General Practice Cases at a Glance is a workbook of clinical scenarios, ideal for those working in general practice, on their GP rotations, or looking to improve their history-taking, diagnostic and management planning skills. Written by practising teaching GPs, it provides an accessible overview of the richness and complexity of general practice. With 50 engaging consultations, covering all age ranges and a broad spread of clinical areas, each symptom-based chapter begins with the clinical presentation of a patient, before going on to uncover the full history and

examination. As you work through each true-to-life case, there are red flag symptoms, useful charts and tables, and further resources to deepen your knowledge. General Practice Cases at a Glance: Is suitable for clinical students, Foundation doctors, and those preparing for the MRCGP's CSA Includes 50 case scenarios from across the medical spectrum, from mental health and paediatrics to musculoskeletal and ENT medicine Is comprehensively illustrated Features current clinical guidelines, and charts and tables to accompany each case Is the companion volume to General Practice at a Glance, ISBN 978-0-470-65551-1, (Awarded First Prize in the Primary health care category at the 2013 BMA Medical Book Awards) but is also a stand-alone resource

Clinical Pharmacy and Therapeutics E-Book John Wiley & Sons
"Nursing the Acutely ill Adult is a comprehensive text ... Each

chapter draws on the clinical and academic expertise of the author and follows a structured approach that explores the case problems, altered physiology and nursing interventions and care. It is an ideal reference resource for nurses who wish to reflect and explore the evidence base underpinning the complexities of nursing acutely ill adults." Alison Eddleston, Senior Lecturer Acute, Operative and Critical Care, School of Health, University of Central Lancashire, UK "This informative case-based book encourages the reader to critically consider the assessment and care needed by acutely ill adult patients with a variety of underlying conditions. Nursing and other healthcare students ... should find that the book helps with the development of an integrated mindset and evidence-based decision making." Janice Christie, Senior Lecturer in Public Health and Primary Care, City University London, UK "The book will enable practitioners to approach the assessment of patients with a range of acute conditions in a structured manner. The case scenarios are very realistic and there are good explanations of underlying pathophysiology. There is also a well structured explanation of investigations and priority interventions ... This book will enable the development of expertise in assessment and prioritising of care in a range of settings." Laurence Leonard, Senior Lecturer, Kingston University and St George's, University of London, UK The complexity of caring for patients who become acutely ill or have deteriorated can be a daunting challenge for nurses. Part of a case book series, this accessible book contains 17 in-depth case studies relating to care of the acutely ill adult. The cases combine pathophysiology, pharmacology and nursing care in realistic clinical settings, providing an engaging resource for nursing

students taking acute care modules. This handy book: Follows a step-by-step question and answer format Facilitates the application of theory to practice through the use of clinical case studies Considers the most common acute illness scenarios that are frequently encountered by practitioners Integrates knowledge of pathological processes, applied pharmacology and related nursing implications to acute illness Nursing the Acutely Ill Adult: Case Book offers a unique way of relating theory to practice, making it key reading for undergraduate nursing students. It will also be beneficial to students in areas such as intensive care as well as nurse educators looking for a way to bridge the gap between the classroom and clinical practice. Contributors: Patrick Gallagher, Niall McKenna, Billie Joan Rice.

Radical changes in our understanding of health and healthcare are reshaping twenty-first-century personhood. In the last few years, there has been a great influx of public policy and biometric technologies targeted at engaging individuals in their own health, increasing personal responsibility, and encouraging people to "self-manage" their own care. *One Blue Child* examines the emergence of self-management as a global policy standard, focusing on how healthcare is reshaping our relationships with ourselves and our bodies, our families and our doctors, companies, and the government. Comparing responses to childhood asthma in New Zealand and the Czech Republic, Susanna Trnka traces how ideas about self-management, as well as policies inculcating self-reliance and self-responsibility more broadly, are assumed, reshaped, and ignored altogether by medical professionals, asthma sufferers and parents,

environmental activists, and policymakers. By studying nations that share a commitment to the ideals of neoliberalism but approach children's health according to very different cultural, political, and economic priorities, Trnka illuminates how responsibility is reformulated with sometimes surprising results.

