 This Handbook on Metalloproteins focuses on the available structural information of proteins and their metal ion coordination spheres. It centers on the metal ions indispensable for life but also considers metal ions used as substitution probes in studies of metalloproteins. Emphasizing the structure-function relationship, the book covers the common and distinct characteristics of metallo-enzymes, proteins, and amino acids bonded to copper, zinc, iron, and more.

Structural Integrity of Offshore Wind Turbines: Oversight of Design, Fabrication, and Installation Springer Nature

This book covers properties, processing, and applications of conducting polymers. It discusses properties and characterization, including photophysics and transport. It then moves to processing and morphology of conducting polymers, covering such topics as printing, thermal processing,

morphology evolution, conducting polymer composites, thin films

Deep Space Telecommunications Systems Engineering Springer Science & Business Media
 Optimization has long been a source of both inspiration and applications for geometers, and conversely, discrete and convex geometry have provided the foundations for many optimization techniques, leading to a rich interplay between these subjects. The purpose of the Workshop on Discrete Geometry, the Conference on Discrete Geometry and Optimization, and the Workshop on Optimization, held in September 2011 at the Fields Institute, Toronto, was to further stimulate the interaction between geometers and optimizers. This volume reflects the interplay between these areas. The inspiring Fejes Tóth Lecture Series, delivered by Thomas Hales of the University of Pittsburgh, exemplified this approach. While these fields have recently witnessed a lot of activity and successes, many questions remain open. For example, Fields medalist Stephen Smale stated that the question of the existence of a strongly polynomial time algorithm for linear optimization is one of the most important unsolved problems at the beginning of the 21st century. The broad range of topics covered in this volume demonstrates the many recent and fruitful connections

between different approaches, and features novel results and state-of-the-art surveys as well as open problems.

Proceedings of 4th ICMETE 2020 Walter de Gruyter GmbH & Co KG

This updated edition features three new chapters and current research findings. Topics include prenatal growth and functional development, motor development, thermoregulation, obesity in childhood and adolescence and more.

Space Shuttle Missions Summary (NASA/TM-2011-216142) Academic Conferences Limited

This book constitutes the refereed post-conference proceedings of the Fourth International Conference on Future Access Enablers for Ubiquitous and Intelligent Infrastructures, FABULOUS 2019, held in Sofia, Bulgaria, in March 2019. This year's conference topic covers Globalization through Advanced Digital Technologies - as the digitalization in all spheres of life has an impressive influence on communication and daily life in general. The 39 revised full papers were carefully reviewed and selected from 54 submissions. The main topics deal with: healthcare/wellness applications; IoT and sensor networks; IoT security in the digital

transformation era; wireless communications and networks; virtual engineering and simulations.
Offshore Blowouts: Causes and Control Transportation Research Board

This document provides guidance to States and operators for developing procedures and policies for dealing with dangerous goods incidents on board aircraft. It contains general information on the factors that may need to be considered when dealing with any dangerous goods incident and provides specific emergency response drill codes for each item listed in the Technical Instructions for the Safe Transport of Dangerous Goods by Air

Growth, Maturation, and Physical Activity Cambridge University Press

Wave breaking represents one of the most interesting and challenging problems for fluid mechanics and physical oceanography. Over the last 15 years our understanding has undergone a dramatic leap forward, and wave breaking has emerged as a process whose physics is clarified and quantified. Ocean wave breaking plays the primary role in the air-sea exchange of momentum, mass and heat, and it is of significant importance for ocean remote sensing, coastal and ocean engineering, navigation and other practical applications. This book outlines the state of the art in our understanding of wave breaking and presents the main outstanding problems. It is a valuable resource for anyone interested in this topic: researchers, modellers, forecasters, engineers and graduate students in physical oceanography, meteorology and ocean engineering.

Theory, Simulation and Practice Springer Science & Business Media

This book highlights recent research on bio-inspired computing and its various innovative applications in information and communication technologies. It presents 51 high-quality papers from the 11th International Conference on Innovations in Bio-Inspired Computing and Applications (IBICA 2020) and 10th World Congress on Information and Communication Technologies (WICT 2020), which was held online during December 16–18, 2019. As a premier conference, IBICA-WICT brings together researchers, engineers and practitioners whose work involves bio-inspired computing, computational intelligence and their applications in information security, real-world contexts, etc. Including contributions by authors from 25 countries, the book offers a valuable reference guide for all researchers, students and practitioners in the fields of Computer Science and Engineering.

