C for Engineers and Scientists Course Technology

This volume contains the proceedings of the 10th International Conference on Tools and Algorithms for the Construction and Analysis of Systems (TACAS 2004). TACAS 2004 took place in Barcelona, Spain, from March 29th to April 2nd, as part of the 7th European Joint Conferences on Theory and Practice of Software (ETAPS 2004), whose aims, organization, and history are detailed in a foreword by the ETAPS Steering Committee Chair, José Luiz Fiadeiro. TACAS is a forum for researchers, developers, and users interested in rigorously based tools for the construction and analysis of systems. The conference serves to bridge the gaps between different communities including, but not limited to, those devoted to formal methods, software and hardware verification, static analysis, programming languages, software engineering, real-time systems, and communication protocols that share common interests in, and techniques for, tool development. In particular, by providing a venue for the discussion of common problems, heuristics, algorithms, data structures, and methodologies, TACAS aims to support researchers in their quest to improve the utility, reliability, flexibility, and efficiency of tools for building systems.

TACAS seeks theoretical papers with a clear link to tool construction, papers

describing relevant algorithms and practical aspects of their implementation, -pers giving descriptions of tools and associated methodologies, and case studies with a conceptual message.

Designed to teach ANSI C on the UNIX system, this text begins with a chapter on UNIX for C Programmers that facilitates hands-on learning of C in realistic situations. The early stages of the text build a strong foundation for beginners, which allows them to achieve extraordinary programming proficiency later in the course. All C constructs are covered comprehensively. The programming, testing, debugging, and programming maintenance environments for C on UNIX receive extensive coverage, as do UNIX utilities for C programming. Thinking in C sections address programming style and rules of thumb for writing better C programs.
