Evolution of Telecommunication Services Tyndale House Publishers, Inc. Widely respected yoga teacher and author Richard Rosen draws on ancient yoga encyclopedias to explain how yoga was practiced before it became popular in the West. He compares the three main existing sources known to yoga scholars to describe how complex and rich the practice of yoga once was. It included systematic teachings on personal hygiene, good health, and good relationships, and other practices of yoga that went far beyond just the physical postures. Each section of the book offers a guided practice session of ancient poses and breathing techniques to enable readers to connect to the roots of their yoga and to offer a framework from which to understand the sequences they use in their regular sessions.

In the telecom world, services have usually been conceived with a specific mindset. This mindset has defined the traditional characteristics of these services; services distinguished by their linkage with the access network, tight control over service use (e.g., authentication, billing), lack of deep personalization capabilities (mass services only) and reliance on standardization to achieve end-to-

end interoperability between all the actors of the value chain (e.g., operators, platform manufacturers, device manufactures). This book offers insights into this complex but exciting world of telecommunications characterized by constant evolution, and approaches it from technology as well as business perspectives. The book is appropriately structured in three parts: (a) an overview of the state-of-the-art in fixed/mobile NGN and standardization activities; (b) an analysis of the competitive landscape between operators, device manufactures and OTT providers, emphasizing why network operators are challenged on their home turf; and (c) opportunities for business modeling and innovative telecom service offers.

The book is the first annotated reader to focus specifically on the discipline of zoosemiotics. Zoosemiotics can be defined today as the study of signification, communication and representation within and across animal species. The name for the field was proposed in 1963 by the American semiotician Thomas A. Sebeok. He also established the framework for the paradigm by finding and tightening connections to predecessors, describing terminology, developing methodology and setting directions for possible future studies. The volume includes a wide selection of original texts accompanied by editorial introductions. An extensive opening introduction discusses the place of zoosemiotics among other sciences as well as its inner dimensions; the understanding of the concept of communication in zoosemiotics, the heritage of biologist Jakob v. Uexküll; contemporary developments in zoosemiotics and other issues. Chapter introductions discuss the background of the authors and selected texts, as well as other relevant texts. The selected texts cover a wide range of topics, such as semiotic constitution of nature, cognitive capabilities of animals, typology of animal expression and many other issues. The roots of zoosemiotics can be traced back to the works of David Hume and John Locke. Great emphasis is placed on the heritage of Thomas A. Sebeok, and a total of four of his essays are included. The Reader also includes influential studies in animal communication (honey bee dance language, vervet monkey alarm calls) as well as theory elaborations by Gregory Bateson and others. The reader concludes with a section dedicated to contemporary research. *Readings in Zoosemiotics* is intended as a primary source of information about zoosemiotics, and also provides additional readings for students of cognitive ethology and animal communication studies.

Picking up where Berton Roueché's *The Medical Detectives* left off, *The Deadly Dinner Party* presents fifteen edge-of-your-seat, real-life medical detective stories written by a practicing physician. Award-winning author Jonathan Edlow, M.D., shows the doctor as detective and the epidemiologist as elite sleuth in stories that are as gripping as the best thrillers. In these stories a notorious stomach bug turns a suburban dinner party into a disaster that almost claims its host; a

diminutive woman routinely eats more than her football-playing boyfriend but continually loses weight; a young executive is diagnosed with lung cancer, yet the tumors seem to wax and wane inexplicably. Written for the lay person who wishes to better grasp how doctors decipher the myriad clues and puzzling symptoms they often encounter, each story presents a very different case where doctors must work to find the accurate diagnosis before it is too late. Edlow uses his unique ability to relate complex medical concepts in a writing style that is clear, engaging and easily understandable. The resulting stories both entertain us and teach us much about medicine, its history and the subtle interactions among pathogens, humans, and the environment.
