At a time when the

traditional media have been reshaped by digital technologies and audiences have fragmented, people are using mediated forms of communication to manage all aspects of their daily lives as well

as for news and entertainment. The Media and Communications in Australia offers a systematic introduction to this dynamic field. Fully updated and expanded, this fifth edition outlines the key media industries – from print, sound and television to film, gaming and public relations – and explains how communications technologies have changed the ways in which they now operate. It offers an overview of the key approaches to the field, including a consideration of Indigenous communication, and features a ‘hot topics’ section with contributions on issues including diversity, misinformation, algorithms, COVID-19,

web series and national security. With chapters from Australia’s leading researchers and teachers in the field, The Media and Communications in Australia remains the most comprehensive and reliable introduction to media and communications from an Australian perspective. It is an ideal student text and a key resource for teachers, lecturers, media practitioners and anyone interested in understanding these influential industries. Algorithms and Architectures for Parallel Processing Advances in Knowledge Discovery and Data Mining Volume 2 of the conference proceedings of the SPE/Antac on 'Plastics

Bridging the Millennia-subtopic of 'Materials', held on the 2-6 May 1999 in New York City, USA.

Eigentlich sollte man längst bei einem Termin sein, doch dann klingelt das Handy und das E-Mail-Postfach quillt auch schon wieder über. Für Sport und Erholung bleibt immer weniger Zeit und am Ende resigniert man ausgebrannt, unproduktiv und völlig gestresst. Doch das muss nicht sein. Denn je entspannter wir sind, desto kreativer und produktiver werden wir. Mit David Allens einfacher und anwendungsorientierter Methode wird beides wieder möglich: effizient zu arbeiten

und die Freude am Leben zurückzugewinnen. Blockchain Springer  
For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce. Proceedings of the 2022 Eurasian OpenSees Days Springer

This book intends to develop cyber awareness and technical knowledge in anyone who is interested in technology by looking at subjects and experiences the average person will have come into contact with in their life. This book aims to provide a complete and comprehensive analysis, technological inputs and case studies for the readers to build their awareness and knowledge, but in a meaningful way which will stay relevant. There are books available on the market, but they primarily discuss theory, and no industry connection or current state-of-the-art technology is presented. By discussing subjects and

experiences that all readers will be familiar with, this book will aid understanding and comprehension of how cyber threats can be noticed, avoided and understood in everyday life. As well as case studies, this book also contains plentiful illustrations and supplementary videos, which will be available via YouTube to complement the information. Giri Govindarajulu is a Chief Information Security officer for Cisco Asiapac and is a 20-year Cisco veteran. Shyam Sundar Ramaswami is the Lead Threat Researcher with the Cisco Talos Threat Intelligence group. Shyam is a two-time TEDx speaker and a teacher of cybersecurity. Dr.

Shriram K. Vasudevan is currently working as Dean of K.

Ramakrishnan College of Technology. He has authored/co-authored 42 books for reputed publishers across the globe and 122 research papers in revered international journals, plus 30 papers for international/national conferences.

The digital transformation of finance and banking enables traditional services to be delivered in a more effective and efficient way but, at the same

time, presents crucial issues such as fast-growing new asset classes, new currencies, datafication and data privacy, algorithmization of law and regulation and, last but not least, new models of financial crime. This book approaches the evolution of digital finance from a business perspective and in a holistic way, providing cutting-edge knowledge of how the digital financial system works in its three main domains: banking, insurance and capital markets. It offers a bird's-eye view of the major issues and developments in these individual sectors. The book begins by examining the wider framework of the subsequent analysis and over the next

three parts, discusses the opportunities, risks and challenges facing the digitalization of these individual financial subsectors, highlighting the similarities and differences in their digitalization agenda, as well as the existing linkages and dependencies among them. The book clarifies the strategic issues facing the development of digital finance in these major subsectors over the coming years. The book has three key messages: that digital transformation changes fundamentally the way financial businesses operate; that individual trades have their own digitalization agenda; and that the state with its regulatory power and central banking

and money has a particularly important role to play. It will be of interest to scholars, students and researchers of finance and banking, as well as policymakers wishing to understand the values and limitations of new forms of digital money.

This reference manual is designed to enable more geophysicists to appreciate static corrections, especially their limitations, their relationship with near-surface geology, and their impact on the quality of final interpreted sections. The book is addressed to those involved in data acquisition (datum static corrections), data processing (datum static and residual static corrections), and

interpretation (the impact that unresolved static corrections, especially the long-wavelength or low-spatial-frequency component, have on the interpretation of the final section). Simple explanations of the underlying principles are included in an attempt to remove some of the mystique of static corrections. The principles involved are illustrated with simple models; these are supplemented with many data examples. This book details differences in approaches that must be considered among 2D, 3D, and crooked-line recordings as well as between P-wave and S-wave surveys. Static corrections are shown to be a simplified yet practical

approach to modeling the effects of the near surface where a more correct wavefield or raypath-modeled method may not be efficiently undertaken. Chapters cover near-surface topography and geology; computation of datum static corrections; uphole surveys; refraction surveys; static corrections—limitations and effect on seismic data processes; residual static corrections; and interpretation aspects. An extensive index and a large list of references are included.

