Innovating with Infrastructure India's Quest for Energy Through Oil and Natural Gas
 Throughout the 1990s, major banking and currency crises occurred in many countries around the world. This book contains papers and comments from a conference held to identify and discuss the lessons to be learned from these crises, such as their causes and how to prevent their reoccurrence.

 Economic development transforms a traditional dual-system society into a productive framework in which everyone contributes and from which receives benefits accordingly. Economic development occurs when all segments of the society benefit from the fruits of economic growth through economic efficiency and equity. Economic efficiency will be present with minimum negative externalities to society, including agency, transaction, secondary and opportunity costs. An economic development plan is a carefully built framework that's long-term in scope. It's used to help communities across diverse situations. When planning for economic development, the goal is to create and maintain a strong, vibrant local economy. Local government economic development planning is part of a region's overall economic development strategy and involves intergovernmental coordination. The economic development plan provides a comprehensive overview of the economy, sets policy direction for economic growth, and

identifies strategies, programs, and projects to improve the economy. Economic planning, the process by which key economic decisions are made or influenced by central governments. It contrasts with the laissez-faire approach that, in its purest form, eschews any attempt to guide the economy, relying instead on market forces to determine the speed, direction, and nature of economic evolution. Finally, the author reminisces on the excitement that was aroused during the initial period of development planning as well as decline in the expectations from the planning process and its importance. This book imparts the basic information about the economic development and planning of the world.

This book is a practical guide to finding and delivering energy savings opportunities in transport operations for professional energy managers and energy auditors. Globally, transport is one of the fastest growing energy consumers and emitters of greenhouse gases, predominantly CO₂. The transport sector is also changing quickly ("more change in the last 5 years than in the last 50" – Mary Barra, CEO General Motors). After distance, unladen vehicle weight is the biggest driver of energy consumption in transport, hence this book is called the 'light' guide – tongue in cheek. Be warned transport is a huge and complex topic. This practical guide from the convener of EN16247-4:2014, the first European energy audit standard for transport, takes a pragmatic approach to delivering measurable energy and emissions reductions in transport operations. Lessons learnt from the author's 17 years of experience in persuading operators to deliver measured energy savings in transport are interwoven with tools, tips and shortcuts. These will help energy managers and auditors deliver effective transport energy audits that identify opportunities, prompting action, measured savings and, most importantly, being invited back!

What gives crime fiction its distinctive shape and form? What makes it such a compelling vehicle of social and political critique? Unwilling Executioner argues that the answer lies in the emerging genre's complex and intimate relationship with the bureaucratic state and modern capitalism, and the contradictions that ensue once the state assumes control of the criminal justice system. This study offers a dramatic new interpretation of the genre's emergence and evolution over a three hundred year period and as a genuinely transnational phenomenon. From its roots in the tales of criminality circulated widely in Paris and London in the early eighteenth century, this book examines the extraordinary richness, diversity and complexity of the genre's subsequent thematizations of crime and policing—moving from France and Britain and from continental Europe and the United States to other parts of the globe. In doing so it offers new ways of reading established crime novelists like Gaboriau, Doyle, Hammett, and Simenon, beyond their national contexts and an impulse to characterize their work as either straightforwardly 'radical' or 'conservative'. It also argues for the centrality of writers like Defoe, Gay, Godwin, Vidocq, Morrison, and more recently Manchette, Himes, and Sjöwall and Wahlöö to a project where crime and policing are rooted, and shown to be rooted, in the social and economic conditions of their time. These are all deeply political writers even if their novels exhibit no interest in directly promoting political causes or parties. The result is an agile, layered, and far-reaching account of the crime story's ambivalent relationship to the justice system and its move to complicate our understanding of what crime is and how society is policed and for whose benefit.

The "Golden Land", officially known as the Republic of the Union of Myanmar and formerly as Burma, has undergone dramatic reforms in recent years under the administration of President U Thein Sein. The rapid transition from a military junta to an open economy has surprised the global community and will see Myanmar assume the ASEAN chair for the first time in 2014. Known as the 'last frontier market' Myanmar is rich in natural resources and has an established extractive industries sector, with one of the world's oldest continuously producing oil fields. The country also enjoys significant mineral resources which remain greatly under explored by international mining firms - something the government is proactively trying to change. The easing of economic sanctions has accelerated the nation's economic growth, but Myanmar still faces political challenges, including ongoing ethnic conflict and religious tensions. However, with greater access to international markets and a growing number of business opportunities, investors are cautiously optimistic about the country's future.

