Photography Hack: The Secrets to, Aperture, Shutter Speed, ISO & How to Get The Perfect Exposure The shutter speed is how fast the shutter opens and closes. If the shutter is open longer, more light is let into the camera. If it opens and closes really fast, less light is let in. If you have a wide open aperture, your shutter speed will need to be faster, because you're already letting a lot of light in the lens opening. Mastering the Exposure Triangle for Newbies If you are using a shutter speed of 1/4000 of a second, even a race car going at top speed will be "frozen." Try to keep your shutter speed at or above 1/500 of a second when you need to "stop the action." There are a few ways to do this: 1. Open the Aperture: Make sure the aperture of your camera is opened up. If you do this in an automatic mode, the camera should automatically increase your shutter speed.
