This book highlights cutting-edge research in the field of network

science, offering scientists, researchers, students, and practitioners a unique update on the latest advances in theory and a multitude of applications. It presents the peer-reviewed proceedings of the X International Conference on Complex Networks and their Applications (COMPLEX NETWORKS 2021). The carefully selected papers cover a wide range of theoretical topics such as network models and measures; community structure, network dynamics; diffusion, epidemics and spreading

processes; resilience and control as well as all the main network applications, including social and political networks; networks in finance and economics; biological and neuroscience networks, and technological networks.

America's Other Automakers Routledge

This book provides a comprehensive history of American print automobile advertising over a half-century span, beginning with the entrenchment of the "Big Three" automakers during the Depression and concluding with the fuel crises of the 1970s and early 1980s. Advances in general advertising layouts and graphics are discussed in Part One, together with the ways in which styling, mechanical improvements, and convenience features were highlighted. Part Two explores ads that were concerned less with the attributes of the cars themselves than with shaping the way consumers would perceive and identify with them. Part Three addresses ads oriented toward the practical aspects of automobile ownership, concluding with an account of how advertising responded to the advance of imported cars after World War II. Illustrations include more than 250 automobile advertisements, the majority of which have not been seen in print since their original publication.

"PTCJ shines on empirical detail and an illuminating account of how policy transfer works in criminal justice. ...highly recommended for readers interested in understanding the

current state of criminal justice policy." *Political Studies Review*
"A very interesting book and excellent at setting the context of criminal justice policies in the UK. Thoroughly researched and written in an engaging style." Tina Eadie, Senior Lecturer, De Montfort University
Since the late 1980s, it seems that policy-makers and politicians in the UK have increasingly looked West across the Atlantic for inspiration in the field of crime control. More broadly, recent years have seen a growing focus upon the extent to which, and ways in which, policy ideas and practices travel within and across national boundaries. Scholars from a number of disciplines have become increasingly interested in the concepts of 'policy transfer' and related ideas. This book contains the first major empirical study of policy transfer in the field of criminal justice and crime control. It focuses upon policy transfer from the USA to the UK, and undertakes a detailed examination of the processes of policy change in three key areas that have been widely perceived as imports from the USA: the privatization of corrections, 'two' and 'three strikes' sentencing, and 'zero tolerance' policing. Drawing upon a wealth of documentary evidence and interviews with leading politicians, policy makers and other key players in policy developments, the authors explore the complex processes involved in policy transfer and analyse the nature and degree of US influence in these areas.

In 2016, it was 60 years since the eminent Soviet researcher, a disciple and a successor of Ivan Pavlov, Leon Orbeli had proclaimed the birth of a new branch of physiology, evolutionary physiology. In the same year, his ideas were embodied in the foundation in Leningrad, now Saint Petersburg, of the present

Sechenov Institute of Evolutionary Physiology and Biochemistry of the Russian Academy of Sciences. This anniversary book includes the selected works carried out recently by his followers at the same institute. While addressing some hot aspects of evolutionary physiology and biochemistry, they demonstrate that this branch of physiology really represents a discipline in its own right.

Background modeling and foreground detection are important steps in video processing used to detect robustly moving objects in challenging environments. This requires effective methods for dealing with dynamic backgrounds and illumination changes as well as algorithms that must meet real-time and low memory requirements. Incorporating both established and new ideas, *Background Modeling and Foreground Detection for Video Surveillance* provides a complete overview of the concepts, algorithms, and applications related to background modeling and foreground detection. Leaders in the field address a wide range of challenges, including camera jitter and background subtraction. The book presents the top methods and algorithms for detecting moving objects in video surveillance. It covers statistical models, clustering models, neural networks, and fuzzy models. It also addresses sensors, hardware, and implementation issues and discusses the resources and datasets required for evaluating and comparing background subtraction algorithms. The datasets and codes used in the text, along with links to software demonstrations, are available on the book's website. A one-stop resource on up-to-date models, algorithms, implementations, and benchmarking techniques, this book helps

researchers and industry developers understand how to apply background models and foreground detection methods to video surveillance and related areas, such as optical motion capture, multimedia applications, teleconferencing, video editing, and human-computer interfaces. It can also be used in graduate courses on computer vision, image processing, real-time architecture, machine learning, or data mining.

