Entrepreneurship is a phenomenon of tremendous societal importance. It is also an elusive phenomenon, and researching entrepreneurship is therefore fun, fascinating—and frustrating at times. In *Researching Entrepreneurship*, one of the most highly recognized entrepreneurship scholars shares in a personal and readable way his rich experience and ideas on how entrepreneurship can or should be researched. After a comprehensive treatment of entrepreneurship as societal phenomenon and scholarly domain, the core chapters of the book

discuss design, sampling, operationalization and analysis issues on several levels of analysis: individual, venture, firm, industry, region and nation. The author provides numerous examples of problems and solutions from real research projects, as well as experienced-based suggestions for further improvements in future work. The book is targeted primarily at doctoral students and other (relative) newcomers to the field of entrepreneurship research. However, taking a fresh, reflective perspective and looking beyond research conventions, it should provide potential for inspiration and food for thought also for experienced entrepreneurship researchers. Moreover, while the examples are taken from entrepreneurship research, the book provides a unique "experienced empirical researcher" (rather than "textbook method expert") treatment of issues that are of equal relevance

across the social sciences. This goes for topics such as the role of theory; qualitative vs. quantitative research; validity checking; statistical inference, and replication. Per Davidsson is Professor in Entrepreneurship at Brisbane Graduate School of Management, QUT, Australia, and Jönköping International Business School, Sweden. He is also Chair of the Research Committee of the Entrepreneurship Division of the (American) Academy of Management.

### **Facilitating University Spin-off Ventures** Entrepreneurship A Process Perspective

Towards a Psychology of Entrepreneurship examines a theory of entrepreneurship, its empirical base and its implications. First, it argues that a psychological approach is necessary to understand entrepreneurship. Second, it argues that any theory of entrepreneurship should use active actions as a starting point - entrepreneurship is the epitome of an active agent in the market, rather than a reactive agent. Third, it discusses an action regulation theory to better understand the psychology of entrepreneurship. Fourth, it provides examples how this theory can help to understand entrepreneurial success. Finally, it suggests intervention programs to help entrepreneurs to be successful at growing their organizations. Towards a Psychology of Entrepreneurship presents a descriptive definition of the entrepreneur. It also emphasizes that entrepreneurship does not necessarily imply the start-up and growth of business organizations but is a more general phenomenon of starting social organizations and changing organizations. Thus, it also includes social entrepreneurs in its definition of the entrepreneur - thus, founders of social service organizations are considered

part of the entrepreneurship landscape.

**Value Creation Within Societal Entrepreneurship** Cengage Learning

Why do some individuals decide they want to create businesses and then actually do so? Why do others decide against this course of action, even though they appear to have what it takes to succeed? These two questions were among the first that researchers in the field of entrepreneurship tried to answer. Recently, it seems that the problem is much more difficult to solve than it first appeared thirty years ago. The venture creation phenomenon is a complex one, covering a wide variety of situations. The purpose of this book is to improve our understanding of this complexity by offering both a theory of the entrepreneurial process and practical advice on how to start a new business and manage it effectively. Entrepreneurship and New Value Creation is a fascinating, research-driven book that will appeal to graduate students, researchers and reflective practitioners concerned with the dynamics of the entrepreneurial process.

Entrepreneurship is essential for international social and economic well-being, as new ventures are the dominant source of job creation, market innovation, and economic growth in many societies. In this book, a noted group of researchers use findings, methods, and theories of modern psychology as the basis for gaining important, new insights into entrepreneurship--and into the hearts and minds of the talented, passionate professionals who create new business ventures. The Psychology of

Entrepreneurship, a volume in the SIOP Organizational Frontiers Series, is the first book written about the psychology of entrepreneurship, and includes over 60 research questions to guide industrial organizational psychology, organizational behavior, and entrepreneurship research about entrepreneurs. It seeks to answer questions such as, how and why do some people, but not others, recognize opportunities, decide to start new ventures, and organize successful, rapidly growing new ventures? Some topics addressed include: methods to help researchers explore the domain of entrepreneurship research; the entire process of starting a new business; characteristics of the individual entrepreneur; the history of entrepreneurship education; the cross-cultural effects of entrepreneurship; and the viewpoints of seasoned psychologists who analyze current entrepreneurship research methods. This book will appeal to teachers, students, and researchers in the areas of industrial organizational psychology, organizational behavior, entrepreneurship, and management.

Entrepreneurship is largely considered to be a positive force, driving venture creation and economic growth. Critical Perspectives on Entrepreneurship questions the accepted norms and dominant assumptions of scholarship on the matter, and reveals how they can actually obscure important questions of identity, ideology and inequality. The book's distinguished authors and editors explore how entrepreneurship study can privilege certain forms of economic action, whilst labelling other, more collective forms of organization and exchange as

problematic. Demystifying the archetypal vision of the white, male entrepreneur, this book gives voice to other entrepreneurial subjectivities and engages with the tensions, paradoxes and ambiguities at the heart of the topic. This challenging collection seeks to further the momentum for alternate analyses of the field, and to promote the growing voice of critical entrepreneurship studies. It is a useful tool for researchers, advanced students and policy-makers.

Entrepreneurship Routledge

The entrepreneur has been neglected over the years in formal economic theorizing. Previously there has been only eclectic

theories such as human capital theory and network dynamics which discuss certain perspectives of entrepreneurial behaviour. This insightful book closes this gap in entrepreneurship literature. Inspired by modern physics, author Thomas Grebel brings together an evolutionary methodology, along the way implicating quantum, graph, and percolation theory. Here, Grebel has provided a synthesis of all the main theories of entrepreneurship. Taking an interdisciplinary approach to the subject, this fascinating book opens up new ideas in modelling and the original thinking contained within will be of interest to all those working in the area of business and management as well as those in economics.

ÓDaniel Hjorth is justifiably famous for thinking differently about those things Ówe all knowÓ, and this Handbook adds fuel to that fire. The Handbook reasserts the intellectual and practical primacy of organizational creation as the driving force of entrepreneurship. By getting some of the best minds in entrepreneurship to explore and speculate on the organizational aspects of entrepreneurship, this Handbook reframes and repositions entrepreneurship as the organizing trope for the postindustrial age.
