### Automotive Climate Control 116 Years of Progress Dundurn

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission

standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well

underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies

for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Concept & Show Cars, 1932-1961 Dundurn  
As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz -- rich cars, poor quality. There's only one Saturn you should buy. Toyota -- enough apologies: "when you mess up, 'fess up."

Canada's automotive "Dr. Phil" says there's never been a better time to buy a new car or truck. For deals on wheels, 2013 will be a "perfect storm." There's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar, a worldwide recession driving prices downward, and a more competitive Japanese auto industry that's still reeling from a series of natural disasters. In addition to lower prices and more choices, 2013 car buyers will see more generous cash rebates, low financing rates, bargain leases, and free auto maintenance programs. Buy, sell, or hold? Which cars and trucks are "wallet-friendly" and can easily last 15 years? Which vehicles offer the most features to best accommodate senior drivers? Do ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers? Is GM's 2013 Volt electric car destined to become an electric Edsel? These questions and more are answered in this informative guide.

As Toyota skids into an ocean of problems and uncertainty continues in the U.S. automotive industry, Lemon-Aid Used Cars and Trucks 2011-2012 shows buyers how to pick the cheapest and most reliable vehicles from the past 30 years. Lemon-Aid guides are unlike any other car and truck books on the market. Phil Edmonston, Canada's automotive Dr. Phil for 40 years, pulls no punches. Like five books in one, Lemon-Aid Used Cars and Trucks is an exposé of car scams and gas consumption lies; a do-it-yourself service manual; an independent guide that covers beaters, lemons, and collectibles; an archive of secret service bulletins granting free repairs; and a legal primer that even lawyers can't beat! Phil delivers the goods on free fixes for Chrysler, Ford, and GM engine, transmission, brake, and paint defects; lets you know about Corvette and Mustang tops that fly off; gives the lowdown on Honda, Hyundai, and Toyota engines and transmissions; and provides the latest information on computer module glitches.

*Motoring the Future: VW and Toyota Vying for Pole Position* deals with the challenges facing the global car industry today, analyzing Volkswagen and Toyota, with some surprising results. The book provides insights into each car manufacturer's corporate culture, products, production, leadership and technologies, as well as some thoughts on the future of the car. These two opponents vying for pole position could hardly be more different: Toyota, with a focus on manufacturing excellence, is dominant in its home market, the USA and south-east Asia, whereas VW, with its strategy of product excellence, leads in western Europe, Brazil and China. Industrial dominance will be important to them in the future, with both companies needing to master the next steps in product and manufacturing excellence. The race is by no means over, offering a deep insight into the challenges for carmakers moving away from fossil fueled combustion to alternative energy vehicles for the mass market. Major players are trying to answer the key question: How will the car of the future look? VW and Toyota now need to keep ambitious competitors at bay. Timing is everything: US manufacturers are focused on their own revival; Korean and Chinese players are progressing surprisingly fast. However, it looks like the battle for pole position will likely remain between Toyota and VW. *Motoring the Future* offers updates on Volkswagen's and Toyota's next generation vehicles, both plotting a new course into the future. In this thoroughly revised edition the book, new facts and material have extended the scope to American manufacturers and to new competitors from the Far East.

This is the first significant publication to explore the output of Matt Keegan, the New York-based artist known for his work across mediums, as well as independent publishing including the acclaimed editioned art journal *North Drive Press*. This monograph expands on a recent solo exhibition by the artist at Rogaland Kunstsenter; Stavanger, Norway, titled "Portable Document Format." The show was organized as an idiosyncratic retrospective, with Keegan remaking sculptures dating from 2006 to 2015, initially fabricated in Sheetrock and steel, in cardboard. Like the exhibition, the publication serves both as a project and a reference for the artist's work. Essays by Tom McDonough and John Miller theorize Keegan's production, while interviews with Sara VanDerBeek and Anna Craycroft underscore the artist's ongoing engagement with his peer group. Furthered by contributions from colleagues Uri Aran, Leslie Hewitt and James Richards, situated alongside full-color installation photos and reproductions of work from the past decade, *Matt Keegan: OR* provides a solid introduction and layered overview of the artist's multifarious practice.

Electric drive vehicles (EDVs) are seen on American roads in increasing numbers. Related to this market trend and critical for it to increase are improvements in battery technology. *Battery Technology for Electric Vehicles* examines in detail at the research support from the U.S.

Department of Energy (DOE) for the development of nickel-metal-hydride (NiMH) and lithium-ion (Li-ion) batteries used in EDVs. With public support comes accountability of the social outcomes associated with public investments. The book overviews DOE investments in advanced battery technology, documents the adoption of these batteries in EDVs on the road, and calculates the economic benefits associated with these improved technologies. It provides a detailed global evaluation of the net social benefits associated with DOE's investments, the results of the benefit-to-cost ratio of over 3.6-to-1, and the life-cycle approach that allows adopted EDVs to remain on the road over their expected future life, thus generating economic and environmental health benefits into the future.