A concise, practical guide to the diagnosis, treatment and management of common allergy and asthma conditions in primary care. Allergy and asthma represent some of the most common chronic conditions presenting in primary care. Furthermore, up to 20% of patients with allergies struggle on a daily basis with the fear of anaphylactic shock or an asthma attack. This book guides readers through the basic immunology and pathophysiology and then provides details on all aspects of the clinical assessment of allergic patients: History-taking Clinical examination Investigations and imaging A broad range of allergies is then presented with succinct clinical advice detailing the causes, diagnosis and treatment of each allergy in turn.

Asthma is covered separately using the latest asthma guidelines to describe the risk factors, stratification, and accurate diagnosis. This is followed by a concise presentation of asthma management and monitoring in primary care. The book concludes with the pressing issue of childhood allergy, and highlights the investigations, assessment and treatments specific to allergy and asthma in children. This is the ideal clinical text for GPs, medical students and nurse practitioners looking to manage common allergies and asthma, and for those looking for decision-making support when considering onward referral.

Highly Commended in Medicine in the 2017 BMA Medical Book Awards Essential Practical Prescribing is an important new textbook with a clinical, ward-based focus. It is specifically designed to help new foundation doctors working on the hospital wards and in the community, as well as medical students preparing for the Prescribing Safety Assessment. Using an accessible format, Essential Practical Prescribing demonstrates how to manage common medical conditions, and explains the logic behind each decision. It also emphasises common pitfalls leading to drug errors, and highlights drugs that could cause harm in certain situations. Organised by hospital department, it outlines the correct management of conditions, as well as highlighting the typical trials of a junior doctor. Essential Practical Prescribing: Contains a range of learning methods within each chapter including: key topics, learning objectives, case studies, DRUGS checklists, "Top-Tips", advice on guidelines and evidence, and key learning points Uses patient histories to set the scene and enhance the clinical emphasis Offers examples of correctly completed drug charts throughout, which are also available online Is an ideal companion for Prescribing Safety Assessment (PSA) preparation Includes a companion website at www.wileyessential.com/prescribing featuring MCQs and downloadable DRUGS checklists and drug charts

Crash Course Paediatrics John Wiley & Sons

Like the original Ward-based Critical Care, this second edition aims to guide practitioners in the initial management of critically ill adult patients within the ward setting. It should be of value to a

wide range of healthcare professionals, including junior doctors, nurses, physiotherapists and students. It will also be relevant to practitioners who are moving into any setting that cares for acutely ill patients. This volume has been slightly reorganised since the first edition to ensure that practical aspects are incorporated within the relevant sections. The book is still structured around the ABCDE approach to assessing and managing patients, as this is promoted in critical care and resuscitation care training. The focus on practical examples and 'hot tips' to aid memory of key points continues. All the chapters have been updated with the most recent guidance, as available at the time of writing. This has meant that some chapters have required major revisions, while others have remained relatively unchanged. Some new chapters have been included, such as the ones on anaphylactic shock, patient safety, dealing with pregnant women in the ward setting, and massive blood transfusion. In addition, each section now starts with a chapter giving an overview of the A-E approach in order to provide more detail about assessing and managing those aspects of patient care. This informative book contains many useful features such as clinical scenarios, hot tips and practical skills, and the text is richly illustrated and cross-referenced throughout.

This updated volume on clinical forensic medicine covers the topics required for forensic healthcare professionals working in general forensic medicine and sexual offence medicine. All chapters have been reviewed and revised to reflect how the

provision of forensic medical services has changed since the previous edition with multidisciplinary teams working in the custodial environment, comprising doctors, nurses, and paramedics and those practitioners providing sexual offence examinations. New and updated topics include: the increasing importance of photo documentation by health care professionals; updated information on strangulation, torture; a review of bite mark injuries; the explosion of Novel Psychoactive Substances worldwide; the changing patterns of deaths in custody and deaths following police contact; and the introduction in various jurisdictions of legal limits for drugs based on zero tolerance or a risk based approach. Written by a team of experts, the new edition of this book is a valuable resource for forensic healthcare professionals including doctors, nurses and paramedics working in general forensic medicine and sexual offence medicine, as well as emergency physicians, pediatricians and gynaecologists.

