Close Reading 9-12 Answer Book & Copiable Test Forms is, firstly, a comprehensive collection of full answers and marking schemes for the comprehension activities offered in the accompanying textbook Close Reading 9-12. In addition, the questions offered in those interpretation activities are available here in photocopyable and re-designed format, with space for answers to be written beneath each question, in similar format to National Tests in Scotland. Teachers are thus allowed the opportunity to use the passages as realistic practice material for reading tests at Level D and the upper reaches of Level C. Also available: Close Reading 9-12 Pupil's Book (0340 91472 6) provides a wide selection of extracts with accompanying interpretation/comprehension-type questions. In addition, the 'Taking A Closer Look' section in each chapter focuses on a specific language feature from the passage and provides further explanations and practice exercises on that aspect of language, whilst a 'Follow On' section gives the opportunity to explore wider issues raised by the extract, plus ideas for extended writing.

Objectives The purpose of Top-Down Network Design, Third Edition, is to help you design networks that meet a customer's business and technical goals. Whether your customer is another department within your own company or an external client, this book provides you with tested processes and

tools to help you understand traffic flow, protocol behavior, and internetworking technologies. After completing this book, you will be equipped to design enterprise networks that meet a customer's requirements for functionality, capacity, performance, availability, scalability, affordability, security, and manageability. Audience This book is for you if you are an internetworking professional responsible for designing and maintaining medium- to large-sized enterprise networks. If you are a network engineer, architect, or technician who has a working knowledge of network protocols and technologies, this book will provide you with practical advice on applying your knowledge to internetwork design. This book also includes useful information for consultants, systems engineers, and sales engineers who design corporate networks for clients. In the fast-paced presales environment of many systems engineers, it often is difficult to slow down and insist on a top-down, structured systems analysis approach. Wherever possible, this book includes shortcuts and assumptions that can be made to speed up the network design process. Finally, this book is useful for undergraduate and graduate students in computer science and information technology disciplines. Students who have taken one or two courses in networking theory will find *Top-Down Network Design, Third Edition*, an approachable introduction to the engineering and business issues related to developing real-world networks that solve typical business problems. Changes for the Third Edition Networks have changed in many ways since the second edition was published. Many legacy technologies have disappeared and are no longer covered in the book. In addition, modern networks have become multifaceted, providing support for numerous bandwidth-hungry applications and a variety of devices, ranging from smart phones to tablet PCs to high-end servers. Modern users expect the network to be available all the time, from any device, and to let them securely collaborate with coworkers, friends, and family. Networks today support voice, video, high-definition TV, desktop sharing, virtual meetings, online training, virtual reality, and applications that we can't even imagine that brilliant college students are busily creating in their dorm rooms. As applications rapidly change and put more demand on networks, the need to teach a systematic approach to network design is even more important than ever. With that need in mind, the third edition has been retooled to make it an ideal textbook for college students. The third edition features review questions and design scenarios at the end of each chapter to help students learn top-down network design. To address new demands on modern networks, the third edition of *Top-Down Network Design* also has updated material on the following topics: ζ Network redundancy ζ Modularity in network designs ζ The Cisco SAFE security reference architecture ζ The Rapid Spanning Tree Protocol (RSTP) ζ Internet Protocol version 6 (IPv6) ζ Ethernet scalability options, including 10-Gbps Ethernet and Metro Ethernet ζ Network design and management tools

The Medieval Life of King Alfred the Great Pearson Education

Very few King's earn the appellation 'Great'. Alfred is the only English King honoured with this name and is credited with various successes (the foundation of a navy, English education system and religious revival). His memory looms large in the English Imagination. The medieval 'Life' of King Alfred of Wessex purports to be written by Asser, a monk in the King's service. This account of one of England's best loved and most famous kings has been accepted as offering evidence on most aspects of life in early medieval England and beyond. It was used in Victorian times to create a 'Cult' of Alfred. Alfred Smyth offers a carefully annotated translation of the 'Life' together with a long commentary. He argues that the 'Life' is a forgery which has profound implications not only for our understanding of the early English and medieval past but also for the nature of biography and history. This close scholarly rendering of the text allows the reader access to the intricacies of medieval history.

A leading biblical scholar offers a powerful reexamination of the Bible's origins and its connections to human suffering Human trauma gave birth to the Bible, suggests eminent religious scholar David Carr. The Bible's ability to speak to suffering is a major reason why the sacred texts of Judaism and Christianity have retained their relevance for thousands of years. In his fascinating and provocative reinterpretation of the Bible's origins, the author tells the story of how the Jewish people and Christian community had to adapt to survive multiple catastrophes and how their holy scriptures both reflected and reinforced each religion's resilient nature. Carr's thought-provoking analysis demonstrates how many of the central tenets of biblical religion, including monotheism and the idea of suffering as God's retribution, are factors that provided Judaism and Christianity with the strength and flexibility to endure in the face of disaster. In addition, the author explains how the Jewish Bible was deeply shaped by the Jewish exile in Babylon, an event that it rarely describes, and how the Christian Bible was likewise shaped by the unspeakable shame of having a crucified savior.

Written by Peter Moon and Radu Cinamar, a highly placed Romanian intelligence operative, this book heralds the most remarkable archaeological find in the annals of Mankind. Unbeknownst to most, there is an ancient sphinx located in the Bucegi Mountains of Romania. In 2003, the Pentagon discovered, through the use of satellite technology, an anomaly beneath this ancient sphinx. Through the highest levels of Freemasonry, the Pentagon was able to secure an alliance with the most secret department of the Romanian Intelligence Service which is known as Department Zero. Together, the Romanians and the Americans utilised the Pentagon's secret technology to penetrate a hidden chamber beneath the sphinx which was otherwise inaccessible to humans. What was discovered eventually was a holographic Hall of Records left by an advanced civilisation near three mysterious tunnels leading into the Inner Earth. The book chronicles the discovery of these modern day artefacts which represent the dawn of a new era for Mankind. Peter Moon is brought into the fold through his friend, Dr David Anderson, the mysterious scientist who founded the Time Travel Research Center on Long Island and also maintains a similar facility in Romania. Recognising that such satellite technology would had to have utilised Dr Anderson's proprietary space-time technology for maintaining satellites in orbit, Peter Moon pursues these matters further and accepts Dr Anderson's invitation to Romania where he visits the Romanian Sphinx and learns of a mysterious association between the mysterious time travel scientist and Radu Cinamar.
