 A twin-screw extruder is a machine with two single screws. There are a tremendous variety of twin-screw extruders, with differences in design, principle of operation, and field of applications.
 Twin-screw extrusion is a very flexible process. This flexibility is mainly due to a modular design of both the screw and the barrel (see figure 1-2-1).

 DESIGN OF MACHINE TOOL STRUCTURE AND ANALYSIS
 3.1 Introduction
 Beds, bases, columns and box type housings are called "structures" in machine tools. In machine tools, 70-90%

of the total weight of the machine is due to the weight of the structure [3]. In this chapter classification and functions of machine tool structure is described.
