CRC Press  
One of the most widely  
read texts on the  
subject, Boatbuilding

Manual has been used for years as a standard reference at both boatbuilding and design schools. This fourth edition emphasizes traditional wooden construction but also surveys plywood, wood-epoxy, fiberglass, steel, aluminum, and other boatbuilding methods. The chapters on interpreting plans, lofting, and moldmaking are common to all methods. New to this edition are several chapters arising from the Miscellaneous Details chapter of earlier editions; an appendix on sharpening tools; expanded tables of metric equivalents; an expanded and annotated source guide for plans, fasteners, hardware,

wood, and other staples of boatbuilding; and a list of additional reading. Thoroughly updated with respect to modern tools and materials, Boatbuilding Manual remains both a professional reference and the first book a budding amateur should buy.

With such a wide diversity of properties and applications, is it any wonder that industry and academia have such a fascination with polymers? A solid introduction to such an enormous and important field is critical to the modern polymer scientist-to-be, but most of the available books do not stress practical problem solving or

include recent advances. Serving as the polymer book for the new millennium, *Introduction to Polymer Science and Chemistry: A Problem Solving Approach* unites the fundamentals of polymer science and polymer chemistry in a seamless presentation. Emphasizing polymerization kinetics, the author uses a unique question-and-answer approach when developing theory or introducing new concepts. The first four chapters introduce polymer science, focusing on physical and molecular properties, solution behavior, and molecular weights. The remainder of the book explores polymer chemistry, devoting individual, self-

contained chapters to the main types of polymerization reactions: condensation; free radical; ionic; coordination; and ring-opening. It introduces recent advances such as supramolecular polymerization, hyperbranching, photoemulsion polymerization, the grafting-from polymerization process, polymer brushes, living/controlled radical polymerization, and immobilized metallocene catalysts. With numerical problems accompanying the discussion at every step along with numerous end-of-chapter exercises, *Introduction to Chemical Polymer Science: A Problem*

Solving Approach is an ideal introductory text and self-study vehicle for mastering the principles and methodologies of modern polymer science and chemistry.

Authoritatively written by a team of historians, scientists, and anthropologists, this book tells the stories behind these innovations, presenting a comprehensive history of the world through invention and discovery. From stone tools and fire at the dawn of humankind to

today's self-driving cars, inventions have moved society forward at a remarkable pace. This informative volume shows just how much some of the inventions that we take for granted have transformed the world.

The Economics of Killing Pearson

This book is concerned with the steady state hydraulics of natural gas and other compressible fluids being transported through pipelines. Our main approach is to determine the flow rate possible and compressor station horsepower required within the limitations of pipe strength, based on the pipe materials and grade. It addresses the scenarios where one or more compressors may be required depending on

the gas flow rate and if discharge cooling is needed to limit the gas temperatures. The book is the result of over 38 years of the authors' experience on pipelines in North and South America while working for major energy companies such as ARCO, El Paso Energy, etc.

The practical reference book and guide to fans, ventilation and ancillary equipment with a comprehensive buyers' guide to worldwide manufacturers and suppliers. Bill Cory, well-known throughout the fans and ventilation industry, has produced a comprehensive, practical reference with a broad scope: types of fans, how and why they work, ductwork, performance standards, testing, stressing, shafts and bearings. With advances in technology,

manufacturers have had to continually improve the performance and efficiency of fans and ventilation systems; as a result, improvements that once seemed impossible have been achieved. Systems now range in all sizes, shapes, and weight, to match the ever increasing applications. An important reference in the wake of continuing harmonisation of standards throughout the European Union and the progression of National and International standards. The Handbook of Fans and Ventilation is a welcome aid to both mechanical and electrical engineers. This book will help you to... • Understand how and why fans work

Together with the fundamentals of probability, random processes and statistical analysis, this insightful book also presents a broad range of advanced topics and applications. There is extensive coverage of Bayesian vs. frequentist statistics, time series and spectral representation, inequalities, bound and approximation, maximum-likelihood

estimation and the expectation-maximization (EM) algorithm, geometric Brownian motion and Itô process. Applications such as hidden Markov models (HMM), the Viterbi, BCJR, and Baum-Welch algorithms, algorithms for machine learning, Wiener and Kalman filters, and queueing and loss networks are treated in detail. The book will be useful to students and researchers in such areas as communications, signal processing, networks, machine learning, bioinformatics, econometrics and mathematical finance. With a solutions manual, lecture slides, supplementary materials and MATLAB programs all available online, it is ideal for

