In this beautifully written and deeply researched study, Hannah Frank provides an original way to understand American animated cartoons from the Golden Age of animation (1920-1960). In the pre-digital age of the twentieth century, the making of cartoons was mechanized and standardized: thousands of drawings were inked and painted onto individual transparent celluloid sheets (called "cels") and then photographed in succession, a labor-intensive process that was divided across scores of artists and technicians. In order to see the art, labor, and technology of cel

animation, Frank slows cartoons down to look frame by frame, finding hitherto unseen aspects of the animated image. What emerges is both a methodology and a highly original account of an art formed on the assembly line.

provides an

introduction to both

the technologies of the

Internet Age and their social implications. This innovative and timely textbook brings together current work in communication, political science, philosophy, popular culture, history, economics, and the humanities to present an examination of the theoretical and critical issues in the study of computer-mediated communication. Continuing the model of the best-selling first edition, authors Andrew F. Wood and Matthew J. Smith introduce computer-mediated communication (CMC) as a subject of academic research as well as a lens through which to examine contemporary trends in society. This second edition of *Online Communication* covers

online identity, mediated relationships, virtual communities, electronic commerce, the digital divide, spaces of resistance, and other topics related to CMC. The text also examines how the Internet has affected contemporary culture and presents the critiques being made to those changes. Special features of the text include: *Hyperlinks--presenting greater detail on topics from the chapter *Ethical Inquiry--posing questions on the nature of human communication and conduct online *Online Communication and the Law--examining the legal ramifications of CMC issues Advanced undergraduates, graduate students, and researchers interested

in the field of computer-mediated communication, as well as those studying issues of technology and culture, will find *Online Communication* to be an insightful resource for studying the role of technology and mediated communication in today's society.

Electrical issues in European cars can be intimidating. The Hack Mechanic Guide to European Automotive Electrical Systems shows you how to think about electricity in your car and then take on real-world electrical problems. The principles discussed can be applied to most conventional internal-combustion-engined vehicles, with a focus on European cars

spanning the past six decades. Drawing on The Hack Mechanic's wisdom and experience, the 38 chapters cover key electrical topics such as battery, starter, alternator, ignition, circuits, and relays. Through a practical and informal approach featuring hundreds of full-color illustrations, author Rob Siegel takes the fear-factor out of projects like making wire repairs, measuring voltage drops, or figuring out if you have a bad fuel pump relay. Essential tools such as multimeters (DVOM), oscilloscopes, and scan tools are discussed, with special attention given to the automotive multimeter needed to troubleshoot many modern sensors. You'll get step-by-step

troubleshooting procedures ranging from safely jump starting a battery to diagnosing parasitic current drain and vehicle energy diagnosis. And you'll find detailed testing procedures for most problematic electrical components on your European car such as oxygen sensors, crankshaft and camshaft sensors, wheel speed sensors, fuel pumps, solenoids, and actuators. Reading wiring diagrams and decoding the German DIN standard are also covered. Whether you are a DIY mechanic or a professional technician, *The Hack Mechanic Guide to European Automotive Electrical Systems* will increase your confidence in tackling automotive electrical

problem-solving. This book applies to gasoline and diesel powered internal combustion engine vehicles. Not intended for hybrid or electric vehicles.

Principles of Marketing Birkhauser
From GPO Bookstore's Website: Authors with diverse backgrounds in science, history, anthropology, and more, consider culture in the context of the cosmos. How does our knowledge of cosmic evolution affect terrestrial culture? Conversely, how does our knowledge of cultural evolution affect our thinking about possible cultures in the cosmos? Are life, mind, and culture of fundamental significance to the grand story of the cosmos that has generated its own self-

understanding through science, rational reasoning, and mathematics? Book includes bibliographical references and an index.

The Pursuit of Public Journalism is an engaging introduction to the theoretical foundations and practices of the journalistic reform movement known as 'public journalism.' Public journalism - stated briefly - seeks to reinvest journalism with its fundamental responsibilities to

democracy and public life. This book argues against many deeply ingrained practices ranging from journalistic detachment to framing stories via polar conflict in favor of greater civic involvement on the part of journalists. Tanni Haas traces the historical context in which public journalism emerged, develops a philosophy for public journalism, reviews empirical research on public journalism's performance to date and responds to the major criticisms directed at public journalism. He also examines the particular challenges that public journalism poses to curriculum and instruction: how can journalism educators teach students to write

stories useful and of concern to citizens, and how can they encourage citizens to publicly criticize news coverage of given topics? Following review of the major challenges and criticisms of public journalism, the author offers practical solutions for improving public journalism and speculates on public journalism's likely future.

Through ten editions, Fox and McDonald's Introduction to Fluid Mechanics has helped students understand the physical concepts, basic principles, and analysis methods of fluid mechanics. This market-leading textbook provides a balanced, systematic approach to mastering

critical concepts with the proven Fox-McDonald solution methodology. In-depth yet accessible chapters present governing equations, clearly state assumptions, and relate mathematical results to corresponding physical behavior. Emphasis is placed on the use of control volumes to support a practical, theoretically-inclusive problem-solving approach to the subject. Each comprehensive chapter includes numerous, easy-to-follow examples that illustrate good solution technique and explain challenging points. A broad range of carefully selected topics describe how to apply the governing equations to various problems, and explain

physical concepts to enable students to model real-world fluid flow situations. Topics include flow measurement, dimensional analysis and similitude, flow in pipes, ducts, and open channels, fluid machinery, and more. To enhance student learning, the book incorporates numerous pedagogical features including chapter summaries and learning objectives, end-of-chapter problems, useful equations, and design and open-ended problems that encourage students to apply fluid mechanics principles to the design of devices and systems.

This book considers the cultural meanings of death in American journalism and the role of journalism in interpretations and enactments of public grief, which has returned to an almost Victorian level. A number of researchers have begun to address this growing collective preoccupation with death in modern life; few scholars, however, have studied the central forum for the conveyance and construction of public grief today: news

media. News reports about death have a powerful impact and cultural authority because they bring emotional immediacy to matters of fact, telling stories of real people who die in real circumstances and real people who mourn them. Moreover, through news media, a broader audience mourns along with the central characters in those stories, and, in turn, news media cover the extended rituals. Journalism in a Culture of Grief examines this process through a range of types of death and types of news media. It discusses the reporting of horrific events such as September 11 and Hurricane Katrina; it considers the cultural role of obituaries and the instructive work of

coverage of teens killed due to their own risky behaviors; and it assesses the role of news media in conducting national, patriotic memorial rituals.
