SANCHEZ BURGESS

Everyday Conceptions of Emotion

Routledge

An Anthropology of Money: A Critical Introduction shows how our present monetary system was imposed by elites and how they benefit from it. The book poses the question: how, by looking at different forms of money, can we appreciate that they have different effects? The authors demonstrate how modern money requires perpetual growth, an increase in inequality, environmental devastation, increasing commoditization, and, consequently, the perpetual consumption of ever more stuff. These are not intrinsic features of money, but, rather, of debt-money. This text shows

that, through studying money in other cultures, we can have money that better serves the broader goals of society.

A Critical Introduction Routledge

The advent of social media offers anthropologists exciting opportunities to extend their research to communities in fresh ways. At the same time, these technological developments open up anthropological fieldwork to different hazards. Networked Anthropology explores the increasing appropriation of diverse media platforms and social media into anthropological research and teaching. The chapters consider the possibilities and challenges of multimedia, how network ecologies work, the ethical dilemmas involved, and how to use multimedia methodologies. The book combines theoretical insights with case studies, methodological sketches and pedagogical notes. Drawing on recent ethnographic

work, the authors provide practical guidance in creative ways of doing networked anthropology. They point to the future of ethnography, both inside and outside the classroom, and consider ways in which networked anthropology might develop.

New Directions in Psychological Anthropology Routledge

This introductory text explains how anthropology is integral to the study of tourism dynamics. Starting with an overview of the development of anthropology as a social science, the author uses a wealth of international examples, including the UK, USA and Australia, to bring practical relevance to complex theories. With its lucid writing style, summaries, sample questions and suggestions for further reading, this book will be an invaluable teaching resource in this area.

An Introduction to the Psychology, Anthropology and Linguistics of Emotion Cambridge University Press

Encompasses topics including aging (geropsychology), assessment, clinical, cognitive, community, counseling, educational, environmental, family, industrial/organizational, health, school, sports, and transportation psychology. Each entry provides a clear definition, a brief review of the theoretical basis, and emphasizes major areas of application. An Alternative Introduction Routledge Trillium Listed! The Human Way meets the curriculum for the Ontario course "Introduction to Anthropology, Psychology, and Sociology (HSP3M)." French version *Les Visages de l'Humanite* available. Please contact Cheneliere Education (www.cheneliere.ca) for details.

The Psychology and Anthropology of Fieldwork Experience McGraw-Hill Ryerson This book provides an up-to-date introduction to the important and growing field of urban anthropology. This is an increasingly critical area of study, as more than half of the world's population now lives in cities and anthropological research is increasingly done in an urban context. Exploring contemporary anthropological approaches to the urban, the authors consider: How can we define urban anthropology? What are the main themes of twenty-first century urban anthropological research? What are the possible future directions in the field? The chapters cover topics such as urban mobilities, place-making and public space, production and consumption, politics and governance. These are illustrated by lively case studies drawn from a diverse range of urban settings in the global North and South. Accessible yet theoretically incisive, *Introducing Urban Anthropology* will be a valuable resource for anthropology students as well as of interest to those working in urban studies and related disciplines such as sociology and geography.

Course Profile Routledge

This book investigates how anthropologists can make use of the emotions fieldwork generates within them to deepen their understanding of the communities they study.

The Development of Cognitive Anthropology Routledge

Foucault's previously unpublished doctoral dissertation on Kant offers the definitive statement of his relationship to Kant and to the critical tradition of philosophy. This introduction and commentary to Kant's least discussed work, *Anthropology from a Pragmatic Point of View*, is the dissertation that Michel Foucault presented in 1961 as

his doctoral thesis. It has remained unpublished, in any language, until now. In his exegesis and critical interpretation of Kant's *Anthropology*, Foucault raises the question of the relation between psychology and anthropology, and how they are affected by time. Though a Kantian "critique of the anthropological slumber," Foucault warns against the dangers of treating psychology as a new metaphysics, explores the possibilities of studying man empirically, and reflects on the nature of time, art and technique, self-perception, and language. Extending Kant's suggestion that any empirical knowledge of man is inextricably tied up with language, Foucault asserts that man is a world citizen insofar as he speaks. For both Kant and Foucault, anthropology concerns not the human animal or self-consciousness but, rather, involves the questioning of the limits of human knowledge and concrete existence. This long-unknown text is a valuable contribution not only to a scholarly appreciation of Kant's work but as the first outline of what would later become Foucault's own frame of reference within the history of philosophy. It is thus a definitive statement of Foucault's relation to Kant as well as Foucault's relation to the critical tradition of philosophy. By going to the heart of the debate on structuralist anthropology and the status of the human sciences in relation to finitude, Foucault also creates something of a prologue to his foundational *The Order of Things*. Michel Foucault (1926–84) is widely considered to be one of the most important academic voices of the twentieth century and has proven influential across disciplines.

Images of Society Routledge

This resource saves time and effort while providing full teaching support.

Introduction to Anthropology, Psychology, and Sociology Cambridge Scholars Publishing

Both a vital theoretical work and a fine illustration of the principles and practice of sensory ethnography, this much anticipated translation is destined to figure as a major catalyst in the expanding field of sensory studies. Drawing on his own fieldwork in Brazil and Japan and a wide range of philosophical, literary and cinematic sources, the author outlines his vision for a 'modal anthropology'. François Laplantine challenges the primacy accorded to 'sign' and 'structure' in conventional social science research, and redirects attention to the tonalities and rhythmic intensities of different ways of living. Arguing that meaning, sensation and sociality cannot be considered

separately, he calls for a 'politics of the sensible' and a complete reorientation of our habitual ways of understanding reality. The book also features an introduction to the sensory and social thought of François Laplantine by the editor of the Sensory Studies series, David Howes.

