The so-called 'Antioch
Incident' - the
confrontation between
the apostles Peter and
Paul in Galatians
2.11-21 - continues to
be a source of
controversy in both
scholarly and popular
estimations of the
emergence of the early
Church and the
development of Pauline

theology. Paul and the
Crucified Christ in
Antioch offers an
interesting
interpretation of Paul's
account of and
response to this event,
creatively combining
historical
reconstruction,
detailed exegesis, and
theological reflection.
S. A. Cummins argues
that the nature and
significance of the
central issue at stake
in Antioch - whether
the Torah or Jesus
Christ determines who
are the people of God -
gains great clarity and
force when viewed in
relation to a
Maccabean martyr
model of Judaism as
now christologically
reconfigured and
redeployed in the life
and ministry of the
apostle Paul.

 The "water engine" is an invention unfortunately invented many times. Hydrogen from water is very abundant, renewable and can be used in both energy poor and rich countries. Crude oil and natural gas are limited energy resources. But there are many people who think that certain promising technologies have been suppressed by various political or economic powers, usually with the purpose of protecting their investments and interests and, at the already more absurd extremes of the conspiracy illogical, for sinister motivations of much greater scope. In this new work, the versatile composer and writer Van Jaag,

accompanies us on an exciting journey through the history of this unknown invention and its invented inventors.

What happened at 10 Rillington Place was so shocking and gruesome that even today everyone over a certain age still remembers the case with a shudder. In 1950, Timothy Evans was hanged for the violent murder of his baby daughter; he was also assumed to have murdered his wife. Then, less than three years later, another tenant, John Christie, was found to have killed at least six women, hiding their bodies in the garden, under floorboards and in a concealed kitchen alcove. Christie followed Evans to the gallows. It seemed unlikely that two murderers were living at 10 Rillington Place, and the evidence that emerged in the Christie case eventually led to

Evans receiving a pardon. But there was also circumstantial evidence that Evans had indeed killed his wife and child. Crime student Edna Gammon firmly believes that Evans was guilty. In *A House To Remember*, she explains why. [Science Focus 3](#) Wiley Hydrogen Fuel Cells for Road Vehicles addresses the main issues related to the application of hydrogen fuel cell technology in the road transportation sector. A preliminary treatment is given on fuel resources and atmospheric pollution concerns which are closely related to the current technology (internal combustion engine) used for moving people and goods. The authors deal, in particular, with the problems that can

hinder a widespread hydrogen market (production, storage and distribution), as well as giving an analysis of fuel cell technologies available for utilization of this energy carrier in the automotive field. *Hydrogen Fuel Cells for Road Vehicles* also examines the concerns faced during the design and realization of a PEM fuel cell system with optimal size and efficiency, evidencing the impact of the individual auxiliary components on energy losses and dynamic stack performance. The book ends with the analysis of two practical case studies on fuel cell propulsion systems. *Hydrogen Fuel Cells for Road Vehicles* is a useful text for researchers,

professionals and advanced students in the fields of automotive and environmental engineering.

Roman Imperialism and Local Identities

Springer Nature

In this book, Louise Revell examines questions of Roman imperialism and Roman ethnic identity and explores Roman imperialism as a lived experience based around the paradox of similarity and difference. Her case studies of public architecture in several urban settings provides an understanding of the ways in which urbanism, the emperor and religion were part of the daily encounters of the peoples in these communities. Revell applies the ideas of agency and practice in

her examination of the structures that held the empire together and how they were implicated within repeated daily activities. Rather than offering a homogenized "ideal type" description of Roman cultural identity, she uses these structures as a way to understand how these encounters differed between communities and within communities, thus producing a more nuanced interpretation of what it was to be Roman. Bringing an innovative approach to the problem of Romanization, Revell breaks from traditional models and cuts across a number of entrenched debates such as arguments about the imposition of Roman culture or

resistance to Roman rule.

The Modern Voice of an Irish Immigrant is author Imelda

Cummins-DeMelkon's fascinating account of her experience growing up in Ireland as one of twelve children, and the struggle for autonomy and independence that led to her choice of immigration to the United States. The author speaks honestly of the conflicts she experienced as a child and the overzealous paternal control that dominated her young life. The reader follows

the author's journey as it weaves between her experiences in both countries. Ultimately, The Modern Voice of an Irish Immigrant shows us that through a deep commitment to personal growth, one can indeed emerge whole and able to enjoy a full and complete life. Among the highly interesting topics the book explores are the changing face of the Catholic Church in Ireland and the United States, the uniform wish of immigrants to recreate the best of the culture they left behind, what it is to be a conscientious parent, the reality of ill and aging parents, and finally, the joy of the discovery of a life that is worth the often challenging effort. Electrochemical Power Sources: Fundamentals, Systems, and Applications

Elsevier Essential for electrical installers and installation designers, the IEE Wiring Regulations (BS 7671) have been completely restructured and updated for the first time in over a decade: this 17th Edition of the IEE Wiring Regulations (BS 7671: 2008) will come into effect in June 2008. Guide to the Wiring Regulations is an authoritative and accessible guide to the 17th Edition, illustrating the changes and providing real solutions to the problems that can often occur with practical interpretation. Written and developed by the Electrical Contractors'

Association, Guide to the Wiring Regulations brings a wealth of experience to the subject and offers clear explanations of the changes in the Standard. Starting with full coverage of the legal requirements the book then goes on to provide extensive advice on circuit design, selection and erection, wiring systems, earthing and bonding; explore the additional requirements of the Standard for protection against voltage disturbances and implementation of measures against electromagnetic influences (EMC); elaborate on the alterations to the inspection and testing requirements; feature practical information on the new special

locations included in the 17th Edition, particularly exhibitions, shows and stands, floor and ceiling heating systems, mobile or transportable units and photovoltaic power systems; highlight the changes made in the new edition to existing special locations, including bathrooms, swimming pools, agricultural and horticultural premises and caravan/camping parks. Guide to the Wiring Regulations is an outstanding resource for all users of the 17th Edition IEE Wiring Regulations (BS 7671: 2008) including electricians who want a better understanding of the theory behind the Standard, electrical technicians, installation engineers, design engineers, and apprentices. Both

trainees and practitioners will find this guide indispensable for understanding the impact of the changes introduced in the 17th Edition (BS 7671: 2008). Additional supporting material is available at www.wiley.com/go/eca_wiringregulations

This contributed volume is based on talks given at the August 2016 summer school “Fluids Under Pressure,” held in Prague as part of the “Prague-Sum” series. Written by experts in their respective fields, chapters explore the complex role that pressure plays in physics, mathematical modeling, and fluid flow analysis. Specific topics covered include:

- Oceanic and atmospheric dynamics
- Incompressible flows
- Viscous compressible flows
- Well-posedness of the Navier-Stokes

equations Weak solutions to the Navier-Stokes equations Fluids Under Pressure will be a valuable resource for graduate students and researchers studying fluid flow dynamics.