Springer Handbook of Ocean Engineering Gulf Professional Publishing

This book presents the proceedings of the International Science and Technology Conference “FarEastCon 2019,” which took place on October 1–4, 2019, in Vladivostok, Russian Federation. The conference provided a platform for gathering expert opinions on projects and initiatives aimed at the implementation of far-sighted scientific research and development, and allowed current theoretical and practical advances to be shared with the broader research community. Featuring selected papers from the conference, this book will be of interest to experts in various fields whose work involves developing innovative solutions and increasing the efficiency of economic activities.

Proceedings of 3rd ICMETE 2019 CRC Press

TRB Special Report 305: Structural Integrity of Offshore Wind Turbines: Oversight of Design, Fabrication, and Installation explores the U.S. Department of the Interior’s Bureau of Ocean Energy Management, Regulation, and Enforcement (BOEMRE) approach to overseeing the development and safe operation of wind turbines on the outer continental shelf, with a focus on structural safety. The committee that developed the report recommended that in order to facilitate the orderly development of offshore wind energy and support the stable economic development of this nascent industry, the United States needs a set of clear requirements that can accommodate future design development. The report recommends that BOEMRE develop a set of requirements that establish goals and objectives with regard to structural integrity, environmental performance, and energy generation. The committee found that the risks to human life and the environment associated with offshore wind farms are substantially lower than for other industries such as offshore oil and gas, because offshore wind farms are primarily unmanned and contain minimal quantities of hazardous substances. This finding implies that an approach with significantly less regulatory oversight may be taken for offshore wind farms. Under this approach, industry would be responsible for proposing sets of standards, guidelines, and recommended practices that meet the performance requirements established by BOEMRE. The domestic industry can build on standards, guidelines, and practices developed in Europe, where the offshore wind energy is further developed, but will have to fill gaps such as the need to address wave and wind loadings encountered in hurricanes. The report also includes findings and recommendations about the role

that certified verification agents (third party evaluators) can play in reviewing packages of standards and project-specific proposals.

Rolling of Advanced High Strength Steels CRC Press

The global population is expected to rise to 9.8 billion by the year 2050 - with everyone ultimately striving for prosperity. New methods must therefore be found to achieve more efficient production. Research to date shows that the biological inventory that has evolved: its products, processes, principles and tools, can spur modern technology. The development of technological innovations based on biological concepts, with the goal of particularly innovative and sustainable value creation, today is collectively known as "biological transformation". It results in highly functional products with striking properties that can be both manufactured and utilized in a resource-saving way. In terms of taking responsibility of the good of all people, biological transformation is therefore a path that applied research will have to take. The Fraunhofer-Gesellschaft has recognized the developmental technology potential of biological transformation and sees it as its task not only to drive the relevant research forward, but also to promote public awareness of the topic.

Emergency response guidance for aircraft incidents involving dangerous goods Cambridge University Press

This new primer offers a succinct, single-volume introduction to biblical Greek that has already been tested in classrooms around the country. Divided into 32 separate lessons, each containing a generous number of exercises, the text leads students from the Greek alphabet to a working understanding of the language of the Bible.

Lucretius Poet and Philosopher Elsevier

The lack of balance and the failure of regulation in life has traditionally been recognized in such extreme symbolic acts as overconscientiousness or a criminal lack of conscience. This volume shows how the neurotic process affects biologic functions, distorting natural functioning. Three distinct functions and their respective extremes are discussed: eating (obesity, bulimia nervosa), sleeping (insomnia, excessive somnolence), and sex (hypersexuality including child molestation, hyposexuality including inhibited sexual desires).

Advanced Ocean Modelling National Academies Press

The possibility of nondestructively characterizing the microstructure, morphology or mechanical properties of materials is certainly a fascinating subject. In principle, such techniques can be used at all stages of a material's life - from the early stages of processing, to the end of a structural component's useful life. Interest in the subject thus arises not only from a purely scientific point of view but is also strongly motivated by economic pressures to improve productivity and quality in manufacturing, to insure the reliability and extend the life of existing structures. The present volume represents the edited papers presented at the Second International Symposium on the Nondestructive Characterization of Materials, held in Montreal, Canada, July 21-23, 1986. The Proceedings are divided into eight sections, which reflect the multidisciplinary nature of characterizing materials nondestructively: Polymers and Composites, Ceramics and Powder Metallurgy, Metals, Layered Structures/Adhesive Bonds/Welding, Degradation/Aging, Texture/Anisotropy, Stress, and New Techniques. Invited papers by R. Hadcock of Grumman Aircraft Systems, R. Cannon of Rutgers University, H. Yada of Nippon Steel and R. Bridenbaugh of Alcoa review respectively the processing of polymer matrix composites, ceramics, steel and aluminum, emphasizing the need for material property sensors to improve process and quality control. Two other invited papers, one by A. Wedgwood of Harwell and the other by P. Holler of the IzFP in Saarbrücken review state of the art techniques to characterize particulate matter and metals respectively.

