Vector-Borne Diseases Romeike Limited
 Vector-borne infectious diseases, such as malaria, dengue fever,
 yellow fever, and plague, cause a significant fraction of the global
 infectious disease burden; indeed, nearly half of the world's
 population is infected with at least one type of vector-borne
 pathogen (CIESIN, 2007; WHO, 2004a). Vector-borne plant and
 animal diseases, including several newly recognized pathogens,
 reduce agricultural productivity and disrupt ecosystems
 throughout the world. These diseases profoundly restrict
 socioeconomic status and development in countries with the
 highest rates of infection, many of which are located in the
 tropics and subtropics. Although this workshop summary provides

an account of the individual presentations, it also reflects an
 important aspect of the Forum philosophy. The workshop
 functions as a dialogue among representatives from different
 sectors and allows them to present their beliefs about which
 areas may merit further attention. These proceedings summarize
 only the statements of participants in the workshop and are not
 intended to be an exhaustive exploration of the subject matter or
 a representation of consensus evaluation. Vector-Borne Diseases
 : Understanding the Environmental, Human Health, and
 Ecological Connections, Workshop Summary (Forum on Microbial
 Threats) summarizes this workshop.

The Shaping of the Social Science Disciplines Springer Science &
 Business Media

Since its creation in 1884, Engineering Index has covered
 virtually every major engineering innovation from around the
 world. It serves as the historical record of virtually every major
 engineering innovation of the 20th century. Recent content is a
 vital resource for current awareness, new production information,
 technological forecasting and competitive intelligence. The
 world's most comprehensive interdisciplinary engineering
 database, Engineering Index contains over 10.7 million records.
 Each year, over 500,000 new abstracts are added from over
 5,000 scholarly journals, trade magazines, and conference

proceedings. Coverage spans over 175 engineering disciplines from over 80 countries. Updated weekly.

Journal of the American Society of Mechanical Engineers Walter de Gruyter GmbH & Co KG

The Hellenistic city of New Halos, situated on the coastal route between North and Central Greece, existed for only a short period (ca 302-265 BC) before being destroyed by an earthquake and finally abandoned. The city's original ninety-thousand inhabitants lived in modest houses in the lower town, six of which have been excavated. This book presents the plans of these six houses, detailing the arrangement of living quarters, storage rooms and courtyards, as well as analyzing numerous artifacts, most of which were found in-situ. This volume contributes greatly to our knowledge of cities in Hellenistic Greece. The house plans and artifacts from the excavations (including agricultural equipment, animal remains, storage jars, kitchen ware, figurines, jewellery and coins) give a unique view of housing around 265 BC.

Self-Organizing Maps Cambridge University Press

This volume is devoted to models and methods in multiple objectives decision making. The importance of the multiple dimensions of decision making was first recognised during the 1960s and since then progress has been made in that theoretical or application oriented contributions may now be categorized under two main headings:- Multiattribute Decision Making (MADM) which concerns the sorting, the ranking or the evaluation of objects of choice according to several criteria and Multiobjective Decision Making (MODM) which deals with the vector optimization in mathematical programming. The above are also presented in the context of various applications, namely banking, environment, health, manpower, media, portfolio and traffic control, resulting in a book for a wide variety of readers.

Vectors, Ecological Impacts, Management and Predictions CRC Press

Covers translations of scientific and technical interest from non-Western languages into Western languages.

Chemical Age Vintage

Includes subject section, name section, and 1968-1970, technical reports.

Adjunct Proceedings of the XVIIth Congress of the International Association for the History of Religions, Mexico City, 1995 Elsevier

Mathematical preliminaries; Neural modeling; The basic SOM; Physiological interpretation of SOM; Variants of SOM; Learning vector quantization; Applications; Software tools for SOM; Hardware for SOM; An overview of SOM literature; Glossary of "neural" terms; References; Index.

National Union Catalog Springer Science & Business Media

When organisms are deliberately or accidentally introduced into a new ecosystem a biological invasion may take place. These so-called 'invasive species' may establish, spread and ecologically alter the invaded community. Biological invasions by animals, plants, pathogens or vectors are one of the greatest environmental and economic threats and, along with habitat destruction, a leading cause of global biodiversity loss. In this book, more than 50 worldwide invasion scientists cover our current understanding of biological invasions, its impacts, patterns and mechanisms in both aquatic and terrestrial systems.

