Comfort Theory by Katharine Kolcaba - Current Nursing The Theory of Comfort contains three parts (assertions) to be tested separately or as a whole. Part I states that comforting interventions, when effective, result in increased comfort for recipients (patients and families), compared to a pre-intervention baseline. Theory of Comfort | Nurse Key Kolcaba's theory of holistic comfort was first developed in the nursing literature in 1994 with the theorist's seminal work examining holistic comfort as a concept for nursing practice. According to Kolcaba comfort has been conceptualized and developed as a holistic outcome; however up until her work it had not been developed as a broader theory for nursing practice (Kolcaba, 1994). Sample: Kolcaba's Theory of Comfort The Theory of Comfort is widely used as an organizing framework for Magnet application and recertification of Magnet Status. Nurses often choose this framework themselves because it describes what they want to do for patients and families, and what patients want from nurses during their hospitalization. 33. Theory of comfort | Nurse Key Human beings have holistic responses to complex stimuli. Comfort is a holistic outcome of effective nursing care. Human beings have a need for comfort and will seek comfort wherever possible. Nurses are in a position to

identify the comfort needs of their patients, design comfort measures, and assess outcomes to support enhanced comfort. Comfort Care in Nursing: The Concepts The theory of comfort also offers a way to reconceptualize nurse productivity. Whether theories are grand or mid range (MR), they organize disciplinary thinking and influence practice and research. By definition, grand theories are abstract, complicated, and removed from practice. Evolution of the Mid Range Theory of Comfort for Outcomes ... Assessing patients for their level of comfort utilizing a positive, holistic manner is important for measuring effectiveness of comforting strategies. Comfort Theory (Kolcaba, 2003), with its inherent emphasis on physical, psychospiritual, sociocultural, and environmental aspects of comfort, will contribute to a proactive, well diverse and articulated, and multifaceted approach to care. Comfort Care in Nursing: Comfort Theory and Nursing Practice The nursing outcome of holistic comfort encompasses physical, psychospiritual, social, and environmental aspects of human nature. The primary purpose of this study was to test four propositions about the nature of comfort: (a) Comfort has equal proportions of state and trait characteristics; (b) comfort is sensitive to changes over time; Empirical Evidence for the Nature of Holistic Comfort ... Holistic comfort focuses on treating the child's whole procedural experience and includes more than simply reducing pain. In this literature review, 33 intervention studies were examined. These studies focused on evaluating comfort effects from nursing interventions on pain, anxiety, fear, and distress. Holistic Comfort Interventions
