Solve problems for a range of applications, including signal processing and communications, image and video processing, control systems, and test and measurement. MathWorks - Solutions - MATLAB & Simulink  $Y = solve$  (eqns, vars) solves the system of equations eqns for the variables vars and returns a structure that

contains the solutions. If you do not specify vars, solve uses symvar to find the variables to solve for. In this case, the number of variables that symvar finds is equal to the number of equations eqns.
