model of a dihybrid cross is based in Mendelian genetics, so we will use Mendel's peas for our example. See the image below. This image describes a dihybrid cross between two pea plants, looking at the traits of pod color and pod shape. The pods can be yellow or green, which is determined by the "R" gene. [Dihybrid Cross - Definition, Examples and Quiz | Biology](#) ...What is an example of a Dihybrid cross? Mendel's experiment with peas is a classic example of a dihybrid cross. The experiment was done to highlight if any relationship exists between various pairs of alleles. [Dihybrid Cross - Definition and Examples of Dihybrid Cross](#) Look at the above illustration. The drawing on the left

shows a monohybrid cross and the drawing on the right shows a dihybrid cross. The two different phenotypes being tested in this dihybrid cross are seed color and seed shape. One plant is homozygous for the dominant traits of yellow seed color (YY) and round seed shape (RR)—this genotype can be expressed as (YYRR)—and the other plant displays homozygous recessive traits of green seed color and wrinkled seed shape (yyrr).
