As anti-globalization and geopolitical tensions continue to rise, the use of local content requirements (LCRs) around the world has become more noticeable than ever before. The reasons for adopting LCRs range from ensuring domestic supply availability, job creation, and increasing value added to safeguarding national security. Ing and Grossman examine country-specific as well as firm-product level exercises to explain how LCRs reduce fair competition, resulting in lower trade and productivity, which ultimately lowers world economic output and overall human welfare. Countries around the world are investigated with specific attention to the US, China, Indonesia, and resource-intensive countries, including mining-intensive ones. The book also presents product- and firm-level analyses, answering the question of why countries adopted LCRs and how LCRs actually affect the world economy. This book is a useful resource that will interest policymakers, researchers, and advanced undergraduates

interested in international trade, industrial policy, political economy, labour economics, and development economics.

This handbook series includes several naturally occurring chemicals that exhibit biological activity. These chemicals are derived from plants, insects, and several microorganisms. Volume I of this series covers the theory and practice of the strategies for pest control and methods for detection. Moreover, it presents extensive tables that provide the information you need to select the most appropriate bioassay for a particular plant growth regulator or hormone. In addition to the chapters on bioassays, Volume I provides a solid introduction to the theory and practice of natural pesticide use, including in-depth discussions of integrated management systems for weed and pest control, the state-of-the-art use of computers in pest management, and allelochemicals as natural protection. Guidelines on toxicological testing and EPA regulation of natural pesticides are also detailed.

[Application of Systems Engineering in Installation Process for the Service Industry](#) CRC Press

Abstract: The service industry and installation companies in the United States are governed by different standards related to the installation field. This thesis focuses on flooring installation for the service providers. It is governed by American Standard Test Method (ASTM) regulations, the American National Standard Institute (ANSI) and the Tile Council of America (TCA) handbook. Although the named standards offer beneficial technical requirements to the installation, they do not specify methods to conduct the installation processes effectively and maintain traceability from the installation requirements to the final services. Systems engineering approaches, such as requirements derivation, functional analyses, verification and validation, technical reviews and technical performance measurement, are used in this thesis to create innovative operational processes for the service providers, especially for the flooring industry, to eliminate drawbacks such as customer dissatisfaction, re-installation, miscommunications, and in addition, to increase the efficiency and quality of installations.

Bringing together leading experts from across the UK and Europe, this book provides a comprehensive analysis of the impact of Brexit on the energy sector in the UK and in the European Union and its Member States. In recent decades, the trend within the EU has been towards greater integration and liberalisation of energy markets. Through the development of the Union's internal energy market and the funding of cross-border energy infrastructure, EU membership facilitates cross-border trade in energy, promotes security of energy supply, and, via the European Atomic Energy Community (Euratom), allows EU Member States to trade in nuclear material for energy production. Brexit changes all of this. The significant level of integration and interdependence in EU energy policy means that the UK's departure from the Union poses many challenges for the UK, the EU, and EU Member States. While certain energy-related arrangements have been addressed, the relationship between the UK and EU in the energy sector has been changed fundamentally. In this context, important and interrelated questions arise, such as the following: Under what terms will energy trading between the EU and UK now take place? What access will the UK have to EU energy markets? What does Brexit mean for the security of energy supply? What does the UK's departure from Euratom mean for nuclear research? Can the crossborder single energy market (SEM) on the island of Ireland continue following Brexit? What implications does Brexit have for renewables, the environment, and climate change? Brexit comes at a time when the European energy sector is undergoing the processes of decarbonisation and energy transition. This book offers researchers, legal practitioners, and policy advisers in-depth understanding of the interplay between these challenges and Brexit.

This book brings together academics and experts on Turkish network industries. It provides fundamental information on the current developments regarding regulation of the different network industries in Turkey. Turkey has gone through a liberalization process in most of the network industries during the past 20 years. In most of them, independent regulatory authorities have been established, but some network industries are still remaining under the central or local government regulatory regime. As a result, there is now a very complicated regulatory regime in place which makes Turkey's regulatory system difficult to understand for practitioners, academics, lawyers, researchers and investors. This book offers unique insight into Turkey's regulatory regime in various network industries. It also offers a historical background to regulation, a description of the current regulatory regimes, as well as an analysis of the foreseeable evolutions. The book covers all the important network industries in Turkey. No similar book is available on the market to date. Moreover, the book provides an extensive analysis of the current regulatory regimes in the energy, the transport, and the telecommunications industries. This book should be of interest to anyone wishing to understand Turkish regulation and will be very helpful handbook to researchers who are interested in regulation of network industries not only in Turkey but also in other developing countries, as Turkey is quite representative of other emerging countries. Readers will acquire a thorough understanding of the state of play of the Turkish network industries and their regulation.
