The light-duty vehicle

fleet is expected to

undergo substantial

technological changes
over the next several
decades. New powertrain
designs, alternative fuels,
advanced materials and
significant changes to the
vehicle body are being
driven by increasingly
stringent fuel economy
and greenhouse gas
emission standards. By
the end of the next
decade, cars and light-
duty trucks will be more
fuel efficient, weigh less,
emit less air pollutants,

have more safety
features, and will be more
expensive to purchase
relative to current
vehicles. Though the
gasoline-powered spark
ignition engine will
continue to be the
dominant powertrain
configuration even
through 2030, such
vehicles will be equipped
with advanced
technologies, materials,
electronics and controls,
and aerodynamics. And

by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate

Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and

barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

 Medicines from Animal
 Cell Culture focuses on
 the use of animal cell
 culture, which has been
 used to produce human
 and veterinary vaccines,
 interferon, monoclonal
 antibodies and genetically
 engineered products such

as tPA and erythropoietin.
 It also addresses the
 recent dramatic
 expansion in cell-based
 therapies, including the
 use of live cells for tissue
 regeneration and the
 culture of stem cells.
 Medicines from Animal
 Cell Culture: Provides
 comprehensive
 descriptions of methods
 for cell culture and
 nutrition as well as the
 technologies for the
 preservation and
 characterisation of both
 the cells and the derived
 products Describes the
 preparation of stem cells

and others for use in cell-
 based therapies – an area
 of burgeoning research
 Includes experimental
 examples to indicate
 expected results Covers
 regulatory issues from the
 UK, the EU and the USA
 and reviews how these
 are developing around the
 world Addresses the key
 issues of standardisation
 and validation with
 chapters on GLP and GMP
 for cell culture processes
 Delivering insight into the
 exciting world of
 biological medicines and
 directions for further
 investigation into specific

topics, Medicines from Animal Cell Culture is an essential resource for researchers and technicians at all levels using cell culture within the pharmaceutical, biotechnology and biomedical industries. It is of value to laboratory managers in these industries and to all those interested in this topic alike.

Feature Papers CRC Press

This book extensively discusses the biology of telomere with the help of advanced information. Developments in telomere researches have provided an interrelation of telomere dysfunction with cellular aging and several age-related human diseases. Some new findings and studies have further widened our knowledge of telomere functions, where telomeres have been demonstrated to be essential for microbial pathogen virulence and telomere proteins have

significant non-telomeric cellular functions. This book presents current opinions on selected areas of telomere research and their implication, in the hope of benefitting interested individuals in their future studies and enhancing their research progress.

This book discusses the natural and anthropogenic determinants of the environment and their impact on human health. It throws light on the perspectives of climate change with case studies from Australia, India, Italy, and Latin America. Themes covered are ecology of antibiotic resistant microorganisms, pesticide and heavy metal (arsenic) problems in

natural environment; molecular advances in understanding of microbial interactions; ecological studies of human/animal health and diseases; food security, technological developments and more. The various chapters incorporate both theoretical and applied aspects and may serve as baseline information for future research through which significant development is possible. *Marine Biotoxins* Haynes Manuals XL75 (1977-1979), XR75
