Chemistry and technology of polyols for polyurethanes Ionescu , Mihail Polyurethanes are one of the most dynamic groups of polymers, they find use in nearly every aspect of modern life, in applications such as furniture, bedding, seating and instrument panels for cars, shoe soles, Chemistry And Technology Of Polyols For Polyurethane Chemistry And Technology Of Polyols For Polyurethane It covers the chemistry and technology of oligo-polyol fabrication, the characteristics of the various oligo-polyol families and the effects of the oligo-polyol structure on the properties of the resulting PU. It presents the details of oligo-polyol synthesis, and explains the chemical and physico-chemical subtleties of oligo-polyol fabrication. Ionescu M. Chemistry and Technology of Polyols for ... concerning the chemistry and technology of oligo-polyols used for polyurethanes, noting the many features they have in common. Chemistry and Technology of Polyols for Polyurethanes ... Overview. Acrylic polyols represent a special group of amorphous polyols, of molecular weight (MW) of 8000-13000 daltons, obtained by radical copolymerisation of acrylic monomers (ternary or quaternary copolymers), such as acrylic or methacrylic acids and esters. The source of hydroxyl groups in these acrylic polyols is the utilisation in the radical copolymerisation reaction of hydroxyalkyl acrylates or hydroxyalkyl methacrylates [1, 2] as comonomers. Chapter 10: Acrylic Polyols | Engineering360 This book considers the raw materials used to build the polyurethane polymeric architecture. It covers the chemistry and technology of oligo-polyol fabrication, the characteristics of the various oligo-polyol families and the effects of the oligo-polyol structure on the properties of the resulting polyurethane. Buy Chemistry and Technology of Polyols for Polyurethanes ... The hydroxyl groups of acrylic polyols are generated by using hydroxyalkyl acrylates or hydroxyalkyl methacrylates as comonomers, the hydroxyl groups being lateral substituents of the macromolecular chains and not terminal hydroxyl groups. One typical example of radical polymerisation with generation of terminal hydroxyl groups is the synthesis of hydroxy-telechelic polybutadiene. Chapter 9: Polybutadiene Polyols | Engineering360 It covers the chemistry and technology of oligo-polyol fabrication, the characteristics of the various oligo-polyol families and the effects of the oligo-polyol structure on the properties of the resulting PU. It presents the details of oligo-polyol synthesis, and explains the chemical and physico-chemical subtleties of oligo-polyol fabrication.
