As planet Earth continues to absorb unprecedented levels of anthropogenically induced environmental and climatic change, two similar academic schools of thought have emerged in recent years, both making sustained efforts to explain how and why this state of affairs has evolved. These two disciplines are known as green criminology and earth jurisprudence. Whilst these areas of study can be seen as sub-disciplines of their parent subjects, law and criminology, this book proposes that much can be achieved by authors uniting and collaborating on their academic work. By doing this, it is argued that green criminology stands to benefit from a discipline that places mother nature at the heart of lawmaking and therefore providing a solution to the environmental harms identified by green criminologists. Furthermore, earth jurisprudence will profit from utilising the breadth of academic work produced within the green criminology academic arena. Therefore, this book seeks to unite green criminology and earth jurisprudence in an effort to find solutions to the extraordinary environmental problems that the world now faces.

The Land is the Source of Law brings an inter-jurisdictional dimension to the field of indigenous jurisprudence: comparing Indigenous legal regimes in New Zealand, the USA and Australia, it offers a 'dialogical encounter with an Indigenous jurisprudence' in which individuals are characterised by their rights and responsibilities into the Land. Though a relatively "new" field, indigenous jurisprudence is the product of the oldest continuous legal system in the world. Utilising a range of texts – films, novels, poetry, as well as "law stories" CF Black blends legality and narrative in order to redefine jurisprudencia in indigenous terms. This re-definition gives shape to the jurisprudential framework of the book: a shape that is not just abstract, but physical and metaphysical; a shape that is circular and concentric at the same time. The outer circle is the cosmology, so that the human never forgets that they are inside a universe – a universe that has a law. This law is found in

the second circle which, whilst resembling the ancient Greek law of physis is a law based on relationship. This is a relationship that orders the placing of the individual in the innermost circle, and which structures their rights and responsibilities into the land. The jurisprudential texts which inform the theoretical framework of this book bring to our attention the urgent message that the Djang (primordial energy) is out of balance, and that the rebalancing of that Djang is up to the individual through their lawful behaviour, a behaviour which patterns them back into land. Thus, The Land is the Source of the Law concludes not only with a diagnosis of the cause of climate change, but a prescription which offers an alternative legal approach to global health.

The Land is the Source of the Law Probocell Press

This collection of essays explores the different ways the insights from complexity theory can be applied to law. Complexity theory – a variant of systems theory – views law as an emergent, complex, self-organising system comprised of an interactive network of actors and systems that operate with no overall guiding hand, giving rise to complex, collective behaviour in law communications and actions. Addressing such issues as the unpredictability of legal systems, the ability of legal systems to adapt to changes in society, the importance of context, and the nature of law, the essays look to the implications of a complexity theory analysis for the study of public policy and administrative law, international law and human rights, regulatory practices in business and finance, and the practice of law and legal ethics. These are areas where law, which craves certainty, encounters unending, irresolvable complexity. This collection shows the many ways complexity theory thinking can reshape and clarify our understanding of the various problems relating to the theory and practice of law.

In this book, Michael Lobban argues that a proper understanding of English law and jurisprudence in the period is needed to clarify the nature of common-law practice and the way in which it was envisaged by its practitioners. He questions some commonly-accepted views of the nature of the common law itself and argues that attempts – notably those by Blackstone and Bentham – to expound or to criticize common law in essentially theoretical terms were mistaken. His approach is not a philosophically-based one, but he is concerned with the evolution and spread of judicial ideas which were grounded upon the work of moral and political philosophers, and makes a valuable corrective contribution to our historical understanding of a critically important period in legal history.

A Survey of the Jurisprudence of the European Court of Justice Routledge

The idea of human dominion over nature has become entrenched by the dominant rights-based interpretation of private property. Accordingly, nature is not attributed any inherent value and becomes merely the matter of a human property relationship. *Earth Jurisprudence: Private Property and the Environment* explores how an alternative conception of property might be instead grounded in the ecocentric concept of an Earth community. Recognising that human beings are deeply interconnected with and dependent on nature, this concept is proposed as a standard and measure for human law. This book argues that the anthropocentric institution of private property needs to be reconceived; drawing on international case law, indigenous views of property and the land use practices of agrarian communities, Peter Burdon considers how private property can be reformulated in a way that fosters duties towards nature. Using the theory of earth jurisprudence as a guide, he outlines an alternative ecocentric description of private property as a relationship between and among members of the Earth community. This book will appeal to those researching in law, justice and ecology, as well as anyone pursuing an interest more particularly in earth jurisprudence.

Textbook of Pharmacognosy Oxford University Press, USA

Law moves, whether we notice or not. Set amongst a spatial turn in the humanities, and jurisprudence more specifically, this book calls for a greater attention to legal movement, in both its technical and material forms. Despite various ways the spatial turn has been taken up in legal thought, questions of law, movement and its materialities are too often overlooked. This book addresses this oversight, and it does so through an attention to the materialities of legal movement. Paying attention to how law moves across different colonial and contemporary spaces, this book reveals there is a problem with common law's place. Primarily set in the postcolonial context of Australia - although ranging beyond this nationalised topography, both spatially and temporally - this book argues movement is fundamental to the very terms of common law's existence. How, then, might we move well? Explored through examples of walking and burial, this book responds to the challenge of how to live with a contemporary form of colonial legal inheritance by arguing we must take seriously the challenge of living with law, and think more carefully about its spatial productions, and place-making activities. *Unsettling Place*, this book returns the question of movement to jurisprudence.

With an aging demographic all over the European Union, the European pharmaceutical sector is set to grow in the coming decades. Already today the pharmaceutical industry is a key employer in Europe. At the same time, the pharmaceutical industry is marked by a very expensive research and development phase, which makes strong intellectual property rights crucial to ensure that research for new pharmaceuticals remains commercially interesting. But not only direct threats to intellectual property rights, such as the production of generic pharmaceuticals or the sale of counterfeit pharmaceuticals, pose a threat to those pharmaceutical companies which heavily invest in research

for the development of new products: different prices for identical pharmaceuticals in different member states of the European Community make it economically interesting to buy pharmaceuticals in one member state and sell them abroad. It might even be cheaper to sell reimported pharmaceuticals in the country of origin. This possibility opens a whole new market for reimporters which cuts directly into the profit of the producers. In this thesis we will look at different issues surrounding intellectual property rights in the European pharmaceutical sector by investigating the jurisprudence of the European Court of Justice and the Court of First Instance.

Pharmaceutics is a branch of pharmaceutical science. It is concerned with the process of converting old drugs or a new chemical entity into a new medication which can be used safely by the patients. It is also known as the science of dosage form design, as it deals with the conversion of a pure drug

substance into a dosage form. Pharmaceutical formulation, pharmaceutical manufacturing, physical pharmacy, dispensing pharmacy, pharmaceutical technology and pharmaceutical jurisprudence are some of the branches of pharmaceuticals. Pharmaceutical formulation is a process in which several chemical substances, including the active drug, are combined together for producing a final medicinal product. This book elucidates the concepts and innovative models around prospective developments with respect to pharmaceuticals. It studies, analyzes and upholds the pillars of pharmaceuticals and its utmost significance in modern times. This book will prove to be immensely beneficial to students and researchers in this field.
