The world's leading economies are facing not just one but many crises. The financial meltdown may not be over, climate change threatens major global disruption, economic inequality has reached extremes not seen for a century, and government and business are widely distrusted. At the same time, many people regret the consumerism and social corrosion of modern life. What these crises have in common, Diane Coyle argues, is a reckless disregard for the future—especially in the way the economy is run. How can we achieve the financial growth we need today without sacrificing a decent future for our children, our societies, and our planet? How can we realize what Coyle calls "the Economics of Enough"? Running the economy for tomorrow as well as today will require a wide range of policy changes. The top priority must be ensuring that we get a true picture of long-term economic prospects,

with the development of official statistics on national wealth in its broadest sense, including natural and human resources. Saving and investment will need to be encouraged over current consumption. Above all, governments will need to engage citizens in a process of debate about the difficult choices that lie ahead and rebuild a shared commitment to the future of our societies. Creating a sustainable economy—having enough to be happy without cheating the future—won't be easy. But *The Economics of Enough* starts a profoundly important conversation about how we can begin—and the first steps we need to take.

The diversity of author backgrounds, coupled an assortment of provocative insights, makes this book a useful tool for delving into the meat of globalization, providing a succinct but authoritative overview of the underpinnings necessary to appreciate the who, what, where, and when of globalization. American Society of International Law This is a fascinating and insightful set of essays, the relevance of which has only increased with the financial and economic crisis. The ideas and basic positions of the authors range wide, but that is exactly what we

require as we struggle to understand twenty-first century globalisation and what to do about it. I should like to see it in the hands of all academics and policy-makers working on global affairs. Alan Winters, University of Sussex, Chief Economist, UK Department for International Development and Former Head of Research, the World Bank This interdisciplinary volume focuses on the economic and legal challenges confronting globalisation and the evolution of the global system. The Law and Economics of Globalisation discusses the hotly debated topic of globalisation from a wide set of perspectives of law, economics and international political economy. The authors shed new light on the legal, economic and institutional issues raised by globalisation, extending into areas previously considered as national issues. They discuss how the development of the norms, institutions and reach of the global system will be influenced by the domestic and international concerns arising from the increasing integration of countries in the new

century. With contributions from lawyers, economists and other experts in the field, this book will be welcomed by academics, students, researchers, and policymakers who are interested in a comprehensive volume on economic globalisation. It will also appeal to a wider audience, such as executive education courses, as well as business and law schools.

The increase in commercial fisheries production over the last 50 years has been accompanied by an increase in the level of incidental catch and discarding of a number of species. Approximately one quarter of the marine commercial catch destined for human consumption is discarded at sea. This has raised the concern of a number of groups in society, including environmentalists, humanitarians and fishers themselves. In this paper, the economic incentives to discard fish are examined. The effects of different management policies on these incentives are also investigated. The concept of an optimal level of discarding is discussed taking into account the externalities that can be created by discarding. Finally, the effectiveness of various measures to reduce the level of discarding is reviewed. these including technical, administrative and economic measures.
