KAISER MIGUEL

Hierarchical Belief K-Nearest Neighbors for Human Activity Recognition DIANE Publishing
 Clinical Dosage Calculations is a locally written, full-colour text covering the important aspects of dosage calculations that students require to perform this essential part of clinical practice. An applied skills-focused text, Brotto uses real-life cases, worked examples and real medication charts and labels to engage students. Using a scaffolded approach to learning, the text starts with fundamental maths and familiarises students with medication charts and labels, then moves on to specialist area chapters, allowing learners to deepen their skills in a clinical context. Students engage in the activities of each chapter as an introduction to the concept before moving onto the final chapter where they can test their overall knowledge.
Quantitative Approaches to Management Arihant Publications India limited

In Wearable Body Sensor Networks (WBSNs), the multi-sensor fusion strategy is widely utilized in Human Activity Recognition (HAR) problems. As the classical decision-level fusion strategy, the Belief Functions (BF) theory often uses a flat structure to fuse the outputs of basic classifiers. However, it is very challenge and difficult to accurately identify confusing activities such as walking upstairs and downstairs based on such flat structure. In this paper, a novel Hierarchical Belief K-Nearest Neighbors approach (Hie-BKNN) for activity recognition is proposed. First, the data-driven hierarchical tree is constructed by using the spectral clustering strategy. Then, inspired by BF theory and classical K-nearest neighbors, the pair-aware belief masses are calculated for each node and the belief hierarchical tree can be generated. Afterwards, we adopt a novel hierarchical fusion strategy to fuse all involved belief hierarchical trees. Finally, by selecting the probability maximization path on the entire tree, the label of a test sample can be effectively predicted. The experimental results show that our proposed Hie-BKNN approach can precisely recognize daily activities of two different UCI public data sets, i.e.,

Smartphone and WISDM datasets.

Construction Management Goyal Brothers Prakashan

Scheduling problems have been investigated since the late 1970s. Two types of applications have mainly motivated research in this area: project planning and machine scheduling. While in machine scheduling a large number of specific scheduling situations depending on the machine environment and the job characteristics have been considered, the early work in project planning investigated scheduling situations with precedence constraints between activities assuming that sufficient resources are available to perform the activities. More recently, in project scheduling scarce resources have been taken into account leading to so-called resource-constrained project scheduling problems. On the other hand, also in machine scheduling more general and complex problems have been investigated. Due to these developments today both areas are much closer to each other. Furthermore, applications like timetabling, rostering or industrial scheduling are connected to both areas. This book deals with such complex scheduling problems and methods to solve them. It consists of three parts: The first part (Chapters 1 and 2) contains a description of basic scheduling models with applications and an introduction into discrete optimization (covering complexity, shortest path algorithms, linear programming, network flow algorithms and general optimization methods). In the second part (Chapter 3) resource-constrained project scheduling problems are considered. Especially, methods like constraint propagation, branch-and-bound algorithms and heuristic procedures are described. Furthermore, lower bounds and general objective functions are discussed.

As the use of project management to accomplish organisational goals continues to grow, skills related to understanding human behavior, evaluating organisational issues, and using quantitative methods are all necessary for successful project management. Meredith and Mantel have drawn from experiences in the workplace to develop a text that teaches the student how to build skills necessary for selecting, initiating, operating, and controlling all types of projects.

Handbook of High Frequency Trading Bloomsbury Publishing USA

The management of construction projects is a wide ranging and challenging discipline in an increasingly international industry, facing continual challenges and demands for improvements in safety, in quality and cost control, and in the avoidance of contractual disputes. Construction Management grew out of a Leonardo da Vinci project to develop a series of Common Learning Outcomes for European Managers in Construction. Financed by the European Union, the project aimed to develop a library of basic materials for developing construction management skills for use in a pan-European context. Focused exclusively on the management of the construction phase of a building project from the contractor's point of view, Construction Management covers the complete range of topics of which mastery is required by the construction management professional for the effective delivery of new construction projects. With the continued internationalisation of the construction industry, Construction Management will be required reading for undergraduate and postgraduate students across Europe.

