By Robert V Hogg Probability By Robert V Hogg Probability Robert V. Hogg, Professor Emeritus of Statistics at the University of Iowa since 2001, received his B.A. in mathematics at the University of Illinois and his M.S. and Ph.D. degrees in mathematics, specializing in actuarial sciences and statistics, from the University of Iowa. Known for his gift of humor and his passion for teaching, Hogg has had far-reaching influence in the field of statistics. Amazon.com: Probability and Statistical Inference ... The convolution of probability distributions arises in probability theory and statistics as the operation in terms of probability distributions that corresponds to the addition of independent random variables and, by extension, to forming linear combinations of random variables. The operation here is a special case of convolution in the context of probability distributions. Front Page | Statistical Science - Duke University Background. Roughly, given a set of independent identically distributed data conditioned on an unknown parameter θ , a sufficient statistic is a function $T(x)$ whose value contains all the information needed to compute any estimate of the parameter (e.g. a maximum likelihood estimate). Due to the factorization theorem, for a sufficient statistic $T(x)$, the probability density can be written as Sufficient statistic - Wikipedia Pulmonary embolism (PE) is when a blood clot (thrombus) becomes lodged in an artery in the lung and blocks blood flow to the lung.
