Commodity branding did not emerge with contemporary global capitalism. In fact, the authors of this volume show that the cultural history of branding stretches back to the beginnings of urban life in the ancient Near East and Egypt, and can be found in various permutations in places as diverse as the Bronze Age Mediterranean and Early

Modern Europe. What the contributions in this volume also vividly document, both in past social contexts and recent ones as diverse as the kingdoms of Cameroon, Socialist Hungary or online eBay auctions, is the need to understand branded commodities as part of a broader continuum with techniques of gift-giving, ritual, and sacrifice. Bringing together the work of cultural anthropologists and archaeologists, this volume obliges specialists

in marketing and economics to reassess the relationship between branding and capitalism, as well as adding an important new concept to the work of economic anthropologists and archaeologists.

Anarchism, Organization and Management Hachette UK

General chemistry textbooks are usually lengthy and present chemistry to the student as an unconnected list of facts. In inorganic chemistry, emphasis

should be placed on the connections between valence shell electron configuration and the physical and chemical properties of the element. *Basic Principles of Inorganic Chemistry: Making the Connections* is a short, concise book that emphasises these connections, in particular the chemistry of the Main Group compounds. With reference to chemical properties, Lewis Structures, stoichiometry and spider diagrams, students will be able to predict or calculate the

chemistry of simple polyatomic compounds from the valence shell configuration and will no longer be required to memorise vast amounts of factual chemistry. This book is ideal for students taking chemistry as a subsidiary subject as well as honours degree students.

Cambridge International AS/A Level Physics Revision Guide second edition Cambridge University Press
This book bridges an existing gap in the literature relating to the study of workplace abuse, incivility and bullying. It provides broad perspectives to capture some of the diversity associated with the study of (negative) human behaviours using different methodological

approaches, and in different cultural contexts. Studies in the area have grown in leaps and bounds over the last few decades. As we come to know more about the nature of these adverse behaviours, the reasons they happen, and the impact they have on individuals and beyond, new gaps in knowledge emerge. On one hand the paucity of research is assisting in better understanding and management of these negative behaviours, on another, generalised

information without an appreciation of the context in which the behaviours unfold may be detrimental to the cause, especially given a globalised and multicultural world. *Workplace Abuse, Incivility and Bullying* presents findings from under-researched methodological, and unique cultural perspectives. Such an approach will allow us to gain deep insights into the diversity and complexities associated with perceiving, being

subjected to, and experiencing negative behaviours at work. The book has applicability across a broad range of audience from academics through to practitioners, and even victims and suspected perpetrators. *Identifying and Supporting Productive STEM Programs in Out-of-School Settings* Cambridge University Press
An exploration of the theoretical and philosophical background of performance development, this edited collection focuses sharply

on the practical aspects associated with it within the healthcare sector.

"You might think that anarchism and management are opposed, but this book shows how an understanding of the long history of anarchist ideas allows us to understand the problems of contemporary organizing much more clearly.

Anarchism is a theory of organizing, and in times when global capitalism is in question, we need new

ideas more than ever. The reader of this book will learn how anarchist ideas are relevant to today's management problems. In a series of student friendly short chapters on contemporary topics, the authors challenge the common sense that has allowed particular forms of organization and market to become globally dominant. Do we always need leaders? Is technological change always a good thing? Are markets the best way to arrange forms of exchange? This

challenging book is essential for anyone who wants to understand what is wrong with business school theory, and what we might do about it. For students and teachers of management, the standard textbook reproduces the dominant ideas about the way that business should be done. This book turns those ideas on their head, asking awkward questions about authority, technology and markets, and demanding that its readers think hard about whether they want to

reproduce those ideas too. Students of management, like everyone else, know that the current global system is broken but they don't know what they can do about it. This unique book uses two hundred years of anarchist ideas to give readers a clear guide for building the organizations and businesses of the future, and places choice and responsibility at the centre of making a new world for people and planet"--

Reproductive Injustice

A troubling study of the role that medical racism plays in the lives of black women who have given birth to premature and low birth weight infants. Black women have higher rates of premature birth than other women in America. This cannot be simply explained by economic factors, with poorer women lacking resources or access to care. Even professional, middle-class black women are at a much higher risk of premature birth than low-income white women in the United States.

Dána-Ain Davis looks into this phenomenon, placing racial differences in birth outcomes into a historical context, revealing that ideas about reproduction and race today have been influenced by the legacy of ideas which developed during the era of slavery. While poor and low-income black women are often the "mascots" of premature birth outcomes, this book focuses on professional black women, who are just as likely to give birth prematurely. Drawing on an impressive array of

interviews with nearly fifty mothers, fathers, neonatologists, nurses, midwives, and reproductive justice advocates, Dána-Ain Davis argues that events leading up to an infant's arrival in a neonatal intensive care unit (NICU), and the parents' experiences while they are in the NICU, reveal subtle but pernicious forms of racism that confound the perceived class dynamics that are frequently understood to be a central factor of premature birth. The book

argues not only that medical racism persists and must be considered when examining adverse outcomes—as well as upsetting experiences for parents—but also that NICUs and life-saving technologies should not be the only strategies for improving the outcomes for black pregnant women and their babies. Davis makes the case for other avenues, such as community-based birthing projects, doulas, and midwives, that support women during pregnancy and labor are just as

important and effective in avoiding premature births and mortality. Solid State Chemistry today is a frontier area of mainstream chemistry, and plays a vital role in the development of materials. The present work, consisting of a selection of Prof. C N R Rao's papers, covers most of the important aspects of solid state chemistry and provides the flavor of the subject, showing how the subject has evolved over the years. The book

is up-to-date, and will be useful to students, teachers, beginning researchers and practitioners in solid state chemistry as well as in the broader area of materials science.

Design, Make, Play: Growing the Next Generation of STEM Innovators is a resource for practitioners, policymakers, researchers and program developers that illuminates creative, cutting edge ways to

inspire and motivate young people about science and technology learning. The book is aligned with the National Research Council's new Framework for Science Education, which includes an explicit focus on engineering and design content, as well as integration across disciplines. Extensive case studies explore real world examples of innovative programs that take place in a variety of settings, including schools, museums, community centers, and virtual

spaces. Design, Make, and Play are presented as learning methodologies that have the power to rekindle children's intrinsic motivation and innate curiosity about STEM (science, technology, engineering, and mathematics) fields. A digital companion app showcases rich multimedia that brings the stories and successes of each program—and the students who learn there—to life.

Understanding Pure Mathematics Cambridge University Press

Schubert Studies comprises eleven essays by renowned Schubert scholars and performers. The volume sheds light on certain aspects of Schubert's music and biography which have hitherto remained relatively neglected, or which warrant further investigation. Musical topics include analyses of tempo conventions, transitional procedures and rhythmic organization. There are reassessments of several works, using autograph research, performing

experience and other approaches; while assumptions as to the extent of Schubert's influence on later Czech composers are also brought into question. Concerns with aspects of Schubert's biography, in particular the social and musical circles in which he moved, come under examination in several essays. The final two chapters deal specifically with the composer's relationships with women, and the psychological and physiological illnesses from which he suffered.

Each of the essays here charts new and existing evidence to provide fresh perspectives on these aspects of Schuberts life and music, making this volume an indispensable tool for scholars concerned with his work. *Growing the Next Generation of STEM Innovators* Oxford University Press, USA International A/AS-level Science Revision Guides provide exam-focused texts to guide students through the content and skills of the course to prepare them for their AS