classroom teaching as well as a valuable reference for professionals. *How the West Fuels War and Poverty in the Developing World* Cambridge University Press Globalization has created an interconnected world, but has not diminished violence and militarism. The Economics of Killing describes how the power of global elites, entrenched under globalization, has created a deadly cycle of violence. In this groundbreaking work, Vijay Mehta shows how attempts at peaceful national development are routinely blocked by Western powers. He centers the 2008 financial crisis in US attempts to block China's model of

development. He shows how Europe and the US conspire with regional dictators to prevent countries from developing advanced industries, and how this system has fed terrorism. Mehata argues that a different world is possible, based on policies of disarmament, demilitarization, and sustainable development. This original and thought-provoking book will be of great interest to anyone concerned about the consequences of endless war fueled by the West.

In the second of the River Cottage Handbook series, Pam Corbin explains how to turn Britain's seasonal gluts of fruit,

vegetables, flowers and herbs into delicious preserves to enjoy all year around. Preserving is a centuries-old way to make the most out of every season, stretching the more bountiful months into the sparser ones - and what's more, it is fun, rewarding and easy to learn. Explaining the history, science and basic processes of preserving, Pam Corbin guides us through a world of jams, jellies, butters, curds, pickles, chutneys, cordials, liqueurs, vinegars and sauces that can be made from local produce throughout the year. She includes 75 recipes, covering everything from traditional favourites such as raspberry jam, lemon curd, quince cheese and sloe gin, to

fresh new combinations such as apple butter, cucumber pickle and nettle pesto. The handbook includes seasonable tables, regional maps, flow charts of all the preserving processes and full-colour photographs throughout, and is completed by a directory of equipment and useful addresses. With a textured hard cover and an introduction by Hugh Fearnley-Whittingstall, *Preserves* is a concise and inspiring guide to an age-old art for kitchen beginners and keen preservers alike. Concepts and Applications, Second Edition CRC Press

Hydrogen Power: An Introduction to Hydrogen Energy and its Applications explains how hydrogen

is produced, used, and handled and shows that the use of chemical hydrogen power has enormous advantages as an energy storage, transport, and use medium. Organized into seven chapters, this book first describes the chemical and physical properties of hydrogen. Subsequent chapters elucidate the current industrial uses of hydrogen, methods of producing hydrogen, and hydrogen transportation and storage. Hydrogen safety and environmental considerations are also addressed.

This book covers liquid pipeline hydraulics as it applies to transportation of liquids through pipelines in a single phase steady state environment. It will serve as a practical handbook for engineers, technicians and others involved in design and operation of pipelines transporting liquids. Currently, existing books on the subject are mathematically rigorous, theoretical and lack practical applications. Using this book, engineers can better understand and apply the principles of hydraulics to their daily work in the pipeline industry without resorting to complicated formulas and theorems. Numerous examples from the author's real

life experience are included to illustrate application of pipeline hydraulics.

 DISCIPLE IV UNDER THE TREE OF LIFE is the final study in the four-phase DISCIPLE program and is prepared for those who have completed BECOMING DISCIPLES THROUGH BIBLE

STUDY. The study concentrates on the Writings (Old Testament books not in the Torah or the Prophets), the Gospel of John, and Revelation. Emphasis on the Psalms as Israel's hymnbook and prayer book leads natural to an emphasis on worship in the study. Present through the entire study is the sense of living toward completion - toward the climax of the message and the promise, extravagantly pictured in Revelation. The image of the tree and the color gold emphasize the prod and promise in the Scriptures for DISCIPLE IV: UNDER THE TREE OF LIFE. The word under in the title is meant to convey invitation, welcome, sheltering, security,

and rest - home at last. Commitment and Time Involved 32 week study Three and one-half to four hours of independent study each week (40 minutes daily for leaders and 30 minutes daily for group members) in preparation for weekly group meetings. Attendance at weekly 2.5 hour meetings. DVD Set Four of the five videos in this set contain video segments of approximately ten minutes each that serve as the starting point for discussion in weekly study sessions. The fifth video is the unique component that guides an interactive worship experience of

the book of Revelation. Under the Tree of Life Scriptures lend themselves to videos with spoken word, art, dance, music, and drama. Set decorations differs from segment to segment depending on the related Scripture and its time period. Set decoration for video segments related to the Writings generally has a Persian theme. Set decoration for the New Testament video segments emphasizes the simpler life of New Testament times.