This book helps to recognize the rights of refugees and provides a framework to identify and approach health needs, from basic elements like service mapping and initial interventions to more complex elements of ongoing healthcare and support and broader topics such as migration public health, migration policy and health systems. Beyond biomedical frameworks, it draws on socio-ecological models to inform assessments and integrated models of care to improve health and health equity. Set out in three comprehensive sections: public health theory (Part 1), applied public health (Part 2), and clinical approaches (Part 3), this book draws on multiple disciplines and insights from

humanitarians, academics, policy experts, and clinicians from diverse contexts, with expertise in forced migration, to create an accessible reference tool to inform healthcare professionals' interactions with forcibly displaced individuals and populations in all contexts for both high and low resource countries. Apart from providing information across the spectrum of health issues, clinical specialties and global contexts, it discusses associated areas, including human rights and law, public health, medical anthropology and cultural awareness. Key Features: Bridges the gap between existing academic literature on refugee health and guidelines for health management in humanitarian emergencies Helps to develop an integrated approach to healthcare provision, allowing healthcare professionals and humanitarians to adapt their specialist knowledge for use in forced migration contexts and with refugees. Recognizes the complex and interconnected needs in displacement scenarios and identifies holistic and systems-based approaches. Covers public health theory, applied public health and clinical aspects of forced migration.

As the series title implies each Clinician's Desk Reference is a practical resource and a daily aid for physicians in the hospital setting and in primary care. Asthma is one of the most important chronic disorders in the developed world. Evidence from around the world shows the prevalence of asthma has increased considerably since 1975, and now affects around 7.2% of the world population (about 100 million individuals). In the UK asthma is now the most common chronic disease affecting all age groups with approximately 11% of the population being diagnosed as having asthma at some time in their lives.

Understanding of the basic mechanisms involved in the pathogenesis of asthma has improved dramatically over the past 20 years. Along with this increase in basic scientific knowledge, randomized clinical trials have produced evidence to guide clinicians in how to manage patients with asthma. The book covers epidemiology, diagnosis and management, and takes a look at future developments. The authors highlight the under diagnosis of occupational asthma and emphasize the importance of effective patient education, particularly asthma action plans. There are ten clinical cases dealing with common diagnostic and management problems, frequently asked questions and appendices containing resources for patients and clinicians including useful websites, information leaflets and major references.

Mayes' Midwifery E-Book McGraw-Hill Education (UK)

Asthma is a chronic relapsing airways disease that represents a major public health problem worldwide. Intermittent exacerbations are provoked by airway mucosal exposure to pro-inflammatory stimuli, with RNA viral infections or inhaled allergens representing the two most common precipitants. In this setting, inducible signaling pathways the airway mucosa play a central role in the initiation of airway inflammation through production of antimicrobial peptides (defensins), cytokines, chemokines and arachidonic acid metabolites that coordinate the complex processes of vascular permeability, cellular recruitment, mucous hyper-secretion, bronchial constriction and tissue remodeling. These signals also are responsible for leukocytic infiltration into the submucosa, T helper-lymphocyte skewing, and allergic sensitization. Currently, it is well appreciated that asthma is a heterogeneous in terms of onset, exacerbants, severity, and treatment response. Current asthma classification methods are largely descriptive and focus on a single aspect or dimension of the disease. An active area of investigation on how to collect, use and visualize multidimensional profiling in asthma. This book will overview multidimensional profiling strategies and visualization approaches for phenotyping asthma. As an outcome, this work will facilitate the understanding of disease etiology, prognosis and/or therapeutic intervention.
