general-purpose programming language that is class-based and having concurrent programming features. It has multi-threading features too. It is static, safe and strongly typed programming language. Object Oriented Programming in Java | Concepts Of OOP In Java Fundamentals of object-oriented programming. Object-oriented programming is a programming paradigm where everything is represented as an object. Objects pass messages to each other. Each object decides what to do with a received message. OOP focuses on each object's states and behaviors. What Are Objects? An object is an entity that has states and behaviors. For example, dog, cat, and vehicle. Object-Oriented Programming Principles in Java: OOP ...The fundamental concept of object-oriented programming is the class. A class is the set of instructions that describe how an instance can behave and what information it contains. Object-Oriented Java | Codecademy Java is an object-oriented language. Class and Object are the roots of an object-oriented language. Everything in Java is related to Class and Object. Class definition in Java: A class is a blueprint of an object.
