Pharmaceuticals, due to their pseudo-persistence and biological activity as well as their extensive use in human and veterinary medicine, are a class of environmental contaminants that is of emerging concern. In contrast to some conventional pollutants, they are continuously delivered at low levels, which might give rise to toxicity even without high persistence rates. These chemicals are designed to have a specific physiological mode of action and to resist frequently inactivation before exerting their intended therapeutic effect. These features, among others, result in the bioaccumulation of pharmaceuticals which are responsible for toxic effects in aquatic and terrestrial ecosystems. It is extremely important to know how to remove them from the environment and/or how to implement procedures or treatments resulting in their biological inactivation. Although great advances have been made in their detection in aquatic matrices, there remains limited analytical methodologies available for the trace analysis of target and non-target pharmaceuticals in matrices such as soils, sediments, or biota. There are still many gaps in the data on their fate and behavior in the environment as well as on their threats to ecological and human health. This book has included nine current research and three review articles in this field.

The Empire of Civil Society Simon and Schuster

Contrary to conventional wisdom, the concept of power has not always been central to international relations theory. During the 1920s and 30s, power was often ignored or vilified by international relations scholars—especially in America. Power and International Relations explores how this changed in later decades by tracing how power emerged as an important social science concept in American scholarship after World War I. Combining intellectual history and conceptual analysis, David Baldwin examines power's increased presence in the study of international relations and looks at how the three dominant approaches of realism, neoliberalism, and constructivism treat power. The clarity and precision of thinking about power increased greatly during the last half of the twentieth century, due to efforts by political scientists, psychologists, sociologists, economists, philosophers, mathematicians, and geographers who contributed to "social power literature." Baldwin brings the insights of this literature to bear on the three principal theoretical traditions in international relations theory. He discusses controversial issues in power analysis, and shows the relevance of older works frequently underappreciated today. Focusing on the social power perspective in international relations, this book sheds light on how power has been considered during the last half century and how it should be approached in future research.

The purpose of this book is to contribute to the appreciation of the linguistic, literary and contextual value of Homeric personal names. This is an old topic, which famously interested Plato, and an object of constant scholarly attention from the time of ancient

commentators to the present day. The book begins with an introduction to the particularly complex set of factors that affect all efforts to interpret Homeric names. The main chapters are structured around the character and action of selected heroes in their Homeric contexts (in the case of the Iliad, a heroic war; the Odyssey chapter encompasses more than one planes of action). They offer a survey of modern etymologies, set against ancient views on names and naming, in order to reconstruct (as far as possible) the reception of significant names by ancient audiences and further to shed light on the parameters surrounding the choice and use of personal names in Homer. An Appendix touches on the underexplored career of Homeric personal names as historical names, offering data and a preliminary analysis. *The Melian Academy Vol. 5* Torkel Opsahl Academic EPublisher
The Food and Agriculture Organization of the United Nations has recently estimated that the world equid population exceeds 110 million. Working equids (horses, ponies, donkeys, and mules) remain essential to ensure the livelihood of poor communities around the world. In many developed countries, the equine industry has significant economical weight, with around 7 million horses in Europe alone. The close relationship between humans and equids and the fact that the athlete horse is the terrestrial mammal that travels the most worldwide after humans are important elements to consider in the transmission of pathogens and diseases, amongst equids and to other species. The potential effect of climate change on vector ecology and vector-borne diseases is also of concern for both human and animal health. In this Special Issue, we intend to explore our understanding of a panel of equine viruses, looking at their pathogenicity, their importance in terms of welfare and potential association with diseases, their economic importance and impact on performance, and how their identification can be helped by new technologies and methods.

The Melian: Revelation (Collector Edition) Springer Nature

This book explores the lives and achievements of two Irish sisters, Edith and Florence Stoney, who pioneered the use of new electromedical technologies, especially X-rays but also ultraviolet radiation and diathermy. In addition, the narrative follows several intertwined themes as experienced by the sisters during their lifetimes. Their upbringing, influenced by their liberal-minded scientist father, set the tone for both their lives. Irish independence fractured their family heritage. Their professional experiences, fulfilling for Florence as a qualified doctor but often frustrating for Edith as a Cambridge-educated scientist, mirrored those of other aspiring women during this period, when the suffragist movement expanded and women's lobby groups were formed. World War I created an environment in which their unusual specialist knowledge was widely needed, and the sisters' war experiences are carefully examined in the book. But ultimately this is the extraordinary story of two independent but closely bonded sisters and their abiding love and support for one another.

Continuing her irresistible Royal Brotherhood Series, bestselling author Sabrina Jeffries introduces the third of three half-noble half brothers—the brashest rogue in all of London. Proper Lady Christabel, the Marchioness of Haversham, is desperate to regain some letters that could destroy her—so desperate that she pretends to be the mistress of notorious gaming-club owner Gavin Byrne to accompany him to a scandalous house party where she can reclaim them. But when she agreed to let Byrne coach her on how a true mistress behaves, she never suspected how very . . . persuasive his wicked lessons would be. Gavin is secretly determined to find the letters himself and use them for revenge against the noble sire who abandoned him to grow up in London's worst slums. He's also delighted at how very successful his "mistress lessons" are: it won't be long before the luscious young widow is in his bed. But when Christabel catches Gavin in his own seductive net, he faces a difficult choice: to wreak the vengeance he's planned all his life, or to protect the woman he may—to his own astonishment—need more than revenge.

Few ideas in Chinese discourse are as ubiquitous as *ming*, variously understood as "command," "allotted lifespan," "fate," or "life." In the earliest days of Chinese writing, *ming* was already present, invoked in divinations and etched into ancient bronzes;

it has continued to inscribe itself down to the twenty-first century in literature and film. This volume assembles twelve essays by some of the most eminent scholars currently working in Chinese studies to produce the first comprehensive study in English of ming's broad web of meanings. The essays span the history of Chinese civilization and represent disciplines as varied as religion, philosophy, anthropology, literary studies, history, and sociology. Cross-cultural comparisons between ancient Chinese views of ming and Western conceptions of moira and fatum are discussed, providing a specific point of departure for contrasting the structure of attitudes between the two civilizations. Ming is central to debates on the legitimacy of rulership and is the crucial variable in Daoist manuals for prolonging one's life. It has

preoccupied the philosopher and the poet and weighed on the minds of commoners throughout imperial China. Ming was the subject of the great critic Jin Shengtan's last major literary work and drove the narrative of such classic novels as *The Investiture of the Gods* and *The Romance of the Three Kingdoms*. Confucius, Mencius, and most other great thinkers of the classical age, as well as those in ages to come, had much to say on the subject. It has only been eschewed in contemporary Chinese philosophy, but even its effacement there has ironically turned it into a sort of absent cause.