Firm-to-firm relationships, along with the overall structure of industry, have changed markedly over the past decades. Replacing the model of vertical integration with one of global business, firms have started to outsource more by using a wider global network. At the same time, they have begun to increase their control and coordination along the value chain to remain competitive, blurring the boundaries between companies. Understanding the nature of the firm and its role in coordinating the supply chain will help firms to better define global competitive strategies.. The challenges that lie ahead for global business render obsolete the traditional model of procuring each service without long-term supply chain management. Current trends suggest that in the future there will be even deeper supply chain integration in most industries. The Nature of the Firm in the Oil Industry aims to facilitate the understanding of 'the firm' via the analysis of the specific relationship between international oil companies, which are among the world's biggest firms and which act as 'core system integrators', and the oil services companies, which help to find, extract, produce and distribute oil along the petroleum industry supply chain. This relationship serves as an example of deep integration by core system integrators and provides insights into the change in the nature of the firm in the era of modern globalization. Aimed at researchers and academics, The Nature of the Firm in the Oil Industry offers a thorough examination of this relationship in an effort to shed light on the nature of the firm, both in the oil industry and in global business today. It is a humble attempt to better understand the firm in a crucial industry.

The volume scrutinizes the fundamentally uneven character of industrial production and working class formation by bringing together anthropologists specializing on industrial labour in various locations from South America, Western and Eastern Europe, North Africa, and South Asia. Through their engagement with Leon Trotsky's concept of 'uneven and combined development' the authors unravel the complex relations that connect (and disconnect) labour in their sites of research with workers in other places and other times. As the contributions likewise reveal, the unevenness and combination inherent in industrial developments shape and are at the same time also shaped by the different politics workers in an unequal world pursue, as well as the historical experiences and future expectations of workers that inform these. With the attention the authors pay to the specificities of ethnographic detail as well as to broader regional and global developments the volume demonstrates the value of long-term ethnographic research and is of interest to a wide audience ranging from specialists in the fields of anthropology, history, sociology and development

studies to students and activists.

How do industrial firms in developing countries contend with and survive acute shortages of physical infrastructure? Gulyani examines the impact of inadequate power and freight transportation on the costs and competitiveness of Indian automobile firms and the innovative coping strategies that firms devise. Using in-depth firm-level surveys and supply-chain analysis, this study provides a unique perspective into the infrastructure problem and possible solutions. It identifies unconventional approaches and solutions that firms and governments can use to improve industrial access to infrastructure.

Why does corporate governance—front page news with the collapse of Enron, WorldCom, and Parmalat—vary so dramatically around the world? This book explains how politics shapes corporate governance—how managers, shareholders, and workers jockey for advantage in setting the rules by which companies are run, and for whom they are run. It combines a clear theoretical model on this political interaction, with statistical evidence from thirty-nine countries of Europe, Asia, Africa, and North and South America and detailed narratives of country cases. This book differs sharply from most treatments by explaining differences in minority shareholder protections and ownership concentration among countries in terms of the interaction of economic preferences and political institutions. It explores in particular the crucial role of pension plans and financial intermediaries in shaping political preferences for different rules of corporate governance. The countries examined sort into two distinct groups: diffuse shareholding by external investors who pick a board that monitors the managers, and concentrated blockholding by insiders who monitor managers directly.

Examining the political coalitions that form among or across management, owners, and workers, the authors find that certain coalitions encourage policies that promote diffuse shareholding, while other coalitions yield blockholding-oriented policies. Political institutions influence the probability of one coalition defeating another.

The maritime sector is dynamic and volatile, creating the need for continuous monitoring of the latest developments and their effects on the organisation, management and strategies of shipping companies. This book analyses the business environment of these companies and the approaches they adopt in organising and managing their activities. Management of Shipping Companies aims to facilitate the learning and understanding of the fascinating world of shipping business. It examines the organisation and management of companies which manage ocean-going ships, emphasising the special characteristics of the industry and the framework created by these. This textbook offers a detailed account of the companies' processes and functions, the structural and contextual dimensions of their organisation, as well as an analysis of human resources, safety management and the outsourcing of shipping operations. Written in an easily digestible and critical manner, it includes case studies and analysis of best practices implemented by companies worldwide. This unique and accessible book is an ideal text for students in maritime studies programs as well as readers interested in learning about maritime businesses' organisation and management.

Written in nontechnical terms, *Big Business and the Wealth of Nations* explains how the dynamics of big business have influenced national and international economies in the twentieth century. A path-breaking study, it provides the first systematic treatment of big business in advanced, emerging, and centrally planned economies from the late nineteenth century, when big businesses first appeared in American and West European manufacturing, to the present. These essays, written by internationally known historians and economists, help one to understand the essential role and functions of big businesses, past and present.

This book examines the development of television broadcasting in Japan, Hong Kong and South Korea. It explores the policy regimes guiding the development of television broadcasting as a powerful institution and the extent to which new forms of television have become part of each country's contemporary media mix. It analyses the interests involved in key policy decisions, the institutional dynamics promoting or inhibiting new media

markets, and the relative importance in the different countries of cable, satellite, digital broadcasting, and the use of the Internet for purposes associated with television broadcasting. The nature of television regimes in each of the three countries is very different, and the contrasting situations provide great insights into how television is developing, and how it could develop further, both in East Asia and worldwide.