This comprehensive examination of high frequency trading looks beyond mathematical models, which are the subject of most HFT books, to the mechanics of the marketplace. In 25 chapters, researchers probe the intricate nature of high frequency market

dynamics, market structure, back-office processes, and regulation. They look deeply into computing infrastructure, describing data sources, formats, and required processing rates as well as software architecture and current technologies. They also create contexts, explaining the historical rise of automated trading systems, corresponding technological advances in hardware and software, and the evolution of the trading landscape. Developed for students and professionals who want more than discussions on the econometrics of the modelling process, *The Handbook of High Frequency Trading* explains the entirety of this controversial trading strategy. Answers all questions about high frequency trading without being limited to mathematical modelling. Illuminates market dynamics, processes, and regulations. Explains how high frequency trading evolved and predicts its future developments.

General Technical Report PSW. Routledge

This book constitutes selected and revised papers of the First International Conference on Artificial Intelligence and Sustainable Computing for Smart City, AIS2C2 2021, held in Greater Noida, India, in March 2021. Due to the COVID-19 pandemic the conference was held online. The 17 full papers and 3 short papers included were thoroughly reviewed and selected from 204 submissions. They are organized in the following topical sections: sentimental and emotions analysis for smart cities; smart specialization strategies for smart cities; security in smart cities; advances applications for future smart cities; healthcare in smart cities; machine learning applications in smart cities.

New and updated resources tailored to the 2015 Advancing Physics specification, written by curriculum experts and developed in partnership with OCR. With new accessible format and features throughout, these resources retain the ethos of Advancing Physics while providing full support for the new linear qualification. This Student Book covers the second year of content required for the new Advancing Physics A Level qualification. It develops true subject knowledge while also developing essential exam skills.

Managerial Accounting Academic Press

The field of operations management is increasingly recognized as being crucial to the success of a company. The premise of this book is that learning specific analytical techniques can provide a deeper understanding of the problems in operations management than merely reading about these problems. The book is concise while still providing a broad discussion of the issues and details to learn these valuable tools. Each problem area is introduced with an overview of the issues that must be addressed and the array of tools available to analyze them. Next, detailed examples are presented. Through these examples, the ramifications of the various approaches and the tradeoffs that must be considered when choosing one approach over another are explored. The book is a valuable resource for researchers, students, and business practitioners.

Aviation Project Management Infinite Study

Management and administrative processes within the construction industry have been undergoing major changes in the last several decades. These changes have involved significant adjustments in management science and management techniques, brought about by the need for contemporary valid information with which to manage the construction process. In short, management in the construction industry is changing significantly; change will continue at an accelerated pace at least

through the next decade. The responses required of construction industry management are now resulting in a movement away from an entrepreneurial management style to professional management techniques and procedures. THE COMPELLING ECONOMIC ISSUES The issues forcing these changes are economic. The rising costs of construction and of money are forcing the buyers of construction services to be more demanding. Their demands are for more construction economies, more production, and more productivity than at any time in the past. Nowhere has this been more evident than in the Business Roundtable on construction and in the response of the construction industry to it. To be successfully responsive, management in the construction industry will be required to use the best project management methods available for cost control, schedule control, and for financial and accounting controls. But responsive professional management can survive and will flourish within this more demanding economic environment.

