to produce a professional CV or resume, then this book is for you. Based on interviews with recruiters and HR managers, and an analysis of hundreds of CVs from around 40 different countries, the book is structured as a series of FAQs. Topics covered include: how recruiters and HR people analyse a CV whether using a template is a good idea the difference between a CV and a resume how to present your personal details and whether to include a photo how to write an Executive Summary what to write in each section (Education, Work Experience, Skills, Personal Interests) how to write

dates how to highlight your language, communication and team skills how to get and write references You will also learn some hints and strategies for writing a: cover letter LinkedIn profile reference letter bio The last chapter of the book contains a simple template to help you get the job of your dreams!

### The EU, Migration and the Politics of Administrative Detention John Wiley & Sons

The first textbook to explain the principles of epistemic game theory.

University of Toronto Press

The study of stellar dynamics is experiencing an exciting new wave of interest thanks to observational campaigns and the ready availability of powerful computers. Whilst its relevance includes many areas of astrophysics, from the structure of the Milky Way to dark matter halos, few texts are suited to advanced students. This volume provides a broad overview of the key concepts beyond the elementary level, bridging the gap between the standard texts and specialist literature. The author reviews Newtonian gravity in depth before examining the dynamical properties of

collisional and collisionless stellar-dynamical systems that result from gravitational interactions. Guided examples and exercises ensure a thorough grounding in the mathematics, while discussions of important practical applications give a complete picture of the subject. Readers are given a sound working knowledge of the fundamental ideas and techniques employed in the field and the conceptual background needed to progress to more advanced graduate-level treatises.

*Dynamic Failure of Composite and Sandwich Structures* Springer

This first comprehensive overview of this important synthetic reaction covers the whole spectrum of this modern and rapidly

developing field. Clearly structured, the book presents all the known synthetic approaches for the construction of aromatic compounds bearing benzylic stereocenters with a defined configuration. With its representative synthetic procedures, organocatalysis and industrial applications it combines a theoretical basis with practical examples, resulting in valuable advice for beginners and experts alike. The ultimate source for every synthetic chemist in academia and industry.

*Policies for Distributed Systems and Networks* Routledge

*History and Representation in Ford Madox Ford's Writings* explores the idea of history across various genres: fiction, autobiography, books about places and

cultures, criticism, and poetry. 'I wanted the Novelist in fact to appear in his really proud position as historian of his own time', wrote Ford. The twenty leading specialists assembled for this volume consider his writing about twentieth-century events, especially the First World War; and also his representations of the past, particularly in his fine trilogy about Henry VIII and Katharine Howard, *The Fifth Queen*. Ford's provocative dealings with the relationship between fiction and history is shown to anticipate postmodern thinking about historiography and narrative. The collection includes essays by two acclaimed novelists, Nicholas Delbanco and Alan Judd, assessing Ford's grasp of literary history, and his place in it.
