This optimistic guide to Ireland at 100 tells our national story through facts and stats, placing Ireland under the microscope to chart 100 achievements of the past 100 years. Ireland remained one of the most poverty-stricken nations in Europe for decades after the State was formed. Yet now, it has the second-highest standard of living in the world. Author Mark Henry has gathered the data to tell an under-told story of our national progress across every aspect of Irish life. He identifies the factors that account for Ireland's extraordinary success, as well as the five most prominent psychological biases that prevent us from recognising how far we have come. He also highlights the greatest challenges that we must now address if we are to continue to progress in the century ahead. While there is still more to be done, In Fact illustrates that Ireland, for all its imperfections, is in a much better state than you might think.

In August, 1976 the research seminar 'Decision-making in business' was organized at Nijenrode, The Netherlands School of Business. More than fifty scientists and practitioners from nine countries presented research papers in one of the six discussion groups. Some of them also presented some of their ideas in front of a large mixed audience at a one-day symposium. Many of the papers presented at Nijenrode were of such a high quality that the decision to publish a selection of them was an easy one. At the same time the new series Nijenrode studies in business was initiated. All who were involved, the policy committee of the Nijenrode studies, the advisory and editorial board of the series, the publisher, and the organizing committee of the seminar and symposium, acclaimed the idea of publishing three volumes in the new series. A collection of eleven papers could be grouped under the title Trends in managerial and financial accounting. Another collection will be published as volume 2 of this series under the title Trends in

financial decision-making, while volume 3 will consist of papers exploring the theme Trends in business ethics. The books are intended for those who are interested in new developments in the decision-making area. They are especially suitable for graduate or advanced undergraduate courses: volume 1 in managerial or financial accounting courses; volume 2 in courses on managerial finance, capital budgeting or decision making; and volume 3 in courses on business ethics or related fields.

This book analyzes the relationship between integrated reporting and audit quality within the European context, presenting empirical evidence and drawing on a broad review of the available literature in order to evaluate the ability of integrated reporting to enhance audit risk assessment.

Dedicated sections first elucidate the concepts of integrated reporting and audit quality. The main integrated reporting frameworks are compared, the role of integrated reporting within a firm's disclosure is examined, and all aspects of audit risk are discussed. The key question of the impacts of integrated reporting on the components of audit risk is then addressed in detail, with reference to empirical findings, their practical implications, and their limitations. The concluding section explores the future of corporate reporting and the development of the next integrated reporting framework and summarizes the insights that the analysis in the book offers into the relationship between integrated reporting and audit quality in the European setting.

back to industrialisation. With the help of computerised information systems, the speed and detail with which a manager could get a hold of important information has increased. Today, it has become even more important to be able to choose what information to work with and that the context in which it should be used is understood. Organisational sense-making is in many ways an interesting and important path to take in order to do this. When working with the management control function, it is important to understand the organisation where the work is undertaken. One important part of the function is planning and another is control. Both are needed in order for the management control function to work. Performance is often a key ingredient when trying to find out what is working in a plan and what is not and here the understanding for information becomes necessary. Since the work is done within an organisation, both by managers and employees, it is also crucial to find ways to work with not only models, methods and techniques but also people and social dimensions. Key Features Managers and employees want to act in a meaningful way in general. The way planning and control is undertaken in an organization is to a large extent dependent on the way a manager interprets information about the organisation. Decisions and actions can be traced to the interpretation of a situation in the past and present. Since organisations are built on people, it is important to try to understand why they act in a certain way and how their understanding of the organisation is evolving. Management control has in many ways been described as a function that is dependent on different techniques and methods; however, it can also be described as a social process, focusing on decisions and actions. Information systems have come to play a crucial role in managing an organisation, especially when it comes to tracing performance. The demand for responsible and accountable management has led to an increased emphasis on meaningful decisions and actions. The Author Dr Krister Bredmar is associate professor at Linneaus University in Sweden. He has for more than 20 years worked with management control and organisational sense-making, both in theory and in practice. His research has been published both in academic journals and in books. Readership Scholars, students and practitioners. Contents The accounting heritage Corporate epistemology Thinking ahead The essence of management control Understanding performance The control concept in management control Reports, communication and stakeholders The essence of sense-making Organisations as a set of social relations Information systems and management control Individuals and organisations Organisational structure A social perspective A decisions context Techiques and functions Thinking and acting strategically Accounting tools Information and knowledge The performance paradox

The aim of the book is to give non-accounting students a basic ability and confidence to read and use financial accounting reports and statements within their business or financial specialties. Many employees in business today are expected to be conversant with reported accounting information as part of their regular job responsibilities. However, they often have little formal training in using such information. For example, in most Western countries, corporate directors and senior executives are legally responsible for the content and quality of publicly reported accounting statements, yet typically have no accounting background or experience to help in the discharge of these responsibilities. The theme of the book is financial reporting as an essential and significant part of corporate governance. There is continuous pressure on companies from government and stakeholder groups to improve their governance and accountability structures and procedures. This book reveals how financial statements and related disclosures assist in good governance and accountability by providing relevant and reliable accounting signals of managerial performance.

Dynamic economics, technological changes, increasing pressure from competition and customers to improve manufacturing and services are some of the major challenges to enterprises these days. New ways of improving organizational activities and management processes have to be created, in order to allow enterprises to manage the seemingly intensifying competitive markets successfully. Enterprises apply business optimizing solutions to meet new challenges and conditions. But also ensuring effective development for long-term competitiveness in a global environment. This is necessary for the application of qualitative changes in the industrial policy. "New Trends in Process Control and Production Management" (MTS 2017) is the collection of research papers from authors from seven countries around the world. They present case studies and empirical research which illustrates the progressive trends in business process management and the drive to achieve enterprise development and sustainability.