A Textbook of Tourism [Subject Code 806] for Class 11 is designed to facilitate the job role of Travel Blogger, Airline Staff, Hotelier, Tourism Manager, Travel Consultant, Front Office Executive, Travel Executive, Tourist Guide, Transport Agent and Tour Operator. This book has been developed as per the latest syllabus and examination pattern prescribed by the CBSE. The language in the book is deliberately kept reader-friendly, allowing easy accessibility and grasp of knowledge. This book on tourism provides detailed information on tourism concepts. It also emphasises the connections between tourism and India's and the world's history and geography. The book also highlights the role of hospitality, accommodations, tourism activities and ancillary services in tourism. A discussion on different types of tourism organisations in the world has also been presented, emphasising their roles in promoting and developing the travel and tourism industry. Nowadays, the hospitality and tourism industries are among the world's largest. It began with travel during human civilisations when humans began to live in an organised society. In modern and post-modern times, tourism has evolved manifolds, and its demand has also increased. Travel and tourism promote happiness for various reasons, from leisure and pleasure to psychological and physical well-being and benefits.

Considering the growth and development of travel and tourism, the need for professionals to cater to the needs of this dynamic industry was felt. Tourism professionals require an in-depth knowledge gained through multi-disciplinary approaches such as history, geography, culture, anthropology, psychology and tourism business, and thus, the need for competency-based vocational education was realised. In this regard, CBSE introduced travel and tourism courses as part of the tourism and hospitality stream. Each chapter has been divided into the following parts: (a) Introduction: It introduces you to the chapter's

topic and learning objectives. (b) Relevant Knowledge: This part of the unit provides you with relevant information on the topics covered. The knowledge developed through this part will enable the students to perform certain activities listed at the end of each topic. (c) Assignment: The various questions included in this part of the chapter will help the students to check their understanding of the topics learnt. Sincere attempts have been made to keep the language of the book simple. The concepts have also been explained through pictorial illustrations wherever necessary. This will allow the students to have a swift reading of the book, making the content of the book easy to understand. We also hope that this book will boost the students' morale and enormously benefit the teachers. Constructive suggestions for the improvement of the book are most welcome. The authors would be glad to read the feedback and implement it in upcoming books. -Authors

Time Matters is a practical resource to help children and young people learn about time. Time is usually taught through the Primary school years, teachers working in Secondary schools have been very surprised to discover these gaps in students' understanding of calendar time, having assumed that these skills have been acquired at an earlier age. This practical resource: - Helps to teach the essential skills needed to carry out a range of time-related concepts e.g. telling the time on a clock. - Can be used by older children, young people and adults who have learned some of the key concepts but need more in-depth knowledge, further practice, or opportunities to practise skills in a functional way. - Includes case studies and the rationale for working on different aspects of time, teaching worksheets and also practical strategies and activities to develop life skills which affect us all e.g. making and keeping appointments, travelling, using calendars and diaries etc. - Can be used in a range of settings including: Education, Health and Social Care.

Get the most comprehensive PMP® Exam study package on the market! Prepare for the demanding PMP certification exam with this Deluxe Edition of our PMP: Project Management Professional Exam Study Guide, Fourth Edition. Featuring a bonus workbook with over 200 extra pages of exercises, this edition also includes six practice exams, over two hours of audio on CD to help you review, additional coverage for the CAPM® (Certified Associate in Project Management) exam, and much more. Full coverage of all exam objectives in a systematic approach, so you can be confident you're getting the instruction you need for the exam Bonus workbook section with over 200 pages of exercises to help you master essential charting and diagramming skills Practical

hands-on exercises to reinforce critical skills Real-world scenarios that put what you've learned in the context of actual job roles Challenging review questions in each chapter to prepare you for exam day Exam Essentials, a key feature in each chapter that identifies critical areas you must become proficient in before taking the exam A handy tear card that maps every official exam objective to the corresponding chapter in the book, so you can track your exam prep objective by objective On the accompanying CD you'll find: Sybex test engine: Test your knowledge with advanced testing software. Includes all chapter review questions and bonus exams. Electronic flashcards: Reinforce your understanding with flashcards that can run on

your PC, Pocket PC, or Palm handheld. Audio instruction: Fine-tune your project management skills with more than two hours of audio instruction from author Kim Heldman. Searchable and printable PDF of the entire book. Now you can study anywhere, any time, and approach the exam with confidence.