For more than 50 years, Dubois' *Lupus Erythematosus and Related Syndromes* has been recognized internationally as the go-to clinical reference on lupus and other connective tissue diseases. From basic scientific principles to practical points of clinical management, the updated 9th Edition provides extensive, authoritative coverage of systemic lupus erythematosus (SLE) and its related diseases in a logical, clearly written, user-friendly manner. It's an ideal resource for rheumatologists and internal medicine practitioners who need a comprehensive clinical reference on all aspects of SLE, connective tissue diseases, and the antiphospholipid syndromes. Provides complete clinical coverage of every aspect of cutaneous and systemic lupus erythematosus, including definitions, pathogenesis, autoantibodies, clinical and laboratory features, management, prognosis, and patient education. Contains an up-to-date overview of significant advances in cellular, molecular, and genetic technologies, including genetic advancements in identifying at-risk patients. Offers an increased focus on the clinical management of related disorders such as Sjogren's syndrome, scleroderma, polymyositis, and antiphospholipid syndrome (APS). Presents the knowledge and expertise of more

international contributors to provide new global perspectives on manifestations, diagnosis, and treatment. Features a vibrant, full-color format, with graphs, algorithms, differential diagnosis comparisons, and more schematic diagrams throughout.

Driving Identities examines long-standing connections between popular music and the automotive industry and how this relationship has helped to construct and reflect various socio-cultural identities. It also challenges common assumptions regarding the divergences between industry and art, and reveals how music and sound are used to suture the putative divide between human and non-human. This book is a ground-breaking inquiry into the relationship between popular music and automobiles, and into the mutual aesthetic and stylistic influences that have historically left their mark on both industries. Shaped by new historicism and cultural criticism, and by methodologies adapted from gender, LGBTQ+, and African-American studies, it makes an important contribution to understanding the complex and interconnected nature of identity and cultural formation. In its interdisciplinary approach, melding aspects of ethnomusicology, sociology, sound studies, and business studies, it pushes musicological scholarship into a new consideration and awareness of the complexity of identity construction and of influences that inform our musical culture. The volume also provides analyses of the confluences and coactions of popular music and automotive products to highlight the mutual influences on their respective aesthetic and technical evolutions. Driving Identities is aimed at both academics and

enthusiasts of automotive culture, popular music, and cultural studies in general. It is accompanied by an extensive online database appendix of car-themed pop recordings and sheet music, searchable by year, artist, and title.

Drive into the 21st century in an electric car With falling cost of ownership, expanded incentives for purchasing, and more model and body type options than ever, it may finally be time to retire the old gas-guzzler and dive into the world of electric car ownership. Electric Cars For Dummies is your guide to becoming lightning powered, reducing your carbon footprint, and saving money on gas while you do it. This book teaches you how to select the battery-charged vehicle that fits your need and budget. It also offers insight into how to maintain your electric car, including answering all your questions about charging your vehicle. Calculate the total cost of ownership, prep your home to become one huge charger, and demystify the battery, the tune-ups and more. Learn the difference in cost of ownership and emissions between electric and gas-powered vehicles Explore your options and find an electric car that fits in your budget Know when and how to charge your vehicle, and what kind of maintenance it needs Figure out how to charge your car on the go This is the perfect book for new and would-be electric car owners looking for guidance on buying and maintaining one of these super sleek machines.

For the first time, this book unites the theory, experimental techniques and computational tools used to describe the diffusion of atoms, molecules and nanoparticles across metal surfaces.

Starting with an outline of the formalism that describes diffusion on surfaces, the authors guide the reader through the principles of atomic movement, before moving on to diffusion under special circumstances, such as the presence of defects or foreign species. With an initial focus on the behaviour of single entities on a surface, later chapters address the movement of clusters of atoms and the interactions between atoms. While there is a special emphasis on experimental work, attention is paid to the increasingly valuable contributions theoretical work has made in this field. This book has wide interdisciplinary appeal and is ideal for researchers in solid state physics, chemistry as well as materials science, and engineering.

International and Comparative Human Resource Management offers students a clear and contemporary introduction to issues in managing the human aspects of international organisations.

International Human Resource Management (IHRM) has grown in significance as a field of study over the past decade, due to the internationalisation of business, freedom of movement of labour and capital, and international regulation of employment matters. This new book takes a fresh and distinctive approach, combining analysis of international HR policy and practice with detailed exposition of contexts and systems of HR in a selection of developed and developing countries.

"The Hollywood Curriculum is a sophisticated and thoughtful look at the portrayal of teachers in film and television in an exceptionally accessible way. Dalton draws on some of the most relevant and exciting theory to evaluate teacher films and

demonstrates a masterful insight into the worlds of education and film studies. This book is a must-read for those interested in exploring the intersection of teaching, curriculum, film/television, and society, and is an outstanding contribution to the literature."- Alan S. What are the risks of terrorism and what are their consequences and economic impacts? Are we safer from terrorism today than before 9/11? Does the government spend our homeland security funds well? These questions motivated a twelve-year research program of the National Center for Risk and Economic Analysis of Terrorism Events (CREATE) at the University of Southern California, funded by the Department of Homeland Security. This book showcases some of the most important results of this research and offers key insights on how to address the most important security problems of our time. Written for homeland security researchers and practitioners, this book covers a wide range of methodologies and real-world examples of how to reduce terrorism risks, increase the efficient use of homeland security resources, and thereby make better decisions overall.

