The two-volume Companion to Islamic Art and Architecture bridges the gap between monograph and survey text by providing a new level of access and interpretation to Islamic art. The more than 50 newly commissioned essays revisit canonical topics, and include

original approaches and scholarship on neglected aspects of the field. This two-volume Companion showcases more than 50 specially commissioned essays and an introduction that survey Islamic art and architecture in all its traditional grandeur Essays are organized according to a new chronological-geographical paradigm that remaps the unprecedented expansion of the field and reflects the nuances of major artistic and political developments during the 1400-year span The Companion

represents recent developments in the field, and encourages future horizons by commissioning innovative essays that provide fresh perspectives on canonical subjects, such as early Islamic art, sacred spaces, palaces, urbanism, ornament, arts of the book, and the portable arts while introducing others that have been previously neglected, including unexplored geographies and periods, transregional connectivities, talismans and magic, consumption and networks of portability, museums and collecting, and contemporary art worlds; the essays entail strong comparative and historiographic dimensions The volumes are accompanied by a map, and each subsection is preceded by a brief outline of the main cultural and historical developments during the period in

question The volumes include periods and regions typically excluded from survey books including modern and contemporary art-architecture; China, Indonesia, Sub-Saharan Africa, Sicily, the New World (Americas)

"Megaprojects are springing up throughout both the developed and developing world. Their popularity reflects the drive by political and economic elites to enhance urban competitiveness. Although the idea to construct very large urban complexes can be attributed to globalization, the particular political forces behind them, their urban contexts, and physical outcomes vary from place to place. In this fascinating compendium of case

studies a range of authors from different disciplines delineate the forces shaping and resisting large-scale urban development in a variety of settings and place their empirical findings within the framework of urban theory. This book is essential reading for students of urban politics, planning, sociology, and geography." - Susan Fainstein, Senior Research Fellow, Harvard Graduate School of Design, and author, *The Just City* "The political embrace of city competition has combined with the globalization of banking, real estate, and architecture to make mega-projects seemingly inevitable. What better time, with the world economy slowed, to delve into the motivations for and consequences of the now-ubiquitous and globally-entrenched megaproject. Read

this book to discover how the complexities and promises of this form of urban development have intrigued urban scholars and civic boosters alike." - Robert Beauregard, Professor of Urban Planning and Chair of the Urban Planning Doctoral Committee, Graduate School of Architecture, Planning, and Preservation, Columbia University "Urban Megaprojects: A Worldwide View is an excellent exposition of the so-called "megaprojects paradox": Megaprojects are increasingly used to build and transform cities, but megaprojects have a dismal track record of delivering on the promised benefits. The book's combination of global and local perspectives on megaprojects is highly effective for understanding the issues at hand." - Bent Flyvbjerg, Professor of

'Decentralization and Local Democracy in the World' constitutes a global reference on decentralization by presenting the contemporary situation of local governments in all regions of the world. The report analyzes local authorities in each continent under three main themes: the evolution of territorial structures; responsibilities and power, management and finances; and local democracy. An additional chapter is dedicated to the governance of large metropolises, where rapid growth presents major challenges, in particular

in the fast-developing countries of the South. This report also offers a comparative overview of the different realities concerning the state of decentralization, and how the basic indispensable mechanisms for local democracy do, or do not exist in some countries. Relationships between the state and local authorities are evolving toward innovative forms of cooperation. In this context, the role of local authorities in the development of global policies is increasingly recognized. The first Global Observatory on Local Democracy and Decentralization (GOLD) Report is one of the main products of United Cities and Local Governments (UCLG). The GOLD Report is the first of what will be a triennial publication. UCLG represents and defends the interests of

local governments on the world stage, regardless of the size of the communities they serve. Headquartered in Barcelona, the organization's stated mission is: To be the united voice and world advocate of democratic local self-government, promoting its values, objectives and interests, through cooperation between local governments, and within the wider international community.

This report provides a picture of where we stand and what we have learned so far about maternity and paternity rights across the world. It offers a rich international comparative analysis of law

and practice relating to maternity protection at work in 185 countries and territories, comprising leave, cash benefits, employment protection and non-discrimination, health protection, breastfeeding arrangements at work and childcare. Expanding on previous editions, it is based on an extensive set of new legal and statistical indicators, including coverage in law and in practice of paid maternity leave as well as statutory provision of paternity and parental leave and their evolution over the last 20 years. The report also takes account of the recent economic crisis and austerity measures. It shows how well national laws and practice conform to the ILO Maternity Protection Convention, 2000 (No. 183), its accompanying Recommendation (No.

191) and the Workers with Family Responsibilities Convention, 1981 (No. 156), and offers guidance on policy design and implementation. This report shows that a majority of countries have established legislation to protect and support maternity and paternity at work, even if those provisions do not always meet the ILO standards. One of the persistent challenges is the effective implementation of legislation, to ensure that all workers are able to benefit from these essential labour rights.

This report reviews engineering's importance to human, economic, social and cultural development and in addressing the UN Millennium Development Goals. Engineering tends to be viewed as a national issue, but

engineering knowledge, companies, conferences and journals, all demonstrate that it is as international as science. The report reviews the role of engineering in development, and covers issues including poverty reduction, sustainable development, climate change mitigation and adaptation. It presents the various fields of engineering around the world and is intended to identify issues and challenges facing engineering, promote better understanding of engineering and its role, and highlight ways of making engineering more attractive to young people, especially women.--Publisher's description.

