A Java Notebook Addison-Wesley

This is a book about a code and about coding. The code is a case study which has been used to teach courses in e-Science at the Australian National University since 2001. Students learn advanced programming skills and techniques in the Java language. Above all, they learn to apply useful object-oriented design patterns as they progressively refactor and enhance the software. We think our case study, EScope, is as close to real life as you can get! It is a smaller version of a networked, graphical, waveform browser which is used in the control rooms of fusion energy experiments around the world. It is quintessential "e-Science" in the sense of e-Science being "computer science and information technology in the service of science". It is not, specifically, "Grid-enabled", but we develop it in a way that will facilitate its deployment onto the Grid. The standard version of EScope interfaces with a specialised database for waveforms, and related data, known as MDSplus. On the accompanying CD, we have provided you with software which will enable you to install MDSplus, EScope and sample data files onto Windows or Linux computers. There is much additional software including many versions of the case study as it gets built up and progressively refactored using design patterns. There will be a home web-site for this book which will contain up-

to-date information about the software and other aspects of the case study.

Comparative Programming Languages identifies and explains the essential concepts underlying the design and use of programming languages and provides a good balance of theory and practice. The author compares how the major languages handle issues such as declarations, types, data abstraction, information hiding, modularity and the support given to the development of reliable software systems. The emphasis is on the similarities between languages rather than their differences. The book primarily covers modern, widely-used object-oriented and procedural languages such as C, C++, Java, Pascal (including its implementation in Delphi), Ada 95, and Perl with special chapters being devoted to functional and logic languages. The new edition has been brought fully up to date with new developments in the field: the increase in the use of object-oriented languages as a student's first language; the growth in importance of graphical user interfaces (GUIs); and the widespread use of the Internet.

Zentrale Themen des Stahlbau-Kalender 2019 sind Verbindungen im Stahlbau sowie Digitales Planen und Bauen. Verbindungen sind ein Innovationstreiber im Stahlbau. Die richtige Auswahl und Detailausbildung kann die Wirtschaftlichkeit von Stahlkonstruktionen erhöhen. Das Buch stellt anwendungsbereites Wissen mit zahlreichen Beispielen zur Verfügung. Auf die Methoden und Vorgehensweisen zur Bemessung und konstruktiven Durchbildung verschiedener Verbindungsarten wird in sechs Beiträgen ausführlich eingegangen. Die Verwendung vorgefertigter Zugstabsysteme bei filigranen Stahl-Glas-Konstruktionen für Fassaden, Dachtragwerke oder Fußgängerbrücken hat in den letzten Jahren zugenommen. Besonders wichtig für die Praxis sind z. B. die neuen Entwicklungen bei vorgespannten geschraubten Verbindungen. Auch Setzbolzen und Metallschrauben weisen eine breite Anwendungspalette im Stahlbau und Metallleichtbau auf. Gussknoten ermöglichen aufgrund der freien Formbarkeit den optimalen Einsatz von Hohlprofilen, auch bei geometrisch komplizierten

Tragstrukturen. Mit tragenden Klebverbindungen werden neuartige Konstruktionen und Mischbauweisen im Konstruktiven Ingenieurbau hervorgebracht. Damit einher geht das Erfordernis des werkstoffgerechten Konstruierens als Voraussetzung für dauerhafte und wirtschaftliche Tragwerke. Was digitales Planen und Bauen konkret für den Stahlbau und die Werkstattfertigung bedeutet, wird in drei praxisbezogenen Beiträgen dargestellt. Der Stahlbau-Kalender dokumentiert und kommentiert verlässlich den aktuellen Stand des deutschen Stahlbau-Regelwerkes. Das Buch ist ein Wegweiser für die richtige Berechnung und Konstruktion im gesamten Stahlbau mit neuen Themen in jeder Ausgabe. Herausragende Autoren aus der Industrie, aus Ingenieurbüros und aus der Forschung vermitteln Grundlagen und geben praktische Hinweise.

Learning a programming language on you own can be daunting. Programming books can be confusing and incomplete. Program listings often do not work until you have mucked around using trial and error. I like to use books as reference after I have read them. Invariably, none of the books have the particular information that I want, nor do they have references to other information sources. "Java Programming -- What Do You Want To Do?" changes all that. Inside there are clear instructions on how to do what you want to do -- Basic structures, graphics programming with AWT and NetBeans, Advanced structures, test preparation, networking, cell phone programming and much more.
