Financial Engineering in Islamic Finance the Way Forward Walter de Gruyter GmbH & Co KG

This book discusses carefully selected topics in Islamic banking and finance (IBF) in South Eastern Europe (SEE) as one of the fastest growing areas in global finance. IBF originated within various Islamic banks, Islamic windows, investment funds, Takaful companies, and other financial institutions and has resulted in various global products. Although it is still in an early phase in SEE, IBF has developed rapidly in the last decade and has created a need for research on related topics, from the fundamental principles of IBF to the SCR, endowments and investment instruments to Islamic banking practices. This is our second book published as a result of the Sarajevo Islamic and Finance conferences (SIFEC). This conference traditionally gathers Islamic banking, economics, and finance academicians, experts, and students all over the world who discuss a wide range of topics in this field, focusing on the SEE. Consisting of seven chapters presenting original research, this book is a valuable resource for researchers as well as for practitioners and potential investors in IBF, especially in SEE.

Contemporary Islamic Finance Edinburgh University Press

This book examines the idiosyncratic risk, risk-return trade off and payout decisions for faith-based investors including Islamic Shariah compliant and ethical investors, who may be paying a cost for their belief system in the form of under-diversification of portfolios and

additional monitoring costs owing to their unique risk profile. There is a growing number of investors who are motivated by social, environmental, and ethical considerations in their investment decisions. They apply a set of investment screens to include or exclude assets based on ecological, social, corporate governance or ethical criteria. This socially responsible investment (SRI), ethical investment or sustainable investment style is prevalent since religious or ethical values matter to investors even if the risk-adjusted returns are lower than those of conventional investments. The author addresses these issues for Islamic and socially responsible portfolios in detail by using proprietary data of Dow Jones Indices from the United States. The findings are a unique and valuable addition to the existing corporate finance, portfolio management and Islamic finance literature.

This is how Islamic Banking really works Volume 3 of the *Islamic Banking in Practice* series covers the three main areas of Retail Banking, Risk Management and Structured Investments. Key products in all of these areas are discussed and explained in detail, covering the different types of contracts and structures used in the Islamic Banking and Finance sector. The journey in transforming classical contracts (such as Murabaha, Mudarabah, Wakala, Ijara and so on) into finished products that are executed, is a compelling one. This includes the transformation of inherent risks to suit the parties involved. This process of transformation highlights the perpetual conflict that exists within the industry - how to utilise classic contractual forms to deliver (overwhelmingly) products that are priced at interest.

Rethinking Islamic Finance Springer
Islamic finance has grown exponentially since 1963 and has reached more than 70 countries around the world with the asset size of about \$2.5 trillion. The Islamic financial system today comprises a sizable asset base and there is evidence of sustained demand for Islamic financial products and services in the global market, with demand outstripping supply. This book provides a new source of understanding of the Islamic financial products in view of facilitating academia, industrialists, professionals, product designers, students and policymakers globally. There is a mass of literature on Islamic finance available to the market, but very little research is found in the form of book exclusively on Islamic financial products and their structures. Thus, this book is a timely contribution to the global market with Islamic financial product solutions.

How to Manage Risk and Improve Profitability John Wiley & Sons

A practical and accessible guide to Islamic finance that helps demystify the differences with conventional banking, enabling practitioners to develop Sharia compliant products for customers. The Islamic Finance industry is estimated to be worth \$1.2 trillion and is growing globally at over 10% per year. Mastering Islamic Finance will give practitioners an understanding of Islamic finance, from the basic techniques, through to advanced applications. Helping to demystify and clarify the differences with conventional banking, it will enable practitioners to develop Sharia compliant products for customers. According to Sharia law there are strict rules on how financial services and products can be designed; in Islamic Finance money cannot make money and the subject of the finance must be an asset or a verifiable, real trade or business activity. Sharia compliant financial instruments have been devised to enable Muslims to abide by the principles of Islam and still make the most of their money. Mastering Islamic Finance will equip readers with an understanding of Islamic financial instruments so they can sensibly apply them in practice. For each instrument there is a definition of the concept and how it differs from its equivalent in conventional banking. There are also examples and case studies to highlight practical applications.

Asia's demand for second-generation financial institutions and markets needs to be met in order for the region's further development to be sustained. This book provides a compelling, fact-

based assessment of current practices and regulations in Asia's financial institutions and markets and carefully documents the exciting opportunities and challenges that lie ahead in the region's financial systems. This book differs in design from typical treatments of financial institutions and markets because its focus is on Asia rather than using the US model (in terms of market configurations or products) as a benchmark, and it takes a contemporary and forward-looking view of financial markets. Examples of practice from Asia are used to illustrate major accepted themes in finance and financial regulation. To the extent that Asia's main economies share characteristics that are distinct, for example, in the relationship between government and the banking sector, or in aspects of corporate governance, the book will discuss the consequences for market operation and intermediation. The book's carefully structured facts and rigorously argued analysis carry important implications both for students in business and law and for professionals new to financial markets in Asia. It will change the way that Asian financial markets and institutions is taught in universities as well as provide a valuable resource for professionals working in finance in Asia.