This book highlights the latest advances, innovations, and applications in the field of structural and geotechnical

engineering, as presented by leading international researchers and engineers at the 2nd Eurasian Conference on OpenSees—Open System for Earthquake Engineering Simulation (EOS), held in Turin, Italy, on July 7–8, 2022. The conference was meant to give an overview on the latest developments made with the OpenSees framework as well as to present research and practical outcomes in which OpenSees plays an important role. Conference topics cover cutting-edge applications of OpenSees in the field of structural and geotechnical engineering, the development of new elements and materials, and also the development of new

pre- and post-processors. The contributions, which were selected by means of a rigorous international peer-review process, present a wealth of exciting ideas that will open novel research directions and foster multidisciplinary collaboration among different specialists.

For many centuries people living on volcanoes have known that the outset of seismic activity is often a forerunner of a volcanic eruption. This understanding allowed people living close to the sites of the Mt. Nuovo 1538 eruption at Campi Flegrei, Italy, and of the Mt. Usu 1663 eruption, in Hokkaido, Japan (to

quote only two examples) to flee before the eruptions started. During the second half of the 19th century seismographs were installed on some volcanoes, and the link between seismic and eruptive activity started to be assessed on a firmer scientific basis. The first systematic observations of the correlations existing between seismic activity and volcanic eruptions were probably those carried out at Mt. Vesuvius by Luigi Palmieri in 1856. Palmieri was the Director of Osservatorio Vesuviano and built an electromagnetic seismograph with the aim of "making visible the smallest ground motions by recording them on paper and

indicating direction, intensity and duration". He was able to show the relationship between earthquakes and the different phases of volcanic activity. He identified the harmonic tremor which he indicated was a precursor of volcanic activity: "the characteristic feature of the ground motions preceding eruption is its continuity . . . (before the eruption of 1861) the electromagnetic seismograph began to show a continuous tremor". The Palmieri seismograph was also utilized in Japan until 1883, when it was replaced by the new Gray-Milne seismographs, and, later, by the Omori instruments.

The three-volume set LNAI 11439, 11440, and 11441 constitutes the thoroughly refereed proceedings of the 23rd Pacific-Asia Conference on Knowledge Discovery and Data Mining, PAKDD 2019, held in Macau, China, in April 2019. The 137 full papers presented were carefully reviewed and selected from 542 submissions. The papers present new ideas, original research results, and practical development experiences from all KDD related areas, including data mining, data warehousing, machine learning, artificial intelligence, databases, statistics, knowledge engineering, visualization, decision-making systems, and the emerging

applications. They are organized in the following topical sections: classification and supervised learning; text and opinion mining; spatio-temporal and stream data mining; factor and tensor analysis; healthcare, bioinformatics and related topics; clustering and anomaly detection; deep learning models and applications; sequential pattern mining; weakly supervised learning; recommender system; social network and graph mining; data pre-processing and featureselection; representation learning and embedding; mining unstructured and semi-structured data; behavioral data mining; visual data mining; and knowledge

graph and interpretable data mining.

The four-volume set LNCS 11334-11337 constitutes the proceedings of the 18th International Conference on Algorithms and Architectures for Parallel Processing, ICA3PP 2018, held in Guangzhou, China, in November 2018. The 141 full and 50 short papers presented were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on Distributed and Parallel Computing; High Performance

Computing; Big Data and Information Processing; Internet of Things and Cloud Computing; and Security and Privacy in Computing.

*Catalog of Copyright Entries. Third Series* CRC Press

Includes abstracts of scientific and technical papers published in other Middle East countries.

**Helping Employees Manage Careers** SEG Books

This three-volume set constitutes selected papers presented during the 17th International Conference on Computer Science and Education, ICCSE 2022, held in Ningbo, China, in August 2022. The 168 full papers and 43 short papers presented were thoroughly reviewed and selected

from the 510 submissions. They focus on a wide range of computer science topics, especially AI, data science, and engineering, and technology-based education, by addressing frontier technical and business issues essential to the applications of data science in both higher education and advancing e-Society. *Catalog of Books and Reports in the Bureau of Mines Technical Library, Pittsburgh, Pa* Cambridge University Press

Written by experts in the field, this is a complete support system for evaluating and enhancing in-house career development programs. It presents 52 ready-made implementation tools

to answer every need, from workshop planning to employee record keeping.

### **The Digital Revolution in Banking, Insurance and Capital Markets**

Springer Nature

The dominance of trusted intermediaries could be weakened by blockchain, a distributed ledger technology, one of the functions of which is to constitute timestamped proofs by replacing inter-individual trust with algorithmic trust. Blockchain self-executing smart contracts allow us to rethink the practice in the domain of e-commerce, interbank communication, fundraising (and ICOs), justice (timestamping evidence, acts authenticated by

blockchain) and businesses in numerous sectors (entertainment, AI, health, real estate, tourism, transport, etc.) which attempt to propose new services by benefiting from blockchains. This book aims to put into perspective the technical innovations and the uses brought about by blockchain,

by identifying that which has a medium- or long-term impact, all while taking into account the social, economic, judicial and administrative resistances that are likely to develop. The Saturday Review of Politics, Literature, Science and Art A bibliographical history of newspaper development.
