Cutting Transport CO2 Emissions What Progress? BRILL

Numerical Methods in Geotechnical Engineering IX contains 204 technical and scientific papers presented at the 9th European Conference on Numerical Methods in Geotechnical Engineering (NUMGE2018, Porto, Portugal, 25–27 June 2018). The papers cover a wide range of topics in the field of computational geotechnics, providing an overview of recent developments on scientific achievements, innovations and engineering applications related to or employing numerical methods. They deal with subjects from emerging research to engineering practice, and are grouped under the following themes: Constitutive modelling and numerical implementation Finite element, discrete element and other numerical methods. Coupling of diverse methods Reliability and probability analysis Large deformation - large strain analysis Artificial intelligence and neural networks Ground flow, thermal and coupled analysis Earthquake engineering, soil dynamics and soil-structure interactions Rock mechanics Application of numerical methods in the context of the Eurocodes Shallow and deep foundations Slopes and cuts Supported excavations and retaining walls Embankments and dams Tunnels and caverns (and pipelines) Ground improvement and reinforcement Offshore geotechnical engineering Propagation of vibrations Following the

objectives of previous eight thematic conferences, (1986 Stuttgart, Germany; 1990 Santander, Spain; 1994 Manchester, United Kingdom; 1998 Udine, Italy; 2002 Paris, France; 2006 Graz, Austria; 2010 Trondheim, Norway; 2014 Delft, The Netherlands), Numerical Methods in Geotechnical Engineering IX updates the state-of-the-art regarding the application of numerical methods in geotechnics, both in a scientific perspective and in what concerns its application for solving practical boundary value problems. The book will be much of interest to engineers, academics and professionals involved or interested in Geotechnical Engineering.

Dialogues in Urban and Regional Planning Routledge

Accident records show that sooner or later hindrances near a waterway will be hit by ships, be it navigation marks, bridge structures, reefs or shallows. With this background modelling and analysis of ship collisions to bridge structures have an increasing importance as the basis for rational decision making in connection with planning, design and construction of bridges over navigable waters. The International Symposium on Ship Collision Analysis focuses on advances in accident analysis, collision prevention and protective measures. The publication *Ship Collision Analysis, Proceedings of the 1998 International Symposium*, presents the papers of international experts in ship collision analysis and structural design. The contributions give the state of the art and point to future development trends with in the focus areas.

 Maintenance, Safety, Risk, Management
 and Life-Cycle Performance of Bridges
 contains lectures and papers presented
 at the Ninth International Conference on
 Bridge Maintenance, Safety and
 Management (IABMAS 2018), held in
 Melbourne, Australia, 9-13 July 2018.
 This volume consists of a book of
 extended abstracts and a USB card
 containing the full papers of 393
 contributions presented at IABMAS 2018,
 including the T.Y. Lin Lecture, 10
 Keynote Lectures, and 382 technical
 papers from 40 countries. The
 contributions presented at IABMAS 2018
 deal with the state of the art as well as
 emerging concepts and innovative
 applications related to the main aspects
 of bridge maintenance, safety, risk,
 management and life-cycle performance.
 Major topics include: new design
 methods, bridge codes, heavy vehicle
 and load models, bridge management
 systems, prediction of future traffic
 models, service life prediction, residual
 service life, sustainability and life-cycle
 assessments, maintenance strategies,
 bridge diagnostics, health monitoring,
 non-destructive testing, field testing,
 safety and serviceability, assessment
 and evaluation, damage identification,
 deterioration modelling, repair and
 retrofitting strategies, bridge reliability,
 fatigue and corrosion, extreme loads,
 advanced experimental simulations, and
 advanced computer simulations, among
 others. This volume provides both an up-
 to-date overview of the field of bridge
 engineering and significant contributions

to the process of more rational decision-
 making on bridge maintenance, safety,
 risk, management and life-cycle
 performance of bridges for the purpose
 of enhancing the welfare of society. The
 Editors hope that these Proceedings will
 serve as a valuable reference to all
 concerned with bridge structure and
 infrastructure systems, including
 students, researchers and engineers
 from all areas of bridge engineering.

