How do schools worldwide treat the Holocaust as a subject? Are representations of the Holocaust always accurate, balanced and unprejudiced in curricula and textbooks? This study compares representations of the Holocaust in school textbooks and national curricula. It highlights evolving practices worldwide and formulates recommendations that will help policy-makers provide the educational means by which pupils may develop Holocaust literacy.

Fuel cells are one of the cleanest and most efficient technologies for generating electricity. Since there is no combustion, there are none of the pollutants commonly produced by boilers and furnaces. For systems designed to consume hydrogen directly, the only products are electricity, water and heat. Fuel cells are an important technology for a potentially wide variety of applications including on-site electric power for households and commercial buildings; supplemental or auxiliary power to support car, truck and aircraft systems; power for personal, mass and commercial transportation; and the modular addition by utilities of new power generation closely tailored to meet growth in power consumption. These applications will be in a large number of industries worldwide. In this Seventh Edition of the Fuel Cell Handbook, we have discussed the Solid State Energy Conversion Alliance Program (SECA) activities. In addition, individual fuel cell

technologies and other supporting materials have been updated.

A Foundation for Analysis in the Health Sciences Wiley

The ability to analyze and interpret enormous amounts of data has become a prerequisite for success in allied healthcare and the health sciences. Now in its 11th edition, *Biostatistics: A Foundation for Analysis in the Health Sciences* continues to offer in-depth guidance toward biostatistical concepts, techniques, and practical applications in the modern healthcare setting. Comprehensive in scope yet detailed in coverage, this text helps students understand—and appropriately use—probability distributions, sampling distributions, estimation, hypothesis testing, variance analysis, regression, correlation analysis, and other statistical tools fundamental to the

science and practice of medicine. Clearly-defined pedagogical tools help students stay up-to-date on new material, and an emphasis on statistical software allows faster, more accurate calculation while putting the focus on the underlying concepts rather than the math. Students develop highly relevant skills in inferential and differential statistical techniques, equipping them with the ability to organize, summarize, and interpret large bodies of data. Suitable for both graduate and advanced undergraduate coursework, this text retains the rigor required for use as a professional reference.

Diversion Books

This book offers a new critical perspective on the perpetual problem of literature's relationship to reality and in particular on the sustained tension between literature and historiography. The scholarly and literary works of W.G. Sebald (1944–2001) serve as striking examples for this discussion, for the way in which they demonstrate the emergence of a new hybrid discourse of literature as historiography. This book critically reconsiders the claims and aims of historiography by re-evaluating core questions of the literary discourse and by assessing the ethical imperative of literature in the 20th and 21st centuries. Guided by an inherently interdisciplinary framework, this book elucidates the interplay of epistemological, aesthetic, and ethical concerns that define Sebald's criticism and fiction. Appropriate to the way in which Sebald's works challenge us to rethink the boundaries between discourses, genres, disciplines, and media, this work proceeds in a methodologically non-

dogmatic way, drawing on hermeneutics, semiotics, narratology, and discourse theory. In addition to contextualizing Sebald within postwar literature in German, the book is the first English-language study to consider Sebald's oeuvre as a whole. Of interest for Sebald experts and enthusiasts, literary scholars and historians concerned with the problematic of representing the past.

The handbook centers on detection techniques in the field of particle physics, medical imaging and related subjects. It is structured into three parts. The first one is dealing with basic ideas of particle detectors, followed by applications of these devices in high energy physics and other fields. In the last part the large field of medical imaging using similar detection techniques is described. The different chapters of the book are written by world experts in their field. Clear instructions on the detection techniques and principles in terms of relevant operation parameters for scientists and graduate students are

given. Detailed tables and diagrams will make this a very useful handbook for the application of these techniques in many different fields like physics, medicine, biology and other areas of natural science.

In My Brother's Shadow

John Wiley & Sons

A Place in the Country is W. G. Sebald's meditation on the six artists and writers who shaped his creative mind—and the last of this great writer's major works to be translated into English. This edition includes more than 40 pieces of art, all originally selected by W. G. Sebald. This extraordinary collection of interlinked essays about place, memory, and creativity captures the inner worlds of five authors and one painter. In his masterly and mysterious style—part critical essay, part memoir—Sebald weaves their lives and art with his own migrations and rise in the literary world. Here are people gifted with talent and courage yet in some cases cursed by fragile and unstable natures, working in countries inhospitable or even hostile to them. Jean-Jacques Rousseau is conjured on the verge of physical and mental

exhaustion, hiding from his detractors on the island of St. Pierre, where two centuries later Sebald took rooms adjacent to his. Eighteenth-century author Johann Peter Hebel is remembered for his exquisite and delicate nature writing, expressing the eternal balance of both the outside world and human emotions. Writer Gottfried Keller, best known for his 1850 novel *Green Henry*, is praised for his prescient insights into a Germany where “the gap between self-interest and the common good was growing ever wider.” Sebald compassionately re-creates the ordeals of Eduard Mörike, the nineteenth-century German poet beset by mood swings, depression, and fainting spells in an increasingly shallow society, and Robert Walser, the institutionalized author whose nearly indecipherable scrawls seemed an attempt to “duck down below the level of language and obliterate himself” (and whose physical appearance and year of death mirrored those of Sebald's grandfather). Finally, Sebald spies a cognizance of death's inevitability in painter Jan

