Concepts of  
Biology is  
designed for  
the single-  
semester  
introduction to  
biology course  
for non-  
science  
majors, which  
for many  
students is  
their only  
college-level  
science  
course. As  
such, this  
course  
represents an  
important  
opportunity  
for students to  
develop the  
necessary  
knowledge,  
tools, and

skills to make  
informed  
decisions as  
they continue  
with their  
lives. Rather  
than being  
mired down  
with facts and  
vocabulary,  
the typical  
non-science  
major student  
needs  
information  
presented in a  
way that is  
easy to read  
and  
understand.  
Even more  
importantly,  
the content  
should be  
meaningful.  
Students do  
much better  
when they  
understand  
why biology is  
relevant to  
their everyday

lives. For  
these reasons,  
Concepts of  
Biology is  
grounded on  
an  
evolutionary  
basis and  
includes  
exciting  
features that  
highlight  
careers in the  
biological  
sciences and  
everyday  
applications of  
the concepts  
at hand. We  
also strive to  
show the  
interconnecte  
dness of  
topics within  
this extremely  
broad  
discipline. In  
order to meet  
the needs of  
today's  
instructors  
and students,

we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand-- and apply-- key concepts.

actively learn and revise pathophysiology. The simple structure and expanded answers provide effective feedback, adding value and support for learning. The book will be a useful partner to support many of the pathophysiology textbooks currently available. It should be included on recommended reading lists for students. It will also find a useful place in support of teaching and professional development."

Jim Jolly, Head of Academic Unit for Long Term Conditions, School of Healthcare, University of Leeds, UK

"This book will be a helpful tool for all student nurses (regardless of branch), newly qualified nurses and nurses returning to practice. The language used in the book is easy to understand and I found the layout to be very user friendly and ideal for revising. I would recommend this book to all my colleagues."

This book provides the reader with a range of questions and explanations related to essential aspects of the neural, hormonal and gastrointestinal physiology. The focus of the book is on understanding

the homeostatic control in each system by using questions to challenge the reader to think through physiology. In addition, functional integration of the different organ systems is highlighted in an area such as neuroendocrinology and in the study of the neural mechanisms in the gastrointestinal tract. This is the second Physiology Question-Based Learning book, written

by Prof. Dr. Cheng. He has taught physiology for thirty years. He has pioneered the international physiology quiz, which is now an annual event at the University of Malaya in Kuala Lumpur, Malaysia and at universities around the world. As quiz master, he has designed challenging questions to test concepts and understanding in physiology. This book reflects the style of questions asked during

the physiology quiz. The questions are designed to stimulate integrative and homeostatic thinking in physiology. The Physiology Question-Based Learning books will be helpful to all students of Physiology in medicine, dentistry, pharmacy and allied health sciences.
