Have you ever . . . Invested time in something that, in hindsight, just wasn't worth it? Paid too much in an eBay auction? Continued to do something you knew was bad for you? Sold stocks too late, or too early? Taken credit for success, but blamed failure on external circumstances? Backed the wrong horse? These are examples of what the author calls cognitive biases, simple errors all of us make in day-to-day thinking. But by knowing what they are and how to identify them, we can avoid them and make better choices: whether in dealing with personal problems or business negotiations, trying to save money or earn profits, or

merely working out what we really want in life—and strategizing the best way to get it. Already an international bestseller, *The Art of Thinking Clearly* distills cutting-edge research from behavioral economics, psychology, and neuroscience into a clever, practical guide for anyone who's ever wanted to be wiser and make better decisions. A novelist, thinker, and entrepreneur, Rolf Dobelli deftly shows that in order to lead happier, more prosperous lives, we don't need extra cunning, new ideas, shiny gadgets, or more frantic hyperactivity—all we need is less irrationality. Simple, clear, and always surprising, this indispensable book will change the way you think and transform your decision making—at work, at home, every day. From why you shouldn't accept a free drink to why you should walk out of a movie you don't like, from why it's so hard to predict the future to why you shouldn't watch the news, *The Art of Thinking Clearly* helps solve the puzzle of human reasoning.

In the last two decades, amid the global spread of smartphones, state killings of civilians have increasingly been captured on the cameras of both bystanders and police. Screen Shots studies this phenomenon from the vantage point of the Israeli occupation of Palestinian territories. Here, cameras have proliferated as political tools in the hands of a broad range of actors and institutions, including Palestinian activists, Israeli soldiers, Jewish settlers, and human rights workers. All trained their lens on Israeli state violence, propelled by a shared dream: that advances in digital photography—closer, sharper, faster—would advance their respective political agendas. Most would be let down. Drawing on ethnographic work, Rebecca L. Stein chronicles Palestinian video-activists seeking justice, Israeli soldiers laboring to perfect the military's image, and Zionist conspiracy theorists accusing Palestinians of "playing dead." Writing against techno-optimism, Stein investigates what camera dreams and disillusionment across these political divides reveal about the Israeli and Palestinian colonial present, and the shifting terms of power and struggle in the smartphone age.

Playing Pool - The Missing Manual *The 99 Critical Shots in Pool* Everything You Need to Know to Learn and Master the Game A dramatically new understanding of human history, challenging our most fundamental assumptions about social evolution—from the development of agriculture and cities to the origins of the state, democracy, and inequality—and revealing new possibilities for human emancipation. For generations, our remote ancestors have been cast as primitive and childlike—either free and equal innocents, or thuggish and warlike. Civilization, we are told, could be achieved only by sacrificing those original freedoms or, alternatively, by taming our baser instincts. David Graeber and David Wengrow show how such theories first emerged in the eighteenth century as a conservative reaction to powerful critiques of European society posed by Indigenous observers and intellectuals. Revisiting this encounter has startling implications for how we make sense of human history today, including the origins of farming, property, cities, democracy, slavery, and civilization itself. Drawing on pathbreaking research in archaeology and anthropology, the authors show how history becomes a far more interesting place once we learn to throw off

our conceptual shackles and perceive what's really there. If humans did not spend 95 percent of their evolutionary past in tiny bands of hunter-gatherers, what were they doing all that time? If agriculture, and cities, did not mean a plunge into hierarchy and domination, then what kinds of social and economic organization did they lead to? The answers are often unexpected, and suggest that the course of human history may be less set in stone, and more full of playful, hopeful possibilities, than we tend to assume. The Dawn of Everything fundamentally transforms our understanding of the human past and offers a path toward imagining new forms of freedom, new ways of organizing society. This is a monumental book of formidable intellectual range, animated by curiosity, moral vision, and a faith in the power of direct action. Includes Black-and-White Illustrations

101 Big Pool Shots is the Only instructional book that displays the most important shots that keep coming up game after game; and how to deal with them. It does this by using "easy to learn diagrams" and precise instructions about where and how to stroke the cue ball. Each diagram is on a full-page along with the cue ball and a short text explaining proper execution. The diagrams show the situation before the stroke, and the table lay out after the stroke. Each of these 101 Big Shots will accelerate learning for all players in a practical way, right on the table with immediate feedback! By mastering any of the Big Shots, you will be able to see and create family members of that shot. This will put you on the fast track to start thinking and playing like a Professional. There is a chapter of 14 full-page powerful Practice Routines. Gerry, along with other champions use these in their practice. The 4 Road Stories, along with the photos & bios of Legendary Players offer a window into the lives and experiences of Professional Players.

In 1900, for every 1,000 babies born in the United States, 100 would die before their first birthday, often due to infectious diseases. Today, vaccines exist for many viral and bacterial diseases. The National Childhood Vaccine Injury Act, passed in 1986, was intended to bolster vaccine research and development through the federal coordination of vaccine initiatives and to provide relief to vaccine manufacturers facing financial burdens. The legislation also intended to address concerns about the safety of vaccines by instituting a compensation program, setting up a passive surveillance system for vaccine adverse events, and by providing information to consumers. A key component of the legislation required the U.S. Department of Health and Human Services to collaborate with the Institute of Medicine to assess concerns about the safety of vaccines and potential adverse events, especially in children. Adverse Effects of Vaccines reviews

the epidemiological, clinical, and biological evidence regarding adverse health events associated with specific vaccines covered by the National Vaccine Injury Compensation Program (VICP), including the varicella zoster vaccine, influenza vaccines, the hepatitis B vaccine, and the human papillomavirus vaccine, among others. For each possible adverse event, the report reviews peer-reviewed primary studies, summarizes their findings, and evaluates the epidemiological, clinical, and biological evidence. It finds that while no vaccine is 100 percent safe, very few adverse events are shown to be caused by vaccines. In addition, the evidence shows that vaccines do not cause several conditions. For example, the MMR vaccine is not associated with autism or childhood diabetes. Also, the DTaP vaccine is not associated with diabetes and the influenza vaccine given as a shot does not exacerbate asthma. Adverse Effects of Vaccines will be of special interest to the National Vaccine Program Office, the VICP, the Centers for Disease Control and Prevention, vaccine safety researchers and manufacturers, parents, caregivers, and health professionals in the private and public sectors.