World Highways Routledge
 Factoring health and related costs into
 decision making is essential to
 confronting the nation's health problems
 and enhancing public well-being. Some
 policies and programs historically not
 recognized as relating to health are
 believed or known to have important
 health consequences. For example,
 public health has been linked to an array
 of policies that determine the quality
 and location of housing, availability of
 public transportation, land use and
 street connectivity, agricultural practices
 and the availability of various types of
 food, and development and location of
 businesses and industry. Improving
 Health in the United States: The Role of
 Health Impact Assessment offers
 guidance to officials in the public and
 private sectors on conducting HIAs to
 evaluate public health consequences of
 proposed decisions -- such as those to
 build a major roadway, plan a city's
 growth, or develop national agricultural
 policies -- and suggests actions that
 could minimize adverse health impacts
 and optimize beneficial ones. Several
 approaches could be used to incorporate
 aspects of health into decision making,
 but HIA holds particular promise because
 of its applicability to a broad array of
 programs, consideration of both adverse
 and beneficial health effects, ability to
 consider and incorporate various types

of evidence, and engagement of communities and stakeholders in a deliberative process. The report notes that HIA should not be assumed to be the best approach to every health policy question but rather should be seen as part of a spectrum of public health and policy-oriented approaches. The report presents a six-step framework for conducting HIA of proposed policies, programs, plans, and projects at federal, state, tribal, and local levels, including within the private sector. In addition, the report identifies several challenges to the successful use of HIA, such as balancing the need to provide timely information with the realities of varying data quality, producing quantitative estimates of health effects, and engaging stakeholders.

Synthesis of the Reports of the Scientific, Environmental Effects, and Technology and Economic Assessment Panels of the Montreal Protocol Routledge

This peer review of United Kingdom reviews its development policies and programmes. It assesses not just the performance of its development co-operation agency, but also policy and implementation.

Structures and Architecture. A Viable Urban Perspective? contains extended abstracts of the research papers and prototype submissions presented at the Fifth International Conference on Structures and Architecture (ICSA2022, Aalborg, Denmark, 6-8 July 2022). The book (578 pages) also includes a USB with the full texts of the papers (1448 pages). The contributions on creative and scientific aspects in the conception and construction of structures as architecture, and on the role of

advanced digital-, industrial- and craft -based technologies in this matter represent a critical blend of scientific, technical, and practical novelties in both fields. Hence, as part of the proceedings series Structures and Architecture, the volume adds to a continuous exploration and development of the synergetic potentials of the fields of Structures and Architecture. With each volume further challenging the conditions, problems, and potentials related to the art, practice, and theory of teaching, researching, designing, and building structures as vehicles towards a viable architecture of the urban environment. The volumes of the series appear once every three years, in tandem with the conferences organized by the International Association of Structures and Architecture and are intended for a global readership of researchers, practitioners, and students, including architects, structural and construction engineers, builders and building consultants, constructors, material suppliers, planners, urban designers, anthropologists, economists, sociologists, artists, product manufacturers, and other professionals involved in the design and realization of architectural, structural, and infrastructural projects.

This book collates, reviews and synthesizes information on how soil organic carbon (SOC) stocks differ among major terrestrial biomes of the U.S.A. Information on soil inorganic carbon (SIC) stocks for different terrestrial biomes of the U.S.A. will also be presented. The book deliberates options for increasing SOC stocks and enhancing SOC sequestration in terrestrial biomes by soil and land-use management practices. It concludes with an overview of terrestrial biomes of the U.S.A. where targeted soil and land-use management practices may result in the greatest increases in SOC stocks and enhancements in SOC sequestration.

Advances in Photogrammetry, Remote Sensing and Spatial Information Sciences: 2008 ISPRS Congress Book Cambridge University Press

Reviews the progress OECD and ECMT countries have made in reducing transport sector CO₂ emissions and makes recommendations for the focus of future policies.

[Routledge Handbook of Environmental Impact Assessment](#) FIB - International

Federation for Structural Concrete

The idea of preparing a technical document for the repairs and interventions upon concrete structures goes back to the former fib COM5: Structural Service Life Aspects, being the goal of the then TG5.9. After a long period of reduced activity, and taking into account the reorganization of fib commissions that meanwhile took place, on June 2017 a different approach was proposed to push forward the task of TG8.1 (formerly TG5.9). The (new) goal of TG 8.1 was to deliver a 'how-to-do' guide, gathering together protection, repair, and strengthening techniques for concrete structures. Chapters are intended to provide both guidelines and case-studies, serving as support to the application of fib MC2020 pre-normative specifications. Each chapter was written by an editorial team comprising desirably at least a researcher, a designer and a contractor. Templates have been prepared in order to harmonize the contents and the presentation of the different methods. Following the writing process, chapters were reviewed by experts and, after amendments by the authors, they underwent a second review process by COM8 and TG3.4 members, as well as by different practitioners. For each protection, repair and strengthening method addressed in this guide, readers have a description of when to adopt it, which materials and systems are required, which techniques are available, and what kind of equipment is needed. It then presents a summary of stakeholders' roles and qualifications, design guidelines referring to most relevant codes and references, the intervention procedure, quality control measures and monitoring and maintenance activities. Due to the

extent of the guide, it was decided to publish it as bulletin 102, addressing protection and repair methods, and bulletin 103, addressing strengthening methods. We would like to thank the authors, reviewers and members of COM8 and TG3.4 for their work in developing this fib Bulletin, which we hope will be useful for professionals working in the field of existing concrete structures, especially those concerned with life-cycle management and conservation activities. As noted above, this Bulletin is also intended to act as a background and supporting document to the next edition of the fib Model Code for Concrete Structures, which is currently under development under the auspices of TG10.1 with the working title of "fib Model Code 2020".