'Frank Lloyd wright in New York: The Plaza Years, 1954-1959', examines the momentous five-year period when one of the world's greatest architects and one of the world's greatest cities coexisted. Authors Jane Hession and Debra Prickel bring each of these unequalled characters to life, exploring the fascinating contradiction between Wright's often-voiced disdain of New York and his pride and pleasure of living in one of the city's greatest landmarks: the Plaza Hotel. From his suite, or 'Taliesin the Third', as it became known, Wright supervised construction of the Guggenheim, sparred with the New York press, and received many famous visitors such as Marilyn Monroe and Arthur Miller. home...;Michael Carroll, a renowned astronomical and paleo artist for more than twenty years, has done work for NASA and the Jet Propulsion Laboratory. Basic Engineering Circuit Analysis has long been regarded as the most dependable textbook for computer and electrical engineering majors. In this new edition, Irwin and Nelms continue to develop the most complete set of pedagogical tools available and provide the highest level of support for students entering into this complex subject. Irwin and Nelms trademark student-centered learning design focuses on helping students complete the connection between theory and practice. Key concepts are explained clearly and illustrated by detailed, worked examples.

These are then followed by Learning Assessments, which allow students to work similar problems and check their results against the answers provided.

This book constitutes the refereed proceedings of the 40th International Conference on Conceptual Modeling, ER 2021, which will be held as virtual event, in October 2021. The 14 full and 18 short papers were carefully reviewed and selected from 85 submissions. The conference presents topics on conceptual modeling, its foundations and applications. Celebrating its 40th anniversary this year, the overall theme of ER 2021 is: Conceptual Modeling in an Age of Uncertainty.

Humanizing LIS Education and Practice: Diversity by Design demonstrates that diversity concerns are relevant to all and need to be approached in a systematic way. Developing the Diversity by Design concept articulated by Dali and Caidi in 2017, the book promotes the notion of the diversity mindset. Grouped into three parts, the chapters within this volume have been written by an international team of seasoned academics and practitioners who make diversity integral to their professional and scholarly activities. Building on the Diversity by Design approach, the book presents case studies with practice models for two primary audiences: LIS educators and LIS practitioners. Chapters cover a range of issues, including, but not limited to, academic promotion and tenure; the decolonization of LIS education; engaging Indigenous and multicultural communities; librarians' professional development in diversity and social justice; and the decolonization of library access practices and policies. As a

collection, the book illustrates a systems-thinking approach to fostering diversity and inclusion in LIS, integrating it by design into the LIS curriculum and professional practice. Calling on individuals, organizations, policymakers, and LIS educators to make diversity integral to their daily activities and curriculum, *Humanizing LIS Education and Practice: Diversity by Design* will be of interest to anyone engaged in research and professional practice in Library and Information Science.

Transformative Classroom Management The natural condition of any classroom is harmonious, satisfying, and productive, so why do so many teachers struggle with problems of apathy, hostility, anxiety, inefficiency, and resistance? In this groundbreaking book, education expert John Shindler presents a powerful model, *Transformative Classroom Management (TCM)*, that can be implemented by any teacher to restore the natural positive feelings in his or her classroom—the love of learning, collaboration, inspiration, and giving—and create a productive learning environment in which all students can achieve. Unlike other classroom management systems that view problems as something to be "handled," TCM offers suggestions for creating optimal conditions for learning, performance, motivation, and growth. This practical book shows teachers how to abandon ineffective short-term gimmicks, bribes, and punishments and adopt the proven management practices and new habits of mind

that will transform their classrooms. Praise for *Transformative Classroom Management* "Transformative Classroom Management is a practical resource that explains the how and why of classroom management for novice and veteran teachers. Dr. Shindler recognizes the importance of preserving the teacher's sanity while ensuring the student's development of a personal sense of responsibility and a positive self-esteem." —EILEEN MATUS, principal, South Toms River Elementary School, New Jersey "I have read many other management books by other authors, but *Transformative Classroom Management* has been the best so far at demystifying the invisible forces in the classroom." —WILL McELROY, 4th grade teacher, Los Angeles United School District "This book was an invaluable tool for me during my student teaching. It served as a reference book that I found myself continually drawn to while struggling to find ways to effectively manage 29 first graders. The ideas, concepts and suggestions in the book were so innovative and helpful that even my Master Teacher found herself implementing some of the ideas! A must have for all student teachers!" —CAROL GILLON, student teacher, Seattle University "Insightful and thoroughly researched, *Transformative Classroom Management* is an invaluable tool to help teachers, newbies and veterans alike, develop fully functional and engaged learning communities." —LISA GAMACHE RODRIGUEZ, teacher, Los Angeles Unified School District
