'This is an excellent book. It has been really helpful with my communication teaching.' Mrs Sarah Young, Faculty of Health & Social Care, University of The West of England
The new edition of this well regarded book will be useful to you for your entire course. It introduces the underpinning theory and concepts required for the development of first class communication and interpersonal skills. The authors have provided a simple-to-read overview of the central topics that provide a solid foundation

in this crucial area of nursing practice. Through scenarios and theory summaries the book will teach you skills that you can immediately implement on your placements and regular activities break up the text and encourage critical thinking and reflection - two vital graduate skills.

Oxford University Press, USA
Patient-Centered Medicine: A Human Experience emphasizes the health professional's role in caring for patients as unique individuals by focusing on the patients' psychological and social realities as well as their biological needs. The book concerns itself with caring for the whole patient, and outlines the basic principles involved in developing a biopsychosocial approach to medical practice. This is a volume of guidelines that will help medical students and clinicians develop and master basic attitudes and skills essential to providing empathic and

comprehensive medical care. As Norman Cousins writes in the foreword, 'The authors understand and repeatedly demonstrate in this book, that the patient-physician relationship is a powerful, sometimes mysterious, frequently healing interaction between human beings. It is the person of the doctor and the presence of the doctor-just as much and frequently more than-what the doctor does that creates an environment for healing. The physician represents restoration. The physician holds the lifeline.' Since the book's original publication by University Park Press in 1984, greater awareness and acceptance of the biopsychosocial model has occurred, and medical schools are now working to fully integrate psychosocial education into the clinical curriculum.

This book presents a

detailed overview of the healthcare environment in Viet Nam. Given the general lack of understanding of healthcare in the Vietnamese context, it discusses the background and history, current status and the future of healthcare in the country. The first part of the book provides a summary of the current state of Vietnamese healthcare, incorporating discussions on the training and professional practice environment and the development, implementation and impact of national insurance policies. In addition, it highlights the cultural aspects of health provision and behaviours, technology integration and health trends from a number of angles based on standard global reporting dimensions. The second part elaborates on the 5-year strategic plan for national healthcare management and the top 5 barriers to meeting these planned objectives. It documents key investors and project objectives and outcomes, as well as the top 10 health issues in Vietnam including an overview of national and international initiatives to tackle these issues, addressing

financial and social burdens in the process. In the third part, the book outlines the opportunities and barriers for improvement in healthcare outcomes for Viet Nam, providing evidence to support future work by local or international researchers. It is a fundamental text for anyone looking to work or research in the Vietnamese healthcare environment and provides an outline for project planning and targeted programs of work to achieve measureable improvements in Viet Nam.

Ignorance is mostly framed as a void, a gap to be filled with appropriate knowledge. In nursing and health care, concerns about ignorance fuel searches for knowledge expected to bring certainty to care provision, preventing risk, accidents, or mistakes. This unique volume turns the focus on ignorance as something productive in itself and works to understand how ignorance and its operations shape what we do and do not know. Focusing explicitly on

nursing practice and its organization within contemporary health settings, Perron and Rudge draw on contemporary interdisciplinary debates to discuss social processes informed by ignorance, ignorance's temporal and spatial boundaries, and how ignorance defines what can be known by specific groups with differential access to power and social status. Using feminist, postcolonial and historical analyses, this book challenges dominant conceptualizations and discusses a range of "nonknowledges" in nursing and health work, including uncertainty, abjection, denial, deceit and taboo. It also explores the way dominant research and managerial practices perpetuate ignorance in healthcare organisations. In health contexts, productive forms of ignorance can help to future-proof understandings about the management of healthy/sick bodies and those caring for them. Linking these considerations to nurses' approaches to challenges in practice, this book helps to unpack the power situated in the use of ignorance and pays

special attention to what is safe or unsafe to know, from both individual and organisational perspectives. On the Politics of Ignorance in Nursing and Health Care is an innovative read for all students and researchers in nursing and the health sciences interested in understanding more about transactions between epistemologies, knowledge building practices and research in the health domain. It will also be of interest to scholars involved in the interdisciplinary study of ignorance.

Industry 4.0, AI, and Data Science IGI Global

The rise of globalized business has created a world village wherein ideas and industry transcend national boundaries. Unfortunately, the resulting increase in travel has accelerated the transmission of diseases, generating a surge in worldwide epidemics and increasing the necessity of innovative strategies for prevention, containment, and communication related to global health issues. *Transforming Public Health in Developing Nations* showcases the latest developments,

trends, and challenges within the field of international public health. Featuring empirical studies, case studies, reviews, and discussion notes, this authoritative text highlights diverse, important global health issues, making it an essential resource for professionals, researchers, and academics seeking insight on the latest developments in contemporary healthcare. This reference work highlights a broad scope of current issues including global epidemics, worldwide health systems, mental health issues in developing nations, barriers to healthcare, sanitation and infection, cultural diversity in healthcare administration, cultural perceptions of reproductive health issues, international health costs and budgets, and health information technology.