Contractions CRC Press

Developing countries in the tropics have different natural conditions and different institutional and financial situations to industrialized countries. However, most textbooks on highway engineering are based on experience from industrialized countries with temperate climates, and deal only with specific problems. Road Engineering for Development (published as Highway and Traffic Engineering in Developing Countries in its first edition) provides a comprehensive description of the planning, design, construction and maintenance of roads in developing countries. It covers a wide range of technical and non-technical problems that may confront road engineers working in this area. The technical content of the book has been fully updated and current development issues are focused on. Designed as a fundamental text for civil engineering students this book also offers a broad, practical view of the subject for practising engineers. It has been written

with the assistance of a number of world-renowned specialist professional engineers with many years experience in Africa, the Middle East, Asia and Central America.

Real Social Science OECD Publishing
In The Seal Hunt: Cultures, Economies and Legal Regimes, Sellheim offers an analysis of the cultural, economic and legal aspects circling around the global seal hunt, with a focus on the European Union and the World Trade Organization.
Assessment Report of the Technology and Economic Assessment Panel Springer Science & Business Media
Real Social Science presents a new, hands-on approach to social inquiry. The theoretical and methodological ideas behind the book, inspired by Aristotelian phronesis, represent an original perspective within the social sciences, and this volume gives readers for the first time a set of studies exemplifying what applied phronesis looks like in practice. The reflexive analysis of values and power gives new meaning to the impact of research on policy and practice. *Real Social Science* is a major step forward in a novel and thriving field of research. This book will benefit scholars, researchers and students who want to make a difference in practice, not just in the academy. Its message will make it essential reading for students and academics across the social sciences.

Globally, environmental impact assessment (EIA) is one of the most enduring and influential environmental management tools. This handbook provides readers with a strong foundation for understanding the practice of EIA, by outlining the different types of assessment while also providing a guide to best practice. This collection deploys a research and practice-based approach to the subject, delivering an overview of EIA as an essential and practical tool of environmental protection, planning, and policy. To best understand the most pertinent issues and challenges surrounding EIA today, this volume draws together prominent researchers, practitioners, and young scholars who share their work and knowledge to cover two key parts. The first part introduces EIA processes and best practices through analytical and critical chapters on the stages/elements of the EIA process and different components and forms of assessment. These provide examples that cover a wide range of assessment methods and cross-cutting issues, including cumulative effects assessment, social impact assessment, Indigenous-led assessment, risk assessment, climate change, and gender-based assessment. The second part provides jurisdictional reviews of the European Union, the US National Environmental Policy Act, recent assessment reforms in Canada, EIA in developing economies, and the EIA context in England. By providing a concise outline of the process followed by in-depth illustrations of approaches,

methods and tools, and case studies, this book will be essential for students, scholars, and practitioners of environmental impact assessment.

Success Strategies and Knowledge Transfer in Cross-Border Consulting Operations analyzes the international operations of consulting firms. Apart from developing a theoretical framework which differs from traditional theories about international trade, the main issues analyzed in this book are: 1) Success determinants when tendering for international consulting contracts; 2) The choice between exports, acquisition of a local firm or establishing a greenfield office when entering foreign markets; 3) The extent and nature of knowledge transfer to emerging markets; 4) The role of development agencies in international consulting projects; 5) The trend towards, and consequences of, more management services included in international projects; 6) The effects on competition when state-owned consulting firms are allowed to operate in the international market. The empirical analysis of these issues is based on a unique database of individual tender documents which Swedish consulting firms have submitted abroad.

Dialogues in Urban and Regional Planning, Volume 4 is a selection of some of the best scholarship in urban and regional planning from around the world. The internationally recognized authors of these award-winning papers take up a range of salient issues from the theory and practice of planning. The topics they address include planning and governance in Zimbabwe, rebuilding after Hurricane Katrina, safety issues in urban spaces, and an analysis of French transportation policies. The breadth of the topics covered in this book will appeal to all those with an interest in urban and regional planning, providing a springboard for further debate and research. The papers focus particularly on how planning institutions can meet contemporary environmental, demographic, economic, and socio-spatial challenges. The *Dialogues* books are published in association with the Global Planning Education Association Network (GPEAN) and its member planning schools associations. These associations represent 360 planning schools in nearly fifty countries around the globe. They have selected these papers based on regional competitions.