Engineering Dynamics and Vibrations www.Militarybookshop.CompanyUK

This book presents selected papers from the 4th International Conference on Micro-Electronics and Telecommunication Engineering, held at SRM Institute of Science and Technology, Ghaziabad, India, during 26–27 September 2020. It covers a wide variety of topics in micro-electronics and telecommunication engineering, including micro-electronic engineering, computational remote sensing, computer science and intelligent systems, signal and image processing, and information and communication technology.

Local Flaps in Facial Reconstruction brings you the detailed visual guidance and unmatched expertise you need to achieve the best results for the full range of facial flap procedures. Full-color clinical photographs and line drawings—along with high-quality surgical video clips—capture the latest facial reconstruction practices and effective methods like reconstruction of skin defects on the head and neck following tumor removal or trauma. Perspectives from facial plastic surgeons, dermatologists, ophthalmologists, and otolaryngologists help you take all of these considerations into account in treatment planning. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. Make the most effective clinical decisions with a better understanding of the anatomy, physiology, and biomechanics of the skin Understand skin flap anatomy and physiology—vital to the performance of successful local flap reconstruction for facial defects. Implement the latest techniques with updated coverage of new wound closure techniques and materials (including glues and adhesives), scar revision, complications, and vascular abnormalities. Watch clips of key surgical procedures, including reconstructive surgery of the nose and lip. Avoid pitfalls and achieve the best outcomes thanks to a step-by-step approach to each procedure, complete with tips and tricks of the trade from leading experts. Minimize flap ischemia and other complications with proper preoperative planning and surgical techniques. Visualize what to look for and how to proceed with high-quality illustrations of rotation flaps, transposition flaps, advancement flaps, bilobe flaps, melolabial flaps, paramedian forehead flaps, and rhombic flaps. Access video clips at Expert Consult.

Oversight of Design, Fabrication, and Installation - Special Report 305 Springer Nature

Six hundred years after Poggio’s retrieval of the De rerum natura, and with the recent surge of interest in Lucretius and his influence, there has never been a better time to fully assess and recognize the shaping force of his thought and poetry over European culture from antiquity to modern times. This volume offers a multidisciplinary and updated overview of Lucretius as philosopher and as poet, with special attention to how these two aspects interact. The volume includes 18 contributions by established as well as early career scholars working on Lucretius’ philosophical and poetic work, and his reception both in ancient and early modern times. All the chapters present new and original research. Section I explores core issues of Epicurean-Lucretian epistemology and ethics. Section II expounds much new material on ancient response to and reception of Lucretius. Section III presents new material and analysis on the immediate, fraught early modern reception of the poem. Section IV offers a wide collection of new and original papers on Lucretius’ fortunes in the period from Machiavelli up to Victorian times. Section V explores little known aspects of the iconographical and biographical motifs related to the De rerum natura.

Expert Consult Springer Nature

The mooring system is a vital component of various floating facilities in the oil, gas, and renewables industries. However, there is a lack of comprehensive technical books dedicated to the subject. Mooring System Engineering for Offshore Structures is the first book delivering in-depth knowledge on all aspects of mooring systems, from design and analysis to installation, operation, maintenance and integrity management. The book gives beginners a solid look at the fundamentals involved during mooring designs with coverage on current standards and codes, mooring analysis and theories behind the analysis techniques. Advanced engineers can stay up-to-date through operation, integrity management, and practical examples provided. This book is recommended for students majoring in naval architecture, marine or ocean engineering, and allied disciplines in civil or mechanical engineering. Engineers and researchers in the offshore industry will benefit from the knowledge presented to understand the various types of mooring systems, their design, analysis, and operations. Understand the various types of mooring systems and the theories behind mooring analysis Gain practical experience and lessons learned from worldwide case studies Combine engineering fundamentals with practical applications to solve today’s offshore challenges