The aim of this book is to provide insight into Data Science and Artificial Learning Techniques based on Industry 4.0, conveys how Machine

Learning & Data Science are becoming an essential part of industrial and academic research.

Varying from healthcare to social networking and everywhere hybrid models for Data Science, AI, and Machine Learning are being used. The book describes different theoretical and practical aspects and highlights how new systems are being developed. Along with focusing on the research trends, challenges and future of AI in Data Science, the book explores the potential for integration of advanced AI algorithms, addresses the challenges of Data Science for Industry 4.0, covers different security issues, includes qualitative and quantitative research, and offers case studies with working models. This book also provides an overview of AI and Data Science algorithms for readers who do not have a strong mathematical background.

Undergraduates, postgraduates, academicians, researchers, and industry professionals will benefit from this book and use it as a guide.

How do you perceive your cultural identity? All of us are shaped by the cultures we interact with and the cultural backgrounds and ethnicities that are part of

our heritage. Take a dynamic approach to the study of culture and health care relationships. Dr. Marilyn A. Ray shows us how cultures influence one another through inter-cultural relationships, technology, globalization, and mass communication, and how these influences directly shape our cultural identities in today's world. She integrates theory, practice, and evidence of transcultural caring to show you how to apply transcultural awareness to your clinical decision making. Go beyond common stereotypes using a framework that can positively impact the nurse-patient relationship and the decision-making process. You'll learn how to deliver culturally competent care through the selection and application of transcultural assessment, planning and negotiation tools for interventions.

Transforming Public Health in Developing Nations Learning Matters

A practice-based guide to applying the principles of human-centered design to real-world health challenges; updated and expanded with post-COVID-19

innovations. This book offers a practice-based guide to applying the principles of human-centered design to real-world health challenges that range from drug packaging to breast cancer detection. Written by pioneers in the field—Bon Ku, a physician leader in innovative health design, and Ellen Lupton, an award-winning graphic designer—the book outlines the fundamentals of design thinking and highlights important products, prototypes, and research in health design. This revised and expanded edition describes innovations developed in response to the COVID-19 crisis, including an intensive care unit in a shipping container, a rolling cart with intubation equipment, and a mask brace that gives a surgical mask a tighter seal. The book explores the special overlap of health care and the creative process, describing the development of such products and services as a credit card-sized device that allows patients to generate their own electrocardiograms; a mask designed to be worn with a hijab; improved emergency room signage; and a map of racial

disparities and COVID-19. It will be an essential volume for health care providers, educators, patients, and designers who seek to create better experiences and improved health outcomes for individuals and communities.

Patient safety and quality improvement in health care remain a global priority. Subpar performance in health care, however, is still common more than a decade after the christening of patient safety in Africa. The core principle of safety and quality improvement

systems is to identify and assess the root cause of failures in order to learn from them and devise a means to improve and to avoid recurrence. This book is designed to encourage, facilitate and empower healthcare workers in the development and implementation of strategically driven patient safety and quality improvement initiatives for safer healthcare systems and healthcare facilities in low- and middle-income countries (LMICs) of Africa. It also highlights some of the profound challenges and barriers to designing and implementing patient safety and quality improvement interventions or programmes in the region and reiterates the need to remain focused and determined to work out solutions with confidence and overcome these barriers. In the book, chapters highlight six essential components crucial for achieving evolutionary progress in safety and quality improvement in a healthcare system: Standard operating procedure Audit Research Safety management Quality management Evaluation Practical steps

in planning and conducting these six essential components are outlined with some specific features to aid learning and facilitate their implementation. The authors have experience and expertise in the medical practice gained in Africa and a decade of knowledge and experience from consultancy work in safety and quality improvement in health care within and outside the region. Essentials for Quality and Safety Improvement in Health Care: A Resource for Developing Countries is authored for both medical professionals and those from other professions who are interested in and enthusiastic about patient safety and healthcare quality and therefore willing to build a career in this field. It is relevant to all health institutions, health and non-health workers, and can be used as a checklist while rendering quality and safe health care.

On the Politics of Ignorance in Nursing and Health Care Elsevier Health Sciences
This volume illustrates ongoing discussions in and about the medical

humanities with studies on different approaches to the relationship between medical science and practice and the humanities, including reflections based on fiction, art, history, socio-economic and political concerns, architecture and natural landscapes. The book explores the ways in which healthcare and medical practice can be positively influenced by removing the focus from the technical knowledge of the medical practitioner. It offers innovative perspectives on spaces for healing, traces attitudes and beliefs in relation to illnesses and their treatment throughout history (including intimations of the future), and interrogates cultural attitudes to illness, doctoring and patients through the lens of fiction. Based on the premise that more interdisciplinary work between medical and non-medical professionals is needed, the chapters contained in this volume contribute to an ongoing dialogue between medicine and the humanities that continues to enrich both disciplines.