Man, His First Two Million Years Harcourt School

An introduction to the central concerns of social anthropology, presenting an alternative to standard texts. More concerned with the life-worlds of underdevelopment than the primitive or the exotic, it draws on material which evokes current problems of policy and administration in the Third World. The author raises questions of vital importance to contemporary investigation and analysis, and pointers to the future for anthropology.

Encyclopedia of Applied Psychology Don Mills, Ont. : Oxford

This book originates from a lecture series given on Psychology and Anthropology at Goldsmiths College London in 2018. It offers an introduction to psychological anthropology, and will be useful both for undergraduates and postgraduates. While providing a critical overview of topics commonly included in psychological anthropological texts, such as psychoanalysis, culture and personality, child development, personality, emotion, the self, memory and cognition, this book also offers a chapter on Darwin, sociobiology and evolutionary psychology to emphasise that behaviour is not infinitely malleable, but, rather, culture impacts existent biological and psychological structures. As shown here, while culture impacts psychological processes, these processes are constrained by genetic, biological and evolutionary factors.

The Life of the Senses Praeger

The contributors to this state-of-the-art collection are prominent figures in psychological anthropology, and they write about recent developments in this field. Psychological anthropology's present scope includes the psychology of cognition and affect, to which it has made substantial contributions.

Culture and Psyche [Whitby, Ont.] : McGraw-Hill Ryerson

This Companion provides the first definitive overview of psychocultural anthropology: a subject that focuses on cultural, psychological, and social interrelations across cultures. Brings together original essays by leading scholars in the field Offers an in-depth exploration of the concepts and topics that

have emerged through contemporary ethnographic work and the processes of global change. Key issues range from studies of consciousness and time, emotion, cognition, dreaming, and memory, to the lingering effects of racism and ethnocentrism, violence, identity and subjectivity.

A Primer for Ethnographers Routledge
Psychological Anthropology: A Reader in Self in Culture presents a selection of readings from recent and classical literature with a rich diversity of insights into the individual and society. Presents the latest psychological research from a variety of global cultures. Sheds new light on historical continuities in psychological anthropology. Explores the cultural relativity of emotional experience and moral concepts among diverse peoples, the Freudian influence and recent psychoanalytic trends in anthropology. Addresses childhood and the acquisition of culture, an ethnographic focus on the self as portrayed in ritual and healing, and how psychological anthropology illuminates social change.

Images of Society Psychology Press
 This book is an introduction to library research in anthropology written primarily for the undergraduate student about to begin a research project. It contains a summary description of the type of resource being discussed and its potential use in a research project.

An Introduction to Anthropology, Psychology and Sociology Prentice Hall
 This book offers a concise and accessible overview of cultural anthropology for those coming to the subject for the first time. It introduces key areas of the discipline and touches on its historical developments and applied aspects. As well as traditional topics such as social organization, politics, and economics, the book engages with important

contemporary issues including race, gender, sexuality, and colonialism. In a beginner-friendly format, this book is ideal for students of anthropology, as well as for the interested reader as an introduction to the subject.

An Introduction to Critical Theories of the Gift Taylor & Francis

Anthropology and psychotherapy have a long and important historical relationship, and in this fascinating collection practitioners with experience in both fields explore how the concept of 'culture' is deployed to guide and frame contemporary therapeutic theory, training and practice. This task is particularly important as the global spread of psychotherapy, as both an outgrowth of and a potential point of critique to globalised hyper-capitalism, requires us to think differently about how to conceptualise cultural difference in psychotherapy. *Psychotherapy, Anthropology and the Work of Culture* provides a valuable resource for psychotherapeutic professionals working in a world in which cultural difference appears in fluid and transient moments. It will also provide essential reading for students and researchers working across the fields of psychotherapy and anthropology.

Introducing Urban Anthropology John Wiley & Sons

This book provides a comprehensive introduction to psychological anthropology, covering both the early history and contemporary state of the field. Eller discusses the major themes, theories, figures and publications, and provides a detailed survey of the essential and enduring relationship between anthropology and psychology. The volume charts the development, celebrates the accomplishments, critiques the inadequacies, and considers the future of a field that has made great contributions

to the overall discipline of anthropology. The chapters feature rich ethnographic examples and boxes for more in-depth discussion as well as summaries and questions to support teaching and learning. This is essential reading for all students new to the study of psychological anthropology.

An Introduction to Anthropology, Psychology and Sociology. Syllabus Routledge

Research Films in Biology, Anthropology, Psychology, and Medicine is an encyclopedic account of the many uses of research films in the fields of biology, anthropology, psychology, and medicine. The book looks at cinemicrography, the making of human record films, and quantitative methods inherent in all scientific cinematography such as medical and X-ray cinematography. This volume is organized into three sections encompassing 10 chapters and begins by considering the definition of research film and scientific cinematography, touching on topics such as the advantages and limitations of scientific cinematography and methods used to preserve and store the research film. The next chapters discuss the fundamental principles of cinemicrography as a research tool; the value of cinematography in biological investigations, including the study of animal behavior; and the theoretical and practical considerations in the use of cinematography in the human sciences, such as anthropology, psychology, and psychiatry. The book also methodically introduces the reader to medical applications of cinematography and the techniques of X-ray cinematography, and then concludes with relevant examples of the use of cinematography in medical research and diagnosis. This book is a valuable resource for scientists and cinematographers.
