Sean D. Murphy's wide-ranging and in-depth 2002 survey of U.S. practice in international law in the period 1999-2001 draws upon the statements and actions of the executive, legislative and judicial branches of the U.S. government to examine its involvement across a range of areas. These areas include diplomatic and consular relations, jurisdiction and immunities, state responsibility and liability, international organizations, international economic law, human rights, and international criminal law. At the time of its first publication this summary of the most salient issues was a central resource on U.S. practice in international law. The

volume contains extracts from hard-to-find documents, generous citations to relevant sources, tables of cases and treaties, and a detailed index. Revealing international law in the making, this essential tool for researchers and practitioners was the first in a series of books capturing the international law practice of a global player.

The Dewey Decimal Classification system (DDC) is the world's most popular library classification system. The 23rd edition of the DDC was published in 2011. This second edition of *The Theory and Practice of the Dewey Decimal Classification System* examines the history, management and technical aspects of the DDC up to its latest edition. The book places emphasis on explaining the

structure and number building techniques in the DDC and reviews all aspects of subject analysis and number building by the most recent version of the DDC. A history of, and introduction to, the DDC is followed by subject analysis and locating class numbers, chapters covering use of the tables and subdivisions therein, multiple synthesis, and using the relative index. In the appendix, a number of academically-interesting questions are identified and answered. Provides a comprehensive chronology of the DDC from its inception in 1876, to the present day Describes the governance, revision machinery and updating process Gives a table of all editors of the DDC

Building Practice in the Dutch East Indies Chandos Publishing

This volume is designed to introduce the principles of music classification to beginning music catalogers, as well as to non-specialist catalogers, and those who only occasionally deal with music materials. It will surely relieve the stress level for general catalogers by providing practical guidelines as well as clarifying

and explaining the most commonly used classification systems in the United States—the Dewey Decimal Classification (DDC), the Library of Congress Classification (LCC), and the Alpha-Numeric System for Classification of Recordings (ANSCR).

Practical Guide to DDC 20, Dewey Decimal Classification Englewood, Colo. : Libraries Unlimited

This book reveals the 'epistemic imposition' of architectural ideas and practices by colonists from the Netherlands in the Dutch East Indies from the late-19th century onwards, exploring the ways in which this came to shape the profession up to the present day in what is now known as Indonesia. The author investigates the scope of these interventions by Dutch colonial agents in relation to existing Javanese building practices, pursuing two main lines of enquiry. The first is to examine the methods of dissemination of Dutch-taught technical knowledge and skills across the Dutch East Indies. The second is to scrutinise the effects of this dissemination upon the formation of architectural knowledge and practice within the colony. Throughout this book, the argument is made that what took place in architecture in the Dutch East Indies involved a process of disseminating building knowledge as a form of 'epistemic imposition' upon the indigenous citizens of the colony - in other words, as an effective instrument of Dutch colonial power. This book will be of

interest to architecture academics and students interested in developing a broader global understanding of architecture, especially those interested in decolonising the teaching of architectural history and theory.
