Bee Venom Therapy The Apitherapy Way
To Health

A beekeeper and herbalist shares how you can use six products of the beehive: honey, pollen, propolis, royal jelly, beeswax, and bee venom. Not all new beekeepers realize that a honeybee hive produces a lot more than just honey. While your hard-working ladies will produce

delicious honey, the hive as a whole also produces pollen, propolis, royal jelly, beeswax, and bee venom; all very useful things for humans, if we know how to use them. The Benevolent Bee describes how and why the bees make these products, how they've been used by humans throughout the ages, and how beekeepers can harvest the products. It also presents simple do-it yourself recipes for using the products in health and wellness, body care, nutrition, and craft. You'll learn how to make salves for burns and a cough syrup from raw honey; how to make a

tincture, an infused oil, and a mouthwash from propolis, the anti-bacterial "bee glue" that lines the inside of the hive; and much more. Get crafting now, it's all already in your hive!

HEALING LYME WITH BEE VENOM THERAPY
There is a ride in Disneyworld that shrinks a doctor down to a microscopic level and injects her into the bloodstream of a patient to find and heal the chronic illness. But we don't have to wait for medical science to catch up with Disneyworld. We each have an inner physician within us who has gone to sleep, like Rip Van Winkle. It is imperative for Lyme patients (especially Late Stage/Chronic Lyme) to wake up their own inner physician. If this were an easy task, we would already have remedies for Lyme and many other chronic conditions. But waking up that inner physician is not so easy. You cannot just kiss Sleeping Beauty and wake her up. Bee venom is the only natural substance I know of that really wakes up this physician in such a powerful way that it cannot be ignored or go back to sleep. Since bee venom is a poison, a toxic substance, its entrance into the body creates an emergency situation and forces the body to go through a cascade of reactions. In the process it cleans up any

underlying conditions. The melittin in bee venom must kill the Lyme spirochetes that are hiding out deep inside the body.

Curative Properties of Honey and Bee Venom Honeybee Health Products

Bee venom and its melittin fraction were shown to have antibacterial activity against a penicillin-resistant strain of *Staph aureus* (strain 80). This activity of bee venom and melittin was demonstrated by a method similar to that used for plate sensitivity tests. Both whole bee venom and its melittin fraction were also able to inhibit the growth of 20 of the 30 different bacterial organisms tested. More Gram positive organisms (86%) were sensitive to bee venom and to melittin than Gram negatives (46%). The antibacterial activity of bee venom and melittin were of the same magnitude. The zones of inhibition created by bee venom and melittin were compared with those caused by penicillin, and the equivalent units of penicillin were computed. The antibiotic potency of a single bee sting was also determined. Among the Gram positives, the antibacterial effect of a 1:10 dilution of whole liquid bee venom was equal to that of penicillin at a concentration of 0.093 to 17.0 units/ml. The same dilution of bee venom when tested against Gram negative organisms compared to a higher range of penicillin values-93 to 1,700 units/ml.

Medical Application of Bee Venom
For more than sixty years Charles Mraz has brought the benefits of apitherapy (bee-venom therapy) to thousands of individuals. He pioneered the use of this technique to treat autoimmune diseases, particularly arthritis and multiple sclerosis.

Biochemical, Pharmacological and Behavioural Aspects
For centuries honey has been regarded as a wonderful gift of nature in which the properties of an excellent food, beneficial alike to adults and children, are combined with medicinal properties. Ancient Russian manuscripts attached great importance to honey as a medicine. Popular medicine has successfully used it for many diseases from time immemorial. The results of

experiments and observations made by the medical science in recent decades have proved that honey is an important medicine possessing many-sided therapeutic properties. Honey is very effective in the treatment of some pathological conditions of the intestinal tract, the respiratory organs, the heart, and the nerves. The knowledge that bee venom possesses medicinal properties has come down to us from remote antiquity. Written evidence, as well as the observations of many beekeepers and our own long experience, confirm the effectiveness of been venom in the treatment of rheumatic fever, neuritis and some other diseases. Honey and bee venom treatment must be carried on under the supervision of a physician and can be made a component part in a complex of curative measures for many diseases.
