 The best-selling Fundamentals of Corporate Finance (FCF) has three basic themes that are the central focus of the book: 1) An emphasis on intuition—the authors separate and explain the principles at work on a common sense, intuitive level before launching into any specifics. 2) A unified valuation approach—net present value (NPV) is treated as the basic concept underlying corporate finance. 3) A managerial focus—the authors emphasize the role of the financial manager as decision maker, and they stress the need for managerial input and judgment. The Eleventh Edition continues the tradition of excellence that

has earned Fundamentals of Corporate Finance its status as market leader. McGraw-Hill's adaptive learning component, LearnSmart, provides assignable modules that help students master chapter core concepts and come to class more prepared. In addition, resources within Connect help students solve financial problems and apply what they've learned. Ross Fundamentals' intuitive approach, managerial focus, and strong end-of-chapter content combine with a complete digital solution to help your students achieve higher outcomes in the course.

Fundamentals of Corporate Finance Standard Edition Cram101

Fundamentals of Corporate Finance was designed and developed for a first course in business or corporate finance, for both finance majors and non-majors alike. The text is nearly self-contained in terms of

background or prerequisites, assuming some familiarity with basic algebra and accounting concepts, while still reviewing important accounting principles very early on. The organization of this text has been developed to give instructors the flexibility they need. The best-selling text has three basic themes that are the central focus of the book: 1) An emphasis on intuition: the authors separate and explain the principles at work on a common sense, intuitive level before launching into any specifics. 2) A unified valuation approach: net present value (NPV) is treated as the basic concept underlying corporate finance. 3) A managerial focus: the authors emphasize the role of the financial manager as a decision maker, and they stress the need for managerial input and judgment.

Fundamentals of Corporate Finance 8e combines an applied introduction of concepts with a clear and strong focus on learning outcomes. Based on the principle that students' understanding of corporate finance should be developed in terms of a few integrated and powerful ideas it has 3 basic themes at its core: 1. An emphasis on intuition: It separates and explains key principles on a common-sense intuitive level before launching into specifics. The intuitive organisation of chapters also means that traditionally 'more-difficult' topics arise as a natural extension to the work that has gone before. 2. A unified valuation approach: Net present value (NPV) is treated as the basic concept underlying corporate finance. 3. A managerial focus: It emphasises the role of the financial manager as a decision maker and the need for managerial input and judgement is stressed. Up-to-date examples and cases in all chapters make the 8th edition a comprehensive manual of applied financial management covering financial hot topics and focus areas as well as a historic overview of developments in (and lessons learned from) equity and debt markets. Cases focusing on well-known ANZ and international companies show how recognisable organisations put corporate finance into practice and how real-world events such as the COVID-19 pandemic affect some of their corporate

finance decisions. This new edition is even more flexible than its predecessors offering flexibility of coverage to unit coordinators in designing their courses. Corporate Finance, by Ross, Westerfield, and Jaffe emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return, and use them to explain corporate finance with a balance of theory and application. The Tenth Edition includes many exciting new research findings as well as an enhanced Connect Finance, now with even more student learning resources. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

Fundamentals of Corporate Finance (FCF) is written with one strongly held principle - that corporate finance should be developed and taught in terms of a few integrated, powerful ideas. As such, there are three basic themes that are the central focus of the book: 1. An emphasis on intuition - underlying ideas are discussed in general terms and then by way of examples that illustrate in more concrete terms how a financial manager might proceed in a given situation. 2. A unified valuation approach - net present value (NPV) is treated as the basic concept underlying corporate finance. Every subject covered is firmly rooted in valuation, and care is taken to explain how particular decisions have valuation effects. 3. A managerial focus - the authors emphasize the role of the financial manager as decision maker, and they stress the need for managerial input and judgment.

Fundamentals of Investments was written to: 1. Focus on students as investment managers, giving them information they can act on instead of concentrating on theories and research without the proper context. 2. Offer strong, consistent pedagogy, including a balanced, unified treatment of the main types of financial investments as mirrored in the investment world. 3. Organize topics in a way that

makes them easy to apply--whether to a portfolio simulation or to real life--and support these topics with hands-on activities. The approach of this text reflects two central ideas. First, there is a consistent focus on the student as an individual investor or investments manager. Second, a consistent, unified treatment of the four basic types of

financial instruments--stocks, bonds, options, and futures--focusing on their characteristics and features, their risks and returns, and the markets in which they trade.
