The papers in this volume present a quite critical assessment of contingent valuation (CV). CV is a survey method that attempts to estimate individual values for economic goods by asking people hypothetical questions about their willingness to pay for such goods. In economics, CV has previously been studied almost solely by economists specializing in environmental economics. This book, however, reports research which is mainly from economists with specialities in economic theory, econometrics, and public finance, rather than from the more narrowly focused research of environmental economists. In addition, the research of specialists in psychology, market research, and litigation is included.

Risk assessment has become the backbone of Health and Safety management in the UK and elsewhere. Employers have a legal duty to prove that risk assessments have been carried out and precautions have been implemented as far as (reasonably) practicable. Mike Bateman demystifies the risk assessment process and how it relates to UK legislation. He covers both the general techniques and the assessment of specific risks, such as hazardous substances (COSHH), noise, manual handling, DSE workstations, PPE, fire, asbestos and work at height. The book is designed to be user-friendly rather than overly legalistic or academic and tells the reader how to go about risk assessment,

not just what the legislation requires. It contains numerous checklists, forms and worked examples for a variety of hazards and industries. This edition has been updated to take into account the impact of the following regulations on risk assessments: \* Work at Height Regulations 2005 - full new chapter \* Noise at Work Regulations 2006 \* Regulatory Reform (Fire Safety) Order (RRFSO) 2006 \* Revisions to Construction (Design and Management) (CDM) Regulations Mike Bateman runs his own health and safety consultancy and specialises in risk assessments. Risk assessment is the key to successful management of health and safety at work. Risk assessments are carried out in order to quantify and evaluate the significance of workplace hazards so that appropriate control measures can be put in place. Usually, a written record of the assessment is required, detailing the following information: \* The hazards - and how much risk is associated. \* The risk - with appropriate control measures. \* Deadlines - to follow-up the risk assessment to ensure the risk is managed. Failure to carry out risk assessments - punishable by law - is often due to lack of a suitable risk assessment system. Tolley's Risk Assessment Workbook - Utilities provides that system, both in the form of key background information on how to carry out a risk assessment - understanding relevant

legislation and regulations – but most importantly by providing: \* Checklists – highlighting key industry-specific hazards and control measures. \* Questionnaires – highlighting key questions the risk assessor should ask when analysing the risk posed by the hazard. \* Action Plans – to ensure the risk assessment is followed up and completed. The Workbook offers a practical risk assessment system: it shows you how to comply with the law and gives you the foundations of a logical procedure that can be understood easily, put into place quickly where necessary and adapted to your organisation's needs. Tolley's Risk Assessment Workbooks is a series of practical Workbooks providing you with all the information you need to conduct risk assessments in industry-specific areas including: Manufacturing, Retail, Leisure, Education, Offices, and Construction. A special Risk Assessment Workbook on Stress has also been developed in order to facilitate management of this issue which is of key concern to all organisations.