Freedom in the World, the Freedom House flagship survey whose findings have been published annually since 1972, is the standard-setting comparative assessment of global political rights and civil liberties. The survey ratings and narrative reports on 195 countries and fourteen territories are used by policymakers, the media, international corporations, civic activists, and human rights defenders to monitor trends in democracy and track improvements and setbacks in freedom worldwide. The Freedom in the World political rights and civil liberties ratings are determined through a multi-layered process of research and evaluation by a team of regional analysts and eminent scholars. The analysts used a broad range of sources of information,

including foreign and domestic news reports, academic studies, nongovernmental organizations, think tanks, individual professional contacts, and visits to the region, in conducting their research. The methodology of the survey is derived in large measure from the Universal Declaration of Human Rights, and these standards are applied to all countries and territories, irrespective of geographical location, ethnic or religious composition, or level of economic development.

All phases of road developmentâ€"from construction and use by vehicles to maintenanceâ€"affect physical and chemical soil conditions, water flow, and air and water quality, as well as plants

and animals. Roads and traffic can alter wildlife habitat, cause vehicle-related mortality, impede animal migration, and disperse nonnative pest species of plants and animals. Integrating environmental considerations into all phases of transportation is an important, evolving process. The increasing awareness of environmental issues has made road development more complex and controversial. Over the past two decades, the Federal Highway Administration and state transportation agencies have increasingly recognized the importance of the effects of transportation on the natural environment. This report provides guidance on ways to reconcile the different goals of road development and environmental conservation. It identifies

the ecological effects of roads that can be evaluated in the planning, design, construction, and maintenance of roads and offers several recommendations to help better understand and manage ecological impacts of paved roads.

Shortlisted for the Financial Times and McKinsey Best Book of the Year Award in 2011 "A masterpiece." —Steven D. Levitt, coauthor of Freakonomics "Bursting with insights." —The New York Times Book Review A pioneering urban

economist presents a myth-shattering look at the majesty and greatness of cities America is an urban nation, yet cities get a bad rap: they're dirty, poor, unhealthy, environmentally unfriendly . . . or are they? In this revelatory book, Edward Glaeser, a leading urban economist, declares that cities are actually the healthiest, greenest, and richest (in both cultural and economic terms) places to live. He travels through history and around the globe to reveal the hidden workings of cities and how they bring out the best in humankind. Using intrepid reportage, keen analysis, and cogent argument, Glaeser makes an urgent, eloquent case for the city's importance and splendor, offering inspiring proof that the city is humanity's greatest creation and our best hope for

the future.

One-quarter of the world's school-age children live in East Asia and Pacific. During the past 50 years, some economies in the region have successfully transformed themselves by investing in the continuous upgrading of the knowledge, skills, and abilities of their workforce. Through policy foresight, they have produced graduates with new levels of knowledge and skills almost as fast as industries have increased their demand for skilled workers. Yet the success of these high-performing systems has not been replicated throughout the region. Tens of millions

of students are in school but not learning, and as many as 60 percent of students remain in school systems that are struggling to escape from the global learning crisis or in systems where performance is likely poor. Many students in these systems fail to reach basic levels of proficiency in key subjects and are greatly disadvantaged because of it. Growing Smarter: Learning and Equitable Development in East Asia and Pacific focuses on the experiences of economies in the region that have been able to expand schooling and learning and showcases those that have managed to pursue successful education reforms at scale. By examining these experiences, the report provides both diagnoses and detailed recommendations for improvement not

only for education systems within East Asia and Pacific but also for countries across the globe. In East Asia and Pacific, the impressive record of success in education in some low- and middle-income countries is proof of concept that schooling in resource-constrained contexts can lead to learning for all. This report identifies the policies and practices necessary to ensure that students learn and suggests how countries can improve learning outcomes.

Education is a source of national pride in Lebanon. When the general public was asked how the education system was performing, 76 percent of respondents had a positive opinion; and these satisfaction rates have been consistently

high over the years. However, perception of education quality does not reflect the reality of the sector; and learning outcomes, which are the determining metrics of success in education, have been lower than the international average, with a declining trend since 2007. This volume seeks to uncover why the education system in Lebanon is not reaching its full potential. It uses a political economy approach to study the drivers and factors that guide education operations to produce and utilize education outcomes. This includes the study of context, stakeholders, and processes that shape education policies, institutions, and activities. It also aims to identify enablers of and constraints on policy change and implementation, as well as the achievement of results. In

this context, the analysis encompasses how education policies are developed; how education consumables—such as curricula, textbooks, and learning materials—are produced, distributed, and used by learners; how education services are delivered and monitored; and how achieved results are measured. It includes the identification of the most influential actors in the education arena, as well as their vested interests. It also examines unfavorable frameworks for action that are likely to block the adoption of reforms and delay or derail their implementation. The system-level analysis presented in this volume used a mixed-method approach. Qualitative and quantitative analyses were conducted based on a review and analysis of more than 1,900 research papers, articles, and

books; laws and policies; expenditures; trends; and enrollment and outcome indicators. Primary methods of inquiry were also used and included interviews, focus group discussions, and a household-based perception survey.

Mercenaries are more powerful than

experts realize, a grave oversight. Those who assume they are cheap imitations of national armed forces invite disaster because for-profit warriors are a wholly different genus and species of fighter. Private military companies such as the Wagner Group are more like heavily armed multinational corporations than

the Marine Corps. Their employees are recruited from different countries, and profitability is everything. Patriotism is unimportant, and sometimes a liability. Unsurprisingly, mercenaries do not fight conventionally, and traditional war strategies used against them may backfire.