Peter Tripp's lovingly exact reproductions of life. Featuring the same kinds of suggestive and unexplained illustrations that appear in his masterworks *Austerlitz* and *The Rings of Saturn*, and translated by Sebald's colleague Jo Catling, *A Place in the Country* is Sebald's unforgettable self-portrait as seen through the experiences of others, a glimpse of his own ghosts alongside those of the men who influenced him. It is an essential addition to his stunning body of work. Praise for *A Place in the Country* “Measured, solemn, sardonic . . . hypnotic . . . [W. G. Sebald's] books, which he made out of classics, remain classics for now.”—Joshua Cohen, *The New York Times Book Review* “In Sebald's writing, everything is connected, everything webbed together by the unseen threads of history, or chance, or fate, or death. The scholarly craft of gathering scattered sources and weaving them into a coherent whole is transformed here into something beautiful and unsettling, elevated into an art of the uncanny—an art that was, in the end, Sebald's strange and inscrutable

gift.”—Slate “Magnificent . . . The multiple layers surrounding each essay are seamless to the point of imperceptibility.”—New York Daily News “Sebald’s most tender and jovial book.”—The Nation “Reading [A Place in the Country is] like going for a walk with a beautifully talented, deeply passionate novelist from Mars.”—New York *Advanced English* Bloomsbury Publishing The weather on planet Earth is a vital and sometimes fatal force in human affairs. Efforts to control or reduce the harmful impacts of weather go back far in time. In this, the latest National Academies’™ assessment of weather modification, the committee was asked to assess the ability of current and proposed weather modification capabilities to provide beneficial impacts on water resource management and weather hazard mitigation. It examines new technologies, reviews advances in numerical modeling on the cloud and mesoscale, and considers how improvements in computer capabilities might be applied to weather modification.

Critical Issues in Weather Modification Research examines the status of the science underlying weather modification in the United States. It calls for a coordinated national research program to answer fundamental questions about basic atmospheric processes and to address other issues that are impeding progress in weather modification.

A Baseball Journey from Cuba to the Big Leagues and Back Quickstudy

A memoir by the mustachioed baseball pitcher who went playing rocky, trash-ridden fields in Castro's Cuba to becoming a Boston Red Sox legend. Luis Tiant is one of the most charismatic and accomplished players in Boston Red Sox and Major League Baseball history. With a barrel-chested physique and a Fu Manchu mustache, Tiant may not have looked like the lean, sculpted aces he usually played against, but nobody was a tougher competitor on the diamond, and few were as successful. There may be no more qualified twentieth-century pitcher not yet enshrined in the National Baseball Hall of Fame. His big-league dreams came at a price: racism in the Deep South and the Boston suburbs, and nearly fifteen years separated from a family held captive in Castro's Cuba. But baseball also delivered World Series stardom and a heroic return to his island home after close to a half-century of forced exile. The man whose name—"El Tiante"—became a Fenway Park

battle cry has never fully shared his tale in his own words, until now. In *Son of Havana*, Tiant puts his heart on his sleeve and describes his road from torn-up fields in Havana to the pristine lawns of major league ballparks. Readers will share Tiant's pride when appeals by a pair of US senators to baseball-fanatic Castro secure freedom for Luis's parents to fly to Boston and witness the 1975 World Series glory of their child. And readers will join the big-league ballplayers for their spring 2016 exhibition game in Havana, when Tiant—a living link to the earliest, scariest days of the Castro regime—threw out the first pitch.

The first edition of *Satellite Communications Systems Engineering* (Wiley 2008) was written for those concerned with the design and performance of satellite communications systems employed in fixed point to point, broadcasting, mobile, radio navigation, data relay, computer communications, and related satellite based applications. This

welcome Second Edition continues the basic premise and enhances the publication with the latest updated information and new technologies developed since the publication of the first edition. The book is based on graduate level satellite communications course material and has served as the primary text for electrical engineering Masters and Doctoral level courses in satellite communications and related areas.

Introductory to advanced engineering level students in electrical, communications and wireless network courses, and electrical engineers, communications engineers, systems engineers, and wireless network engineers looking for a refresher will find this essential text invaluable.
