It is generally accepted in legal and bioethical discourse that the patient has a right to self-determination. In practice though, this is often not the case. Paternalism is waning and it is increasingly recognised that there are values other than medical factors which determine the choices that patients make. Unfortunately, these developments have not resulted in huge

advances for patient self-determination, which is largely because the consent model has fundamental flaws that constrain its effectiveness. This book sets out to offer an alternative model to consent. In the property model proposed here, the patient's bodily integrity is protected from unauthorised invasion, and their legitimate expectation to be provided with the relevant information to make an informed decision is taken to be a proprietary right.

It is argued that the property model potentially overcomes the limitations of the consent model, including the obstacle caused by the requirement to prove causation in consent cases. The author proposes that this model could in the future provide an alternative or complementary approach for the courts to consider when dealing with cases relating to self-determination in health care.

This book critically analyzes the place of caesarean in childbearing at the beginning of the twenty first century. It questions the changes that are taking place in childbirth and, in particular, the effects and implications of an increase in caesarean births. This controversial work by a practising midwife and researcher, includes discussion of: the context of the operation and description of it health systems around the world and their

caesarean incidence rates decision-making and cultural/medical constraints the short and long term implications of caesarean for baby and mother. Using up-to-date research, Rosemary Mander bases her argument on a firm evidence-base and argues that the rapidly rising caesarean section rate may not be for the benefit of either the woman giving birth or her baby. Rather, the beneficiaries may actually be those professionals whose investment is in extending

the range of their influence and thus increasing the medicalization of normal life.

This book recounts the

journey of English midwives over six centuries and their battle for survival as a discrete profession, caring safely for childbearing women. With a particular focus on sixteenth and twentieth century midwifery practice, it includes new research which provides evidence of the identity, social status, lives, families and practice of contemporary midwives, and argues that the excellent care given by ecclesiastically licensed midwives in Tudor England was not bettered

until the twentieth century. Relying on a wide variety of archived and personally collected material, this history illuminates the lives, words, professional experiences and outcomes of midwives. It explores the place of women in society, the development of midwifery education and regulation, the seventeenth century arrival of the accoucheurs and the continuing drive by obstetricians to medicalise birth. A fascinating and compelling read, it

highlights the politics and challenges that have shaped midwifery practice today and encourages readers to be confident in midwifery-led care and giving women choices in childbirth. It is an important read for all those interested in childbirth.