A True Crime Story and the Birth of Forensic Science ASTM International

Examines the cities of Algeria and Tunisia under French colonial rule and those of the Ottoman Arab provinces, providing a nuanced look at cross-cultural exchanges.

Serials Catalog: Titles, O-Z; and Corporate body index National Academies Press

Now distributed by Thomson Gale, the Willings Press Guide has been the world's leading international media directory for 125 years. It provides extensive professionally researched coverage of the UK and international print media -- national and regional newspapers, magazines, periodicals and special interest titles.

NIST Serial Holdings, 1990 BRILL

The Compass began in a storefront theater near the U. of Chicago campus in the summer of 1955 and lasted only a few years before its players--including Paul Sills, Elaine May, Mike Nichols, Barbara Harris, Severn Darden, and Shelley Berman--moved on. Coleman recreates the time, the place, the personalities, and the neurotic magic whereby the Campus made theater history in America. Annotation copyrighted by Book News, Inc., Portland, OR.

Standardization of Fretting Fatigue Test Methods and Equipment University of Chicago Press

An Edgar Award nominee documents the killing spree of Joseph Vacher on the French countryside at the end of the 19th century, tracing the contributions of prosecutor Emile Fourquet and Dr. Alexandre Lacassagne to the science of forensics in their shared effort to capture and bring Vacher to justice. Reprint.

Série de mécanique appliquée WIT Press

This book, which represents probably the most comprehensive discussion of the emergence of modern social science yet produced, is of far more than merely historical interest. The contributors set out to rewrite the history of the social sciences and to show the limitations of conventional conceptions of their development. These tasks they accomplish with great success and much distinction. Yet in so doing they contribute in a direct way to our understanding of the relation between social analysis and the nature of human societies today. The brilliant and distinctive perspective of the papers in this collection is to demonstrate, with many specific examples, that social science and modern institutions have helped shape each other in mutual interplay. Modern systems are in some part constituted through the reflexive incorporation of developing social science knowledge; on the other hand, the social sciences organise themselves in terms of a continuing reflection upon the evolution of those systems. Such a perspective, as Wagner and Wittrock in particular make clear, does not in any way either impugn the status of knowledge claims made within social science or destroy the independent reality of social institutions. The book questions the notion that the institutionalising of the social sciences can be understood as a process of their increasing autonomy from external social connections. 'Autonomy' forms a mode of legitimation and a basis of power rather than a distinctive phenomenon as such.

Bulletin of the International Railway Congress Bulletin of the International Railway Congress Association [English Edition] Revue Roumaine Des Sciences Techniques Série de mécanique appliquée Technical Translations Willings Press Guide Includes entries for maps and atlases.

Willing's Press Guide

This volume is the adjunct proceedings on methodology from the XVIIth Congress of the International Association for the History of Religions, held in Mexico City in 1995. Taken together, the essays present a thorough and coherent perspective on studying religion as an item of human culture.

World Index of Scientific Translations and List of Translations Notified to ETC.

In an era where humans affect virtually all of the earth's processes, questions arise about whether we have sufficient knowledge of human-environment interactions. How can we sustain the Earth's ecosystems to prevent collapses and what roles should practitioners and scientists play in this process?

These are the issues central to the concept of environmental literacy. This unique book provides a comprehensive review and analysis of environmental literacy within the context of environmental science and sustainable development. Approaching the topic from multiple perspectives, it explores the development of human understanding of the environment and human-environment interactions in the fields of biology, psychology, sociology, economics and industrial ecology. The discussion emphasises the importance of knowledge integration and transdisciplinary processes as key strategies for understanding complex human-environment systems (HES). In addition, the author defines the HES framework as a template for investigating sustainably coupled human-environment systems in the 21st century.

Occupational Safety and Health

Containing papers presented at the Thirteenth International

Conference in this well established series on (CMEM) Computational Methods and Experimental Measurements. These proceedings review state-of-the-art developments on the interaction between numerical methods and experimental measurements. Featured topics include: Computational and Experimental Methods; Experimental and Computational Analysis; Computer Interaction and Control of Experiments; Direct, Indirect and In-Situ Measurements; Particle Methods; Structural and Stress Analysis; Structural Dynamics; Dynamics and Vibrations; Electrical and Electromagnetic Applications; Biomedical Applications; Heat Transfer; Thermal Processes; Fluid Flow; Data Acquisition; Remediation and Processing and Industrial Applications.
