At Corktown Community High School in Toronto, importance is placed on the education of the whole person. An alternative secondary school, it emphasizes the development of self-knowledge and responsiveness to others, creative and critical thought, and connectedness through the self, the school community, and society. Narratives in the Making is based on a research project carried out at the school as part of a large scale national research study, The Exemplary Schools Project. Corktown (a pseudonym) was selected as a participant in this study because of its unusually high rate of student retention, student engagement, achievement, and success. Using narrative accounts of classroom and school practices, profiles of teachers and students, and language that is accessible to both practitioners and academics, Mary Beattie provides insights and explanations of the meaning of success as it is understood by Corktown teachers, students, parents, alumni, and school administrators. She shows how the whole person concept is incorporated into the school environment, and why relationships are at the heart of teaching and learning.

Plato's Ghost is the first book to examine the development of mathematics from 1880 to 1920 as a modernist transformation similar to those in art, literature, and music. Jeremy Gray traces the growth of mathematical modernism from its roots in problem solving and

theory to its interactions with physics, philosophy, theology, psychology, and ideas about real and artificial languages. He shows how mathematics was popularized, and explains how mathematical modernism not only gave expression to the work of mathematicians and the professional image they sought to create for themselves, but how modernism also introduced deeper and ultimately unanswerable questions. Plato's Ghost evokes Yeats's lament that any claim to worldly perfection inevitably is proven wrong by the philosopher's ghost; Gray demonstrates how modernist mathematicians believed they had advanced further than anyone before them, only to make more profound mistakes. He tells for the first time the story of these ambitious and brilliant mathematicians, including Richard Dedekind, Henri Lebesgue, Henri Poincaré, and many others. He describes the lively debates surrounding novel objects, definitions, and proofs in mathematics arising from the use of naïve set theory and the revived axiomatic method—debates that spilled over into contemporary arguments in philosophy and the sciences and drove an upsurge of popular writing on mathematics. And he looks at mathematics after World War I, including the foundational crisis and mathematical Platonism. Plato's Ghost is essential reading for mathematicians and historians, and will appeal to anyone interested in the development of modern mathematics.

 It is an excellent book - highly intelligent, interesting and original. Expressing high philosophy in a readable form without trivialising it is a very difficult task and McAleer manages the task admirably. Plato is, yet again, intensely topical in the chaotic and confused world in which we are now living. Philip Allott, Professor Emeritus of International Public Law at Cambridge University This book is a lucid and accessible companion to Plato's Republic, throwing light upon the text's arguments and main themes, placing them in the wider context of the text's structure. In its illumination of the philosophical ideas underpinning the work, it provides readers with an understanding

and appreciation of the complexity and literary artistry of Plato's Republic. McAleer not only unpacks the key overarching questions of the text - What is justice? And Is a just life happier than an unjust life? - but also highlights some fascinating, overlooked passages which contribute to our understanding of Plato's philosophical thought. Plato's 'Republic': An Introduction offers a rigorous and thought-provoking analysis of the text, helping readers navigate one of the world's most influential works of philosophy and political theory. With its approachable tone and clear presentation, it constitutes a welcome contribution to the field, and will be an indispensable resource for philosophy students and teachers, as well as general readers new to, or returning to, the text.

Drawing upon experiences at state and local level project evaluation, and based on current research in the professional literature, Payne presents a practical, systematic, and flexible approach to educational evaluations. Evaluators at all levels -- state, local and classroom -- will find ideas useful in conducting, managing, and using evaluations. Special user targets identified are state department of education personnel and local school system administrative personnel. The volume can be used by those doing evaluation projects 'in the field', or as a text for graduate courses at an introductory level. The book begins with an overview of the generic evaluation process. Chapter Two is devoted to the criteria for judging the effectiveness of evaluation practice. Chapter Three addresses the all important topic of evaluation goals and objectives. Chapters Four, Five and Six basically are concerned with the approach, framework, or design of an evaluation study. Chapter Four contains a discussion of four major philosophical frameworks or metaphors and the implications of these frameworks for conducting an evaluation. Chapters Five and Six describe predominantly quantitative and qualitative designs, respectively. Design, implementation and operational issues related to instrumentation (Chapter Seven), management and decision making (Chapter Eight), and reporting and utilization of results (Chapter Nine) are next addressed. The final chapter of the book (Chapter Ten) considers the

evaluation of educational products and materials.
